## TABLE OF CONTENTS

<b>1</b>	<b>General introduction and work hypothesis .....</b>	<b>2</b>
1.1	General introduction .....	2
1.2	Work hypothesis .....	3
1.3	References .....	3
<b>2</b>	<b>Use of pigs as a potential model for research into dietary modulation of the human gut microbiota .....</b>	<b>6</b>
2.1	Summary .....	6
2.2	Introduction .....	6
2.3	Anatomy of the gastrointestinal tract and body constitution – similarities and differences between humans and pigs .....	8
2.4	Intestinal microbiota of humans and pigs: microbial fermentation and composition .	9
2.4.1	The human gut microbiota: A brief overview .....	9
2.4.2	The porcine gut microbiota .....	11
2.4.3	Main determinants affecting intestinal microbiota composition.....	13
2.5	Role of the intestinal microbiota in host health and disease development and its dietary modulation in studies with pigs .....	16
2.5.1	Diarrhoea: occurrence after weaning in human infants and piglets .....	17
2.5.2	Necrotising enterocolitis .....	22
2.5.3	Obesity .....	25
2.6	Further options for the application of the pig as model in the research of microbiota-associated diseases .....	30
2.7	Possible improvement of the pig as an animal model: human flora-associated pigs	31
2.8	Conclusions .....	31
2.9	Acknowledgements .....	32
2.10	References .....	32

---

<b>3</b>	<b>Intestinal microbiota and microbial metabolites are changed in a pig model fed a high-fat/low-fiber or a low-fat/high-fiber diet .....</b>	<b>52</b>
3.1	Summary .....	52
3.2	Introduction .....	53
3.3	Materials and Methods .....	54
3.3.1	Ethical Approval .....	54
3.3.2	Animals and housing .....	54
3.3.3	Study design .....	55
3.3.4	Chemical and physical analyses .....	55
3.3.5	DNA extraction .....	56
3.3.6	Fingerprinting of bacterial DNA .....	56
3.3.7	Quantitative real-time PCR .....	57
3.3.8	Protein extraction and mass spectrometric analysis .....	57
3.3.9	Analyses of microbial metabolites .....	58
3.3.10	Statistical analyses of quantitative RT-PCR and microbial metabolite data ....	59
3.4	Results .....	60
3.4.1	General observations .....	60
3.4.2	Fingerprinting of bacterial DNA .....	62
3.4.3	Effect of diet composition on the total fecal microbiota .....	63
3.4.4	Effect of diet composition on the active fecal microbiota .....	68
3.4.5	Effect of diet composition on fecal microbial metabolites .....	70
3.5	Discussion .....	72
3.6	Acknowledgments .....	77
3.7	References .....	77
<b>4</b>	<b>Impact of a high-fat or high-fiber diet on intestinal microbiota and metabolic markers in a pig model .....</b>	<b>86</b>
4.1	Summary .....	86

---

4.2	Introduction .....	86
4.3	Materials and methods.....	88
4.3.1	Ethical approval.....	88
4.3.2	Animals and housing.....	88
4.3.3	Study design .....	88
4.3.4	Chemical and physical analysis.....	89
4.3.5	Blood analysis .....	89
4.3.6	DNA extraction .....	90
4.3.7	Quantitative real-time PCR.....	91
4.3.8	Analysis of microbial metabolites.....	92
4.3.9	Statistical analysis .....	94
4.4	Results .....	94
4.4.1	General observations.....	94
4.4.2	Effect of diet composition on carcass parameters.....	94
4.4.3	Effect of diet composition on cecal and colonic microbiota.....	95
4.4.4	Effect of diet composition on microbial metabolites in cecum and colon.....	96
4.4.5	Effect of diet on biochemical parameters in blood serum.....	97
4.5	Discussion.....	99
4.6	Conclusions .....	102
4.7	Acknowledgments .....	103
4.8	References .....	104
<b>5</b>	<b>General Discussion.....</b>	<b>114</b>
5.1	Introduction .....	114
5.2	Factors affecting gut microbiota and health markers in humans and pigs .....	115
5.3	Microbiota and the immune system.....	116
5.4	Interactions between colon cancer and microbiota.....	118
5.5	Food supplements – studies in humans and pigs.....	120

---

5.6	The pig as animal model: current research and potential improvements .....	121
5.7	Conclusion .....	123
5.8	Suggestion for further research.....	123
5.9	References .....	124
<b>6</b>	<b>Summary.....</b>	<b>132</b>
<b>7</b>	<b>Zusammenfassung.....</b>	<b>136</b>
<b>Appendix</b>	<b>.....</b>	<b>140</b>
