Abstract	iii
Acknowledgements	v
Declaration of Authorship	vii
1 Introduction	1
1.1 Motivation	1
1.2 Large-Scale Structures in Wall-Bounded Turbulence	4
1.3 Theoretical Background	9
1.3.1 Pipe Flow Principles	9
1.3.2 Surface Roughness	13
1.3.3 Energy Cascade and Turbulence Scales	14
1.3.4 Power Spectral Density	16
1.4 Objectives of the Thesis	19
1.5 Outline of the Thesis	20
2 Experimental Facilities & Methods	23
2.1 Experimental Facilities	23
2.1.1 CoLaPipe - Cottbus Large Pipe	25
2.1.2 CICLoPE - Center for International Cooperation in Long Pipe Experiments	30
2.2 Experimental Methods	31
2.2.1 Pressure Measurements	31
2.2.2 Hot-Wire Anemometry	33
2.2.3 Particle Image Velocimetry	37
3 Flow Development in CoLaPipe	41
3.1 Introduction	41
3.1.1 Transition in Pipe Flow	41
3.1.2 Developing Turbulence in Pipe Flow	43
3.1.3 Perturbation Caused by Ring Obstacles at the Inlet	46

3.1.4	Wall Pressure Measurements	47
3.2	Friction Factor for Fully Developed Turbulent Flow in CoLaPipe	47
3.3	Pressure Fluctuations along the CoLaPipe	49
3.3.1	Pressure Fluctuations without Ring Disturbance	49
3.3.2	Pressure Fluctuations with Ring Perturbation	51
3.3.3	Scaling of Wall Pressure Fluctuations	53
4	Scaling of Turbulence Spectra in CoLaPipe and CICLoPE	55
4.1	Experimental Background	55
4.2	One-Dimensional Spectral Scaling in CoLaPipe	56
4.3	One-Dimensional Spectral Scaling in CICLoPE	72
4.4	Similarity Aspects of Turbulence Spectra in CoLaPipe and CIC- LoPE	89
5	Extent of Streamwise Flow Structures using PIV in CoLaPipe	99
5.1	Experimental Background	99
5.2	PIV Setup	103
5.3	Spatial Auto-Correlation	105
5.4	Streamwise PIV Results in CoLaPipe	107
6	Conclusions and Final Remarks	117
6.1	Wall Pressure Measurements	118
6.2	Hot-Wire Measurements	119
6.3	PIV Measurements	120
Bibliography		121
