Motivation	1
Preamble	1
Micro-integrated laser systems, state of the art	3
1 Introduction	6
1.1 Developments in III-V semiconductor phase modulators	6
1.2 Thesis objectives: GaAs-based passive photonic components	7
1.2.1 Objective: GaAs-based phase modulators	8
1.2.2 Objective: GaAs-based couplers	9
1.2.3 Application: GaAs-based amplitude (intensity) modulator	10
1.3 Structure of the thesis	11
2 Fundamentals of guided-wave optics	13
2.1 Electro-magnetic wave propagation in planar waveguides	14
2.1.1 Planar electro-magnetic waves	14
2.1.2 Reflection of planar waves	15
2.1.3 Planar waveguides	17
2.1.4 Ridge waveguides	20
2.1.5 Bent waveguides	21
2.2 Planar waveguide couplers	21
2.2.1 Concepts for ridge waveguide couplers	22
2.2.2 Self-imaging in multi-mode interference couplers	24
2.2.3 Interference mechanisms of self-imaging	27
2.2.4 Characteristics of waveguide couplers	28
3 Theory of GaAs-based electro-optic phase modulators	29
3.1 Electro-optic effects in GaAs	30
3.1.1 Linear and quadratic electro-optic effects	30
3.1.2 The index ellipsoid	30
3.2 Free carrier effects (carrier density-related effects)	34
3.3 GaAs-based double heterostructures	34
3.3.1 The p-n junction and the heterojunctions	35
3.3.2 GaAs/AlGaAs double heterostructures phase modulators	35
3.3.3 Phase modulation efficiency in double heterostructures	36

4 Design of GaAs-based phase modulators	38
4.1 Material profile for GaAs-based phase modulators	38
4.2 Design of phase modulators for laser radiation at 780 nm	39
4.2.1 Electro-optic coefficients of $\text{Al}_{0.35}\text{Ga}_{0.65}\text{As}$	39
4.2.2 Vertical waveguide at 780 nm	40
4.2.3 Lateral waveguide at 780 nm	46
4.3 Design of phase modulators for laser radiation at 1064 nm	47
4.3.1 Electro-optic coefficients of GaAs at 1064 nm	47
4.3.2 Vertical waveguide at 1064 nm	48
4.3.3 Lateral waveguide at 1064 nm	50
5 Design of GaAs-based waveguide couplers	51
5.1 General remarks on multi-mode interference couplers	51
5.2 Design rules of the multi-mode interference couplers	52
5.3 Numerical methods for simulation of waveguide couplers	53
5.4 Design of MMI couplers for applications at 780 nm	54
5.4.1 Access waveguides	54
5.4.2 Geometry of the multi-mode waveguide	54
5.4.3 Interfaces of the multi-mode waveguide to access waveguides . .	59
5.4.4 S-bends	60
5.5 Design of directional couplers	60
5.6 Conclusions	61
6 Application: Mach-Zehnder intensity modulator	62
7 Fabrication of GaAs-based passive components	64
7.1 Material growth	64
7.2 Lithography	65
8 Electro-optic Performance	67
8.1 Electro-optic Performance: GaAs-based phase modulators	67
8.1.1 Electrical properties of phase modulators	67
8.1.2 Phase modulation efficiency	69
8.1.3 Propagation losses	70
8.1.4 Conclusions	73
8.2 Electro-optic Performance: GaAs-based couplers	74
8.2.1 Bent waveguides	74
8.2.2 Directional couplers	76
8.2.3 Multi-mode interference couplers	78
8.2.4 Conclusions	81
8.3 Electro-optic performance: Application	82
8.3.1 Measurement setup	82
8.3.2 Mach-Zehnder intensity modulator with 1x2 couplers	82
8.3.3 Mach-Zehnder intensity modulator with 2x2 couplers	84
8.3.4 Conclusions	85

9 Heterodyne analysis of GaAs-based phase modulators	87
9.1 Novel method for electro-optic characterization of phase modulators	88
9.1.1 Method description	88
9.1.2 In-depth analysis of the modulation signal	89
9.1.3 Sensitivity of novel method	91
9.2 Implementation of the novel method	91
9.2.1 Measurement setup	91
9.2.2 Measurement accuracy	93
9.2.3 Preparation of modulator chips for characterization	93
9.3 Measurement of the phase modulation efficiency	95
9.3.1 Phase modulator chip C3059-3 010118 at 1064 nm	96
9.3.2 Phase modulator chip D2043-3 080511 at 780 nm	97
9.4 Residual amplitude modulation	98
9.5 Modulation bandwidth	99
9.6 Determination of the electro optic coefficients	101
9.6.1 Electro-optic coefficients of GaAs at 1064 nm	101
9.6.2 Electro-optic coefficients of Al _{0.35} Ga _{0.65} As at 780 nm	104
9.7 Conclusions	105
10 Conclusions and Outlook	107
10.1 GaAs-based phase modulators and waveguide couplers	107
10.2 In-depth characterization of phase modulators	108
List of Abbreviations and Symbols	111
Appendix A: GaAs (Al_xGa_{1-x}As) compound semiconductors	113
.1 Zinkblende structures	113
.2 GaAs wafers	114
.3 Optical properties of GaAs	115
.3.1 Energy band gap and absorption in GaAs	115
.3.2 Refractive index of Al _x Ga _{1-x} As	115
Appendix B: List of measured chips using the FP method	117
List of Publications	119
