2.6. Effect of microbial phytase on nutrient digestibility and animal performance 23
2.6.1. Effect of microbial phytase on nutrient digestibility 23
2.6.2. Effect of microbial phytase on pig performance 24

2.7. Effect of microbial phytase on P surplus in the environment 25
2.7.1. Environmental effects of phosphorus 25
2.7.2 Effect of microbial phytase on phosphorus excretion in pigs 27

2.8. Conclusion 29

3. EXPERIMENTS 1-4: STUDIES ON PHOSPHORUS AVAILABILITY IN PROTEIN RICH PLANT FEEDSTUFFS:SOYBEAN MEAL (EXP. 1) AND SUNFLOWER MEAL (EXP. 2) AND ENERGY RICH PLANT FEEDSTUFFS:CORN (EXP. 3) AND RICE BRAN (EXP. 4) FED WITHOUT AND WITH PHYTASE SUPPLEMENT TO GROWING PIGS 30

3.1. Objectives 30
3.2. Materials and Methods 30
3.2.1. Experimental animals and housing 30
3.2.2. Design of experiments 31
3.2.3. Experimental feeds and feeding procedure 31
3.2.4. Measurements 32
3.2.5. Chemical analyses 38
3.2.6. Digestibility calculations 38
3.2.7. Statistical analysis 41

3.3. Results from preliminary experiment 41
3.3.1. Chemical analyses of experimental diets 41
3.3.2. Phosphorus intake, excretion and digestibility 41

3.4. Results from experiment 1 42
3.4.1. Chemical analyses of experimental diets 42
3.4.2. Phosphorus intake and excretion 43

3.4.3. Phosphorus absorption, retention and digestibility..... 43

3.5. Results from experiment 2 45

3.5.1. Chemical analyses of experimental diets 45

3.5.2. Phosphorus intake and excretion 46

3.5.3. Phosphorus absorption, retention and digestibility..... 48

3.6. **Results from experiment 3** 49

3.6.1. Chemical analyses of experimental diets 49

3.6.2. Phosphorus intake and excretion 49

3.6.3. Phosphorus absorption, retention and digestibility..... 50

3.7. Results from experiment 4 52

3.7.1. Chemical analyses of experimental diets 52

3.7.2. Phosphorus intake and excretion 52

3.7.3. Phosphorus absorption, retention and digestibility..... 53

3.8. Discussion for experiments 1-4..... 54

3.9. Conclusion for experiments 1-4..... 59

4. EXPERIMENT 5: THE EFFECTS OF FEEDING DIETS WITH NORMAL AND LOW PHOSPHORUS CONTENTS SUPPLEMENTED WITH PHYTASE ON PHOSPHORUS EXCRETION IN GROWING PIGS..... 60

4.1. Objectives 60

4.2. Materials and Methods 60

4.2.1. Experimental animals 60

4.2.2. Design of experiment.. 60

4.2.3. Experimental feeds and feeding procedure 61

4.2.4. Measurements 61

4.2.5. Chemical analyses 63

4.2.6. Data calculations..... 63

4.2.7. Statistical analysis..... 64

4.3. Results 64
4.3.1. Chemical analyses of experimental diets 64
4.3.2. Phosphorus intake and excretion 64
4.3.3. Phosphorus absorption, retention and digestibility 65

4.4. Discussion 68

4.5. Conclusion 70

5. EXPERIMENT 6: THE EFFECTS OF FEEDING DIETS WITH NORMAL AND LOW PHOSPHORUS CONTENTS SUPPLEMENTED WITH PHYTASE ON PRODUCTIVE PERFORMANCE IN GROWING-FINISHING PIGS 71

5.1. Objectives 71
5.2. Materials and Methods 71
5.2.1. Experimental animals 71
5.2.2. Design of experiment 71
5.2.3. Experimental feeds and feeding procedure 72
5.2.4. Measurements 72
5.2.5. Statistical analysis 73

5.3. **Results** 75
5.3.1. Chemical analyses of experimental diets 75
5.3.2. Productive performance of growing pigs (30-60 kg BW) 75
5.3.3. Productive performance of finishing pigs (60-90 kg BW) 77
5.3.4. Productive performance of growing-finishing pigs (30-90 kg BW) 77
5.3.5. Carcass characteristics of slaughtered pigs 78
5.3.6. Ash and P content in bones of slaughtered pigs 79

5.4. Discussion 80

5.5. Conclusion 84

6. GENERAL DISCUSSION AND RECOMMENDATIONS FOR FUTURE WORK…… ….85

6.1. General discussion…….. ….85

6.2. Conclusions…… ….90

6.3. Recommendations for future work…….. ….90

7. SUMMARY…… ….91

9. APPENDICES…… ….108

LIST OF TABLES

		Page
Table 2.1.	Total phosphorus and phytate-P concentration in selected feedstuffs	7
Table 2.2.	P digestibility coefficients (% of intake) of some feedstuffs of plant origin for pigs	8
Table 2.3.	Phosphorus concentration and bioavailability in macro mineral sources (data on as-fed basis)	9
Table 2.4.	Endogenous phytase activity of some feed ingredients	18
Table 2.5.	Effect of phytase supplement on growth performance and apparent digestibility of energy, nitrogen and mineral in growing-finishing pigs	26
Table 2.6.	Phosphorus balance of piglets (15 kg LW) without and with 1000 U phytase supplementation kg^{-1} diet	28
Table 2.7.	Mean excretion of P of growing-finishing pigs from 25 to 110 kg in the Netherlands	28
Table 3.1.	Feed ingredients (g kg^{-1} as-fed basis) and the calculated contents of diets in preliminary experiment	33
Table 3.2.	Feed ingredients (g kg^{-1} as-fed basis) and the calculated contents of diets in experiment 1	34
Table 3.3.	Feed ingredients (g kg^{-1} as-fed basis) and the calculated contents of diets in experiment 2	35
Table 3.4.	Feed ingredients (g kg^{-1} as-fed basis) and the calculated contents of diets in experiment 3	36
Table 3.5.	Feed ingredients (g kg^{-1} as-fed basis) and the calculated contents of diets in experiment 4	37
Table 3.6.	Composition (g kg^{-1}DM) of experimental diets in preliminary experiment	41
Table 3.7.	The effect of phytase SP 1002 on P balance in experimental diets and P digestibility of cassava in growing pigs	42
Table 3.8.	Composition (g kg^{-1}DM) of experimental diets in experiment 1	42
Table 3.9.	The effect of phytase SP 1002 on P balance in experimental diets and P digestibility of SBM in growing pigs	44
Table 3.10.	Composition (g kg^{-1}DM) of experimental diets in experiment 2	46
Table 3.11.	The effect of phytase SP 1002 on P balance in experimental diets and P digestibility of SFM in growing pigs	47
