Acknowledgment	iii
Zusammenfassung	v
Abstract	vii
1 Introduction	11
1.1 Motivation	11
1.2 Scope of the dissertation.....	14
2 Diamond substrate properties	17
2.1 Characterization of chemical vapor deposition (CVD) and ultrananocrystalline diamond (UNCD)	17
2.1.1 Mechanical properties	19
2.1.2 Surface characterization	20
2.1.3 Thermal conductivity	22
3 Thermal resistance of HBTs	27
3.1 Measurements and extraction methods of thermal resistance.....	30
4 Electrical and thermal via connection through the diamond layer	33
4.1 Process flow in the transferred diamond process.....	33
4.2 Development of a diamond adhesive wafer bonding process	38
4.2.1 Types of wafer bonding process	38
4.2.2 Characterization of the wafers before the bonding process	43
4.2.3 Wafer bond process	44
4.2.4 Diamond bond results	48
4.3 Removal of silicon: handle wafer.....	50
4.4 Via holes etch process	56
4.4.1 Direct etching on CVD and UNCD diamond wafers with an Aluminum hard mask	56
4.4.2 Via etching through the diamond and BCB after adhesive wafer bonding.....	59
4.4.3 Development of metallization through the diamond	64
4.5 Summary.....	68

5 Full process integration and realization of diamond heat – sink InP HBT MMICs.....	69
5.1 Layout adaptation	69
5.2 Processing of full InP HBT MMICs with integrated diamond layer	75
5.3 Characterization of diamond InP HBTs.....	85
5.3.1 PCM measurements.....	86
5.3.2 DC measurements of 0.8 μ m InP HBT devices	88
5.3.3 Determination of thermal resistance of 0.8 μ m InP HBT devices	91
5.3.4 RF measurement of the 0.8 μ m InP HBTs	94
5.4 Circuits measurements results	98
5.4.1 W-Band Power Amplifier (PA).....	98
5.5 Reproducibility.....	101
5.6 Summary.....	102
6 Summary	105
7 Outlook	107
Publications.....	108
Appendix	109
A Process flow	109
B. Acronyms	128
C. List of figures	130
D List of tables	134
Bibliography	135
