1. Introduction	1

PART I: THEORETICAL BACKGROUND

2. Hormonal Changes in Men Aged Over 40 Years	4
3. Biological Mechanisms Underlying Age-Related Hormonal Alterations.....	6
4. Consequences of Age-Related Hormonal Changes	8
4.1 Psychological Consequences: Well-being and Depression.....	8
4.2 Sexual Consequences: Erectile Function and Sexual Desire	11
4.3 Cognitive Consequences: Cognition and Dementia.....	13
4.4 Physical Consequences: Body Composition and Frailty.....	17
5. Clinical Implications	19
5.1 Hormone Replacement.....	19
5.2 General Health and Successful Aging.....	23
6. Conclusion, Research Questions and Hypotheses.....	25

PART II: EMPIRICAL STUDIES

7. The Rate of Change in Declining Steroid Hormones: A New Parameter of Healthy Aging in Men.....	30
7.1 Introduction	30
7.2 Results	31
7.3 Discussion	36
7.4 Methods.....	40
7.4.1 Participants	40

7.4.2	Procedure.....	41
7.4.3	Psychometric Tests.....	43
7.4.4	Endocrine Parameters.....	44
7.4.5	Potential Covariates and Confounders	45
7.4.6	Statistical Analysis	45
8.	Emotional Support, Depressive Symptoms and Age-Related Alterations in Male Body Composition	46
8.1	Introduction	46
8.2	Methods.....	47
8.2.1	Participants	47
8.2.2	Psychometric Measures.....	47
8.2.3	Body Composition.....	48
8.2.4	Potential Covariates and Confounders	48
8.2.5	Statistical Analysis	48
8.3	Results	48
8.3.1	Emotional support	49
8.3.2	Depressive symptoms.....	53
8.4	Discussion	56

PART III: GENERAL DISCUSSION

9.	Summary of Findings	64
10.	Discussion and Integration of Findings.....	64
11.	Strengths and Limitations.....	64
12.	Outlook, Implications and Conclusions	68
