Preface **v**

Abstract **vii**

Contents **ix**

List of Figures **xii**

List of Tables **xvi**

Symbols **xvii**

1 Introduction **1**
1.1 Wetting fundamentals 1
1.1.1 Droplet spreading 1
1.1.2 Liquid imbibition into single pore 5
1.1.3 Penetration into pore network 8
1.2 Capillary wetting into food powders 12
1.2.1 Reconstitution of food powder 12
1.2.2 Wetting step as rate limitation 14
1.2.3 Heterogeneity due to geometry 15
1.2.4 Heterogeneity due to surface composition 16
1.2.5 Dissolution and swelling during wetting 18
1.3 Modelling of the reconstitution process 20
1.3.1 Modelling the wetting step 21
1.3.2 Modelling of dissolution 24
1.3.3 Modelling of dissolution during capillary wetting 26
1.4 Objectives based on state of the art 27

2 Experimental methods **29**
2.1 Analysis of powder properties 29
2.2 Surface modification techniques and analysis methods 30
2.2.1 Cleaning of glass material 30
2.2.2 Silanization of glass material 30
2.2.3 Fluidized bed coating 30
2.2.4 Spin coating 31
2.2.5 Tablet pressing 32

Dieses Werk ist copyrightgeschützt und darf in keiner Form vervielfältigt werden noch an Dritte weitergegeben werden.
Es gilt nur für den persönlichen Gebrauch.

2.2.6 Manufacturing of thin layers . . . 32
2.2.7 Particle shape and surface roughness . . . 33
2.3 Contact angle determination . . . 33
2.4 Single gap setup . . . 34
2.5 Washburn experiment . . . 34

3 Results of material characterization 36
3.1 Composition of powders . . . 36
3.2 Shape and surface of particles . . . 37
3.3 Characterization of powder properties . . . 42
3.3.1 Powder properties of inert systems . . . 42
3.3.2 Powder properties of food systems . . . 44
3.3.2.1 Homogeneous food powders . . . 44
3.3.2.2 Heterogeneous food powders . . . 48
3.3.3 Powder properties of mixed systems . . . 49
3.3.3.1 Mixture of sucrose and hydrophobic glass . . . 50
3.3.3.2 Mixture of sodium chloride and shellac coated glass . . . 51
3.4 Characterization of liquid properties . . . 52
3.5 Solid-liquid interactions . . . 52
3.5.1 Interactions in inert systems . . . 52
3.5.2 Interactions in food systems . . . 54
3.5.2.1 Homogeneous food powders . . . 55
3.5.2.2 Heterogeneous food powders . . . 57
3.5.3 Interactions in mixed systems . . . 58
3.5.3.1 Sucrose and hydrophobic glass mixtures . . . 58
3.5.3.2 Sodium chloride and shellac coated glass mixtures . . . 59

4 Model description 60
4.1 Model for inert, heterogeneous system . . . 60
4.2 Model for soluble, heterogeneous food system . . . 61

5 Capillary wetting into inert systems 66
5.1 Liquid penetration into single gaps . . . 66
5.2 Liquid penetration into powder systems . . . 68
5.2.1 Influence of heterogeneous, coarse powder on penetration rate . . . 68
5.2.2 Influence of heterogeneous, fine powder on penetration rate . . . 70
5.2.3 Modelling of heterogeneous penetration . . . 72

6 Capillary wetting into food systems 76
6.1 Penetration into homogeneous systems . . . 76
6.1.1 Influence of viscosity development on penetration rate . . . 76
6.1.2 Influence of particle size on penetration rate . . . 83
6.2 Penetration into heterogeneous systems . . . 89
6.2.1 Effect of viscosity and heterogeneity on liquid penetration . . . 89
6.2.2 Effect of dissolution and heterogeneity on liquid penetration . . . 94
6.2.3 Comparison of food with inert systems . . . 98
6.3 Combined factors in real food system . . . 101
6.4 Model for prediction of capillary wetting . . . 104

Dieses Werk ist copyrightgeschützt und darf in keiner Form vervielfältigt werden noch an Dritte weitergegeben werden.
Es gilt nur für den persönlichen Gebrauch.

6.4.1 Numerical study of the sensitivity of wetting factors 104
6.4.1.1 Influence of contact angle 105
6.4.1.2 Influence of dissolution area 106
6.4.1.3 Influence of pore network properties 107
6.4.2 Approaches for improvement of the model 109
6.4.3 Application of model from an industry perspective 112

7 Conclusion 114
7.1 Inert systems 114
7.2 Soluble systems 115

A Sodium chloride 117

B Sucrose and hydrophobic glass 119

C Sodium chloride and shellac coated glass 120

D Determination of change of pore network 122

Bibliography 123
