Abstract v
List of Figures xi
List of Tables xiii
Abbreviations xiv
Chapter 1: Introduction 1
1.1 Introduction to the Research 1
1.2 Reason for Carrying out the Research 2
1.3 Case Study 3
1.4 Research Questions 5
1.5 Research Objectives 5
1.6 Methods of Attack 5
1.6.1 Rationale and Benefits of the Framework 7
1.7 Limitations of the Research 8
1.8 Expected Outcomes 9
Chapter 2: Today's System 11
2.1 Introduction 11
2.2 Electricity Generation Overview 11
2.3 Electricity Demand Overview 15
2.3.1 Averaged Daily Demand Curve for Consecutive Years 16
2.4 CO_2 Emission and Environmental Effects 18
2.5 Power System Topology and Electrification Level in Sri Lanka 19
2.5.1 Electrification of Households 20
Chapter 3: Potential Studies of Wind, Solar, Hydro and Energy Storage Systems 21
3.1 Overview 21
3.2 Potential Study of Solar Energy 21
3.2.1 Introduction to Solar Energy 21
3.2.2 Solar Power Potential in Sri Lanka 24
3.2.3 Processing Solar Radiation on PV Panel 26
3.2.4 Solar PV Orientation 28
3.2.5 Optimum Tilt for Solar PV Collector 29
3.2.6 Shading from Solar PV Arrays 33

3.2.7 Data for Analysis....37
3.2.8 Simulation Results....38
3.2.9 Site Selection for Solar PV Power Plant....39
3.3 Design of Wind Power System....40
3.3.1 Introduction to Wind Energy and Technological Development....40
3.3.2 Wind Power Potential in Sri Lanka....41
3.3.3 Mathematical Background of Wind Energy Potential Studies....43
3.3.4 Wind Turbine Power Characteristic Curve....46
3.3.5 Wind Speed Estimation at the Hub Height....47
3.3.6 The Probability Distribution of Wind Speeds....48
3.3.7 Numerical Calculation....52
3.3.8 Site Selection for Wind Power Plant Installation....60
3.4 Potential Study of Hydro Power....61
3.5 Energy Storage Systems....64
3.5.1 Literature Studies on PSPP in Sri Lanka....64
Chapter 4: Modelling 100% Renewable Energy System....67
4.1 Introduction....67
4.2 Renewable Energy System Modelling Approaches....67
4.3 Method of Optimization....68
4.4 Electricity Demand....68
4.4.1 Hourly averaged Electricity Demand Pattern....69
4.5 Potential Analysis of Renewable Energy Resources....70
4.5.1 Solar and Wind Power Potentials for a Day in December....71
4.5.2 Hydro Power Potential for a Day in December....73
4.6 Overview of Costing Figures....74
4.7 Modelling....75
4.7.1 Sample Calculation....75
4.8 Optimum Capacity Mix....76
4.9 Simulation Results at the Optimum Mix of Generation....80
4.10 Sensitivity Analysis of Energy Model with Optimum Ratio....83
4.10.1 Electricity Generation Mix....84
Chapter 5: Time Scale Study of Energy Model....86
5.1 Introduction....86

5.2 Time Scale Structure 86
5.2.1 Inertial Response 88
5.2.2 Role of Wind and Solar in Inertial Response 88
5.2.3 Primary Frequency Response 89
5.2.4 Secondary Frequency Control 93
5.2.5 Primary and Secondary Frequency Control in Sri Lanka 94
5.2.6 Role of Wind and Solar for Secondary Frequency Control 94
5.3 Current Standards of Frequency Deviations 95
5.4 Minimum Inertia for Inertial Frequency Response 95
5.4.1 Grid Code for Analysis 96
5.4.2 Theoretical Background 97
5.4.3 Hourly Modelling 97
5.4.4 Minimum Inertia Required 97
5.4.5 Methodology 98
5.5 Calculation of RoCoF and Minimum Inertia Required 101
5.6 Small Signal Stability 105
5.6.1 Natural Frequency of Oscillation of Power System 107
5.6.2 Oscillations Damping 110
5.6.3 Controlling Oscillations and Damping 112
Chapter 6: Renewable Energy Penetration and Frequency Stability 114
6.1 Generator Response to Disturbed Operation 114
6.1.1 Equations of Motion 114
6.2 Load Frequency Studies 118
6.3 Load Behaviour to Frequency Deviation (Self Regulating Effect) 120
6.3.1 Derivation of Load Damping Coefficient (D) 121
6.3.2 Simplification and Block Diagram Representation 124
6.3.3 Calculation of Equivalent Inertia of a Power System 125
6.4 Unification of Units and Acceptability of Derived Equations 125
6.5 Solving First Order Differential Equation 126
6.5.1 Method 1: Analytical Method 126
6.6 Sample Calculation in Method 1 (Analytical) 129
6.6.1 Calculating the Equivalent Inertia Constant 131
6.6.2 Load Damping Coefficient, D 133

6.7 Sample Calculation in Method 2: Matlab Simulink Model 135
6.7.1 Matlab Simulink Model 136
6.7.2 Results Obtained from Matlab Simulink Model 137
6.7.3 The Convergence to Steady State Frequency in Matlab Simulink Model 137
6.8 Comparison of results Obtained from Two Methods of Solutions 139
6.9 Remarks 140
6.9.1 Abbreviations 141
6.9.2 Symbols and Nomenclature 141
Chapter 7: Conclusion and Discussion 143
7.1 100% Renewable Energy System 143
7.2 The Model Validation 145
7.3 Stabilization of 100% Renewable Electric Power System 146
7.4 The Rate of Change of Electricity Generation and Demand 147
7.5 Future Works 150
Appendix 1 151
Appendix 2 152
References 153
