1	INTRODUCTION	1
2	THEORETICAL BACKGROUND	3
2.1	Macrophages	3
2.1.1	The mononuclear phagocyte system	4
2.1.1.1	Monocytes and monocyte-derived macrophages	5
2.1.1.2	Macrophage activation during inflammation	9
2.1.1.2.1	Classically activated macrophages	9
2.1.1.2.2	Alternatively activated macrophages	12
2.1.1.2.3	Functional plasticity of activated macrophages	14
2.1.2	Microbicidal activity – effector function of M1 macrophages	15
2.1.2.1	Reactive oxygen / nitrogen species	15
2.1.2.2	NADPH oxidase	16
2.1.2.2.1	Structure of the NADPH oxidase	17
2.1.2.2.2	Activation of the NADPH oxidase	18
2.1.2.3	Nitric oxide synthase	20
2.1.2.4	Killing mechanisms	21
2.1.2.5	Clinical importance	22
2.1.2.6	Excursus: Reactive oxygen species as ligands for cell signaling	24
2.1.3	Determination of the microbicidal potential – practical aspects	25
2.1.3.1	Cell isolation, purification and differentiation	25
2.1.3.2	Induction of reactive oxygen species production	29
2.1.3.3	Investigation of reactive oxygen species production	30
2.1.3.4	Available assays	31
2.1.4	Summary	32
2.2	Psychological stress	33
2.2.1	Psychological definition of stress	33
2.2.2	Psychobiological stress response systems	37
2.2.2.1	Hypothalamus-pituitary-adrenal axis	37
2.2.2.1.1	Anatomy, physiology, and cortisol	37
2.2.2.1.2	Methodological impacts for cortisol assessment	39

2.2.2.2	Sympathetic nervous system	40
2.2.2.2.1	Anatomy, physiology, and catecholamines	40
2.2.2.2.2	Methodological impacts for catecholamine assessment	42
2.2.3	Summary	43
2.3	Skin wound healing	44
2.3.1	Anatomy of the skin	44
2.3.2	Normal wound healing	45
2.3.2.1	Phase I: Hemostasis	45
2.3.2.2	Phase II: Inflammation	46
2.3.2.3	Phase III: Proliferation	47
2.3.2.4	Phase IV: Remodeling	48
2.3.3	Impaired wound healing	49
2.3.4	Summary	50
2.4	Stress, macrophages and wound healing	52
2.4.1	Influence of psychological stress on monocytes / macrophages	52
2.4.1.1	Influence of catecholamines on monocytes / macrophages	53
2.4.1.2	Influence of glucocorticoids on monocytes / macrophages	56
2.4.1.3	Influence of psychological stress on the microbicidal potential of monocytes / macrophages	60
2.4.2	Significance of macrophages in wound healing	60
2.4.3	Influence of psychological stress on wound healing	62
2.4.4	Summary	64
2.5	Conclusion, aims of the study and hypothesis	65
3	EMPIRICAL STUDIES	67
3.1	A simple in vitro method to investigate the microbicidal potential of human macrophages	67
3.1.1	Introduction	67
3.1.2	Materials and methods	68
3.1.2.1	Reagents and chemicals	68
3.1.2.2	Participants and procedure	69
3.1.2.3	The WST-1 macrophage assay, an in vitro method for assessing macrophage microbicidal potential	70
3.1.2.3.1	Monocyte isolation by adherence after Ficoll purification of PBMCs	70
3.1.2.3.2	Differentiation of human monocytes into macrophages and their separation	70
3.1.2.3.3	WST-1 assay to determine superoxide anion production	71
3.1.2.4	Assay implementation and validation procedures	71
3.1.2.4.1	Identification and verification of macrophage superoxide anion production stimulating agents	71

3.1.2.4.2	Validation of macrophage superoxide anion production by generation of electrical current	72
3.1.2.5	Statistical analysis	73
3.1.3	Results	73
3.1.3.1	Identification and verification of macrophage superoxide anion production stimulating agents	73
3.1.3.2	WST-1 macrophage assay implementation results	75
3.1.3.3	Assay validation by current generation	76
3.1.4	Discussion	77
3.2	Acute stress reduces microbicidal potential of ex vivo isolated human monocyte-derived macrophages	79
3.2.1	Introduction	79
3.2.2	Methods and materials	82
3.2.2.1	Participants	82
3.2.2.2	Experimental protocol	82
3.2.2.3	WST-1 macrophage assay	84
3.2.2.4	Stress hormone assays	85
3.2.2.5	Statistical analysis	85
3.2.3	Results	88
3.2.3.1	Characteristics of the two subject groups	88
3.2.3.2	Validation check of the neuroendocrine stress response	90
3.2.3.3	Stress reactivity of WST-1 reduction by macrophages	92
3.2.3.4	Mediation of WST-1 reduction by stress hormone changes	93
3.2.4	Discussion	94
4	DISCUSSION	101
4.1	Summary of the results	101
4.1.1	A simple in vitro method to investigate the microbicidal potential of human macrophages	101
4.1.2	Acute stress reduces the microbicidal potential of ex vivo isolated human monocyte-derived macrophages	102
4.2	Discussion of the results	103
4.3	Methodological reflection	106
4.4	Conclusion and directions for future studies	107
