List of Figures XV

List of Tables XXI

Abstract XXIII

1 Introduction 1
- 1.1 Motivation 1
- 1.2 CO_2 Emissions 2
- 1.3 Carbon Capture and Storage 5
- 1.4 Research Objectives 8
- 1.5 Thesis Outline 9

2 Post-Combustion CO_2 Capture 11
- 2.1 Amine Scrubbing 12
- 2.2 Carbonate Looping 13
  - 2.2.1 Standard Carbonate Looping 14
  - 2.2.2 Indirectly Heated Carbonate Looping 16
- 2.3 State of the Scientific Knowledge of the Carbonate Looping Process 18
  - 2.3.1 Stages of Development of the Carbonate Looping Process 18
  - 2.3.2 Worldwide Carbonate Looping Pilot Plants 25

3 Theoretical Fundamentals of the Carbonate Looping Process 35
- 3.1 Chemical Fundamentals 35
  - 3.1.1 Chemical Equilibrium 35
  - 3.1.2 Reaction Kinetics 37
  - 3.1.3 Reactivity of Quick Lime 39
- 3.2 Fundamentals of Fluidized Bed Technology 42
  - 3.2.1 Flow Regimes 43
  - 3.2.2 Geldart Particle Characterization 44
  - 3.2.3 Solid Distribution 45
- 3.3 Fundamentals of Heat Pipe Technology 46
  - 3.3.1 Heat Transport Limits 48
  - 3.3.2 Industrial Application of Heat Pipes 50

4 Experimental Investigations of the Carbonate Looping Process for Various Design Configurations 51
- 4.1 Setup of the 1 MW Directly Fired Carbonate Looping Pilot Plant 51
- 4.2 Experimental Investigations in the 1 MW Pilot Plant 53
  - 4.2.1 Results of the 1 MW_{th} Test Campaigns 53
  - 4.2.2 Discussion of the Directly Heated Test Results in 1 MW Scale 58
- 4.3 Setup of the 300 kW Indirectly Heated Carbonate Looping Test Facility 59
- 4.4 Experimental Investigations in the 300 kW_{th} Pilot Plant 72
  - 4.4.1 Test Campaign without Carbonator Cooling 72
  - 4.4.2 Test Campaign with Carbonator Cooling 80

4.4.3 Estimation of the Measurement Uncertainties 86
4.4.4 Discussion of the Indirectly Heated Test Results in 300 kW_{th} Scale 87
5 Modeling of the CO_2 Capture in the Carbonate Looping Process 89
5.1 Overview of Existing Models using Kinetic and Hydrodynamic Approaches 89
5.2 Modified Carbonator Model for the Simulation of the CL Process 95
5.2.1 Kinetics and Capacity of Quick Lime 95
5.2.2 Basic Assumptions 97
5.2.3 Composition of Fluid Flows 98
5.2.4 Modeling of the Circulating Fluidized Bed 99
5.2.5 Modeling of Effects due to Calcium Sulfate Generation 101
5.2.6 Calculation of CO_2 Capture in Dependency on the Molar Conversion 101
5.2.7 Calculation of the CO_2 Capture in Dependency of the Material Balance 103
5.2.8 Modification of the Model for Simulation of the CL Process 104
5.2.9 Model Sequence 106
5.2.10 Sensitivity Analysis 108
5.3 Validation of the Carbonator Model 114
5.3.1 Validation by Experimental Data of the 1 MW Pilot 114
5.3.2 Validation by Experimental Data of the 300 kW Pilot 121
5.3.3 Discussion of the Results and Challenges 129
6 Thermodynamic Evaluation of Various Carbonate Looping Process Configurations 133
7 Economical Evaluation of the Carbonate Looping Process 142
7.1 Model for Calculation of the Levelized Costs of Electricity 144
7.2 Cost Evaluation of the Reference Plant 152
7.3 Cost Evaluation of the Indirectly Heated Carbonate Loping Process 154
7.3.1 Cost Evaluation based on the 300 kW_{th} Pilot Plant 159
7.3.2 Sensitivity Analysis 160
7.3.3 Analysis of Extreme Scenarios 165
7.4 Cost Evaluation of the Standard Carbonate Looping Process 166
7.5 Cost Comparison with other CO_2 Capture Processes 168
8 Conclusion and Future Work 169
9 References 173
10 Appendix 179
Curriculum Vitae 192
