Contents

Abstract	iii
Contents	iv
List of Figures	vii
List of Tables	xi
Symbols	xiii
1 Introduction	1
1.1 General description of dry and wet collision dynamics	3
1.1.1 Dry collision behavior	3
1.1.2 Additional effects during wet collisions	7
1.2 Coefficient of restitution	11
1.3 Previous research	12
1.3.1 Collision dynamics of dry particles	12
1.3.2 Collision dynamics of wet particles	17
1.3.3 Existing models for wet particle collisions	21
1.4 Summary	30
2 Methods of Investigation	31
2.1 Experimental Procedure	31
2.2 Materials	33
2.2.1 Solid Materials	33
2.2.2 Surface conditioning	34
2.2.3 Liquid Materials	35
2.2.4 Change of mass	36
2.3 Force balance model	37
3 Collision of dry particles and a wet wall	43
3.1 Normal collision	43
3.1.1 Collision velocity and liquid properties	44
3.1.2 Particle size	46
3.1.3 Combination of solid materials	48
3.2 Oblique collision	50
3.2.1 Collision angle	50
3.2.2 Initial particle rotation	55

3.2.3	Liquid properties	59
3.2.4	Surface roughness	59
3.3	Comparison to existing models	65
3.4	Unified correlation	68
4	Simulation of particle - wall collisions via force balances	73
4.1	Geometry of capillary bridges	73
4.2	Validation	76
4.2.1	Convergence	76
4.2.2	Normal collision	77
4.2.3	Oblique collision	80
4.3	Extended studies of collision dynamics via force balance model	84
4.3.1	Influence of particle size	84
4.3.2	Distribution of dissipated energy	85
4.3.3	Collision angle and initial rotation	88
5	Approaching dynamics of particle - particle collisions	95
5.1	Collision of wet particles and a dry wall	95
5.1.1	Normal collision	96
5.1.2	Oblique collision	99
5.2	Collision of wet particles and a wet wall	101
5.3	First numerical impressions on particle - particle collisions	102
5.3.1	Particle size	103
5.3.2	Collision angle	105
5.3.3	Initial rotation	107
5.3.4	Influence of liquid layers	110
6	Conclusion	113
A	Appendix	117
	Bibliography	127
