TABLE OF CONTENTS

1	<i>Introduction</i>	1
1.1	Antibodies	2
1.1.1	Benchmark analysis	2
1.1.2	Antibody formats	3
1.1.3	ABF – key benefits	6
1.1.4	Specific examples	6
1.1.5	Antibody production systems	8
1.2	<i>Bacillus megaterium</i> as production host	12
1.3	Objectives	14
2	<i>Theory</i>	15
2.1	“Omics” approach	15
2.2	Flow cytometry and cell heterogeneity	17
2.2.1	Flow cytometry – history and function	17
2.2.2	Assessing cell states	18
2.2.3	Cell heterogeneities	20
2.3	Process development	22
3	<i>Material and methods</i>	25
3.1	Strain and plasmid	25
3.2	Sampling of cultivation supernatant	26
3.3	High-performance liquid chromatography analysis	27
3.4	Biomass measurements	27
3.5	Quantification of the antibody fragment D1.3 scFv concentration via ELISA	27
3.6	Cell bank – <i>Bacillus megaterium</i>	29
3.7	Screening in deep well plates	29
3.8	Cultivation conditions – deep well plates	30
3.9	Cultivation conditions – batch	31

3.10 Cultivation conditions – fed-batch	32
3.11 Gas analysis	32
3.12 Oscillating fed-batch strategy	32
3.13 Flow cytometry	34
3.14 Dye screening for membrane potential estimation	34
3.15 DiOC₂(3) ratio analysis	35
3.16 Membrane potential calibration	35
3.17 Viability assay	36
3.18 Single cell production intensity assay	36
3.19 Immuno field emission scanning electron microscopy	36
3.20 Confocal laser scanning microscopy	37
3.21 Population cluster analysis	37
3.21.1 DiOC ₂ membrane potential assay (SS, EV) (FL1, FL3)	38
3.21.2 Production intensity assay (FL1, FL3) (FL1, FL3, SS, EV)	43
3.22 Central composite design	44
3.23 Genetic algorithm	44
3.24 Prediction of metal-dependent enzymes of <i>Bacillus megaterium</i>	45
3.25 DNA micro arrays	46
3.25.1 RNA-preparation	46
3.25.2 One colour microarray	46
3.26 Chemicals	46
4 Results and discussion	47
4.1 Aims of the work	47
4.2 Medium design	48
4.2.1 Carbon source screening	48
4.2.2 Inducer screening	49
4.2.3 Genetic algorithm approach – optimization of metal ion concentrations	50
4.2.4 Statistical DoE – optimization of MgSO ₄ and (NH ₄) ₂ SO ₄ concentrations	58

4.3 Single cell analysis	59
4.3.1 Membrane potential	59
4.3.2 Cell integrity	63
4.3.3 Production intensity	64
4.4 Process development	67
4.4.1 Batch culture	67
4.4.2 Fed-batch culture	73
4.4.3 Up-scale approach	81
4.5 Transcriptome analysis	83
4.5.1 Differential gene expression dependent on recombinant ABF D1.3 scFv production/secretion in <i>Bacillus megaterium</i>	85
4.5.2 Growth phase dependent gene expression	88
4.5.3 Growth phase dependent gene expression related to recombinant ABF D1.3 scFv production	92
4.5.4 Summary	94
4.6 Culture heterogeneity	98
4.6.1 Late induction of ABF D1.3 scFv production	98
4.6.2 Batch process with 50 g/L initial carbon source	106
4.6.3 Process relevance of heterogeneities	108
5 Conclusions and outlook	110
5.1 Medium design	110
5.2 Advanced process control	111
5.3 Process development and limitations	113
5.4 Era of cytomics and data modeling	114
5.5 Antibodies – a future perspective	115
5.5.1 Potential of microbial systems	115
5.5.2 Most promising antibody formats	117
5.5.3 Future – application	118
6 References	119
7 Nomenclature	136
7.1 Abbreviations	136
7.2 Symbols	139
