Table of Contents

1. Introduction and Motivation 1

2. Theoretical Background 7

2.1. Basic concepts of solar cells 7

2.1.1. Semiconductor-metal/semiconductor junctions 7

2.1.2. Physical processes in the solar cell junction 10

2.1.3. The equivalent circuit for the solar cell 12

2.1.4. Basic parameters of a solar cell 14

2.1.5. Parasitic resistances 16

2.2. Cu_2O as an earth abundant material for photovoltaics 17

2.2.1. Crystal structure and lattice parameters of Cu_2O 17

2.2.2. Phonons and band structure of Cu_2O 18

2.2.3. Other properties of Cu_2O 20

2.2.4. Fabrication approaches for Cu_2O nanostructures and thin films 22

2.2.5. Applications of Cu_2O 26

2.2.6. Previous work on electrodeposited Cu_2O thin films for PV 27

2.3. Aluminum-doped zinc oxide (AZO) as a window layer material 31

3. Experimental Techniques 33

3.1. Electrochemical Deposition (ED) 33

3.1.1. Basics of Electrodeposition 33

3.1.2. Modes of Electrodeposition 38

3.2. Direct Current (DC) Magnetron Sputtering 39

3.3. Characterization Techniques 40

3.3.1. Scanning Electron Microscopy (SEM) 40

3.3.2. Raman Spectroscopy 41

3.3.3. Electron Beam Induced Current (EBIC) 43

3.3.4. Current–Voltage (I-V) Measurement 44

3.3.5. Capacitance –Voltage(C-V) Measurement 44

3.3.6. External Quantum Efficiency (EQE) Measurements 46

4. Fabrication and characterization of p-Cu_2O/AZO heterojunctions 47

4.1. Substrates 47

4.2. Electrodeposition of Cu_2O thin films 47

4.2.1. Potentiostatic and galvanostatic modes of electrodeposition 49

4.2.2. The junction between Au and Cu_2O 51

Es gilt nur für den persönlichen Gebrauch.

4.3. Sputtering of Al doped ZnO (AZO) layer 52
4.4. Optical lithography and wet chemical etching 52
4.5. Effect of electrodeposition modes on the solar cells properties 54
4.5.1. Raman and SEM results 54
4.5.2. I-V results 56
4.5.3. EQE and C-f results 59
4.6. Effect of the deposition time on the film thickness and the solar cells properties 62
4.6.1. SEM and Raman results 63
4.6.2. I-V results 65
4.6.3. Reflectivity results 69
4.6.4. EQE and C-V results 70

5. Illumination time and temperature dependences of the devices 73
5.1. Illumination time dependence of the devices 73
5.2. Temperature dependence of the devices 75
5.2.1. I-V results 75
5.2.2. C-V results 81

6. Flexible p-Cu_2O/ZnO/AZO heterojunction device 83
6.1. Flexible solar cells 83
6.2. Device fabrication 84
6.3. ALD process to insert ZnO thin film as buffer layer 84
6.4. Device characterization 87
7. Summary 95
8. List of References 101
9. Publications and conference contribution 117
Acknowledgement 118
Biography 120
