

## Table of contents

1 General Introduction: A review of interactions between dietary fiber and the gastrointestinal microbiota and their consequences on intestinal phosphorus metabolism in growing pigs ..	1
1.1 Abstract.....	2
1.2 Introduction .....	2
1.3 Dietary fiber .....	4
1.3.1 Definition, classification and microbial fermentability .....	4
1.3.2 Physiological aspects of dietary fiber .....	5
1.3.3 General description of interactions between dietary fiber and minerals.....	7
1.4 Microbiota .....	7
1.4.1 Commensal microbiota in the GIT of pigs .....	7
1.4.2 Adaptation of the bacterial community to dietary fiber.....	9
1.5 Phosphorus.....	11
1.5.1 Bacteria and their phosphorus requirement .....	11
1.5.2 Interactions between intestinal microbiota, dietary fiber and phosphorus absorption in rats .....	13
1.5.3 Interactions between intestinal microbiota, dietary fiber and phosphorus digestibility and absorption in pigs .....	14
1.6 Implications .....	17
1.7 Scope and Objective of the Thesis.....	17
1.8 References .....	19
2 Effects of fermentable carbohydrates and low dietary phosphorus supply on the chemical composition of faecal bacteria and microbial metabolites in the gastrointestinal tract of pigs .....	29
2.1 Abstract.....	30
2.2 Introduction .....	30
2.3 Materials and Methods.....	31
2.3.1 Animals, housing and surgical procedures .....	31
2.3.2 Experimental design, diets and procedures .....	32
2.3.3 Isolation of MBM.....	34
2.3.4 Analyses.....	35
2.3.5 Statistics.....	37
2.4 Results.....	37
2.4.1 Chemical composition of faecal MBM.....	37
2.4.2 Level of total VFA, DAP and pH values in faeces and ileal digesta.....	38
2.4.3 Recovery of P and Ca at the ileal and faecal level and disappearance in the LI .	39
2.5 Discussion .....	40

## Table of contents

---

2.5.1 Chemical composition of MBM .....	40
2.5.2 Fermentation metabolites, pH and DAP in ileal digesta and faeces .....	42
2.6 Conclusions .....	44
2.7 Acknowledgements .....	44
2.8 References .....	45
3 Changes in bacterial populations in the ileum of pigs fed different sources of fermentable carbohydrates .....	49
3.1 Abstract.....	50
3.2 Introduction .....	51
3.3 Materials and methods.....	52
3.3.1 Animals, diets and collection of faeces and ileal digesta.....	52
3.3.2 Realtime PCR - Assays .....	54
3.3.3 Quantification of fluorescent signals .....	55
3.3.4 PCR-DGGE.....	55
3.3.5 Analyses of fermentation products.....	56
3.3.6 Statistical Analysis.....	56
3.4 Results.....	56
3.4.1 Total bacterial counts in ileum and faeces .....	57
3.4.2 Bacterial populations in ileal digesta.....	57
3.4.3 Ileal bacterial diversity .....	58
3.4.4 Bacterial metabolites in ileal digesta and faeces.....	61
3.5 Discussion .....	62
3.6 Conclusion .....	68
3.7 Acknowledgements .....	69
3.8 References .....	70
4 The effect of dietary P and Ca level, phytase supplementation and ileal infusion of pectin on the chemical composition and carbohydrase activity of fecal bacteria and the level of microbial metabolites in the gastrointestinal tract of pigs.....	75
4.1 Abstract.....	76
4.2 Introduction .....	77
4.3 Materials and Methods.....	77
4.3.1 Animals and Housing.....	78
4.3.2 Dietary Treatments .....	78
4.3.3 Experimental Procedure .....	80
4.3.4 Isolation of Fecal Mixed Bacterial Mass.....	81
4.3.5 Analytical Methods .....	82
4.3.6 Calculations and Statistical Analysis.....	84
4.4 Results.....	85

## Table of contents

---

4.4.1 Experiment 1 .....	85
4.4.2 Experiment 2 .....	92
4.5 Discussion .....	98
4.6 Acknowledgements .....	102
4.7 Literature cited .....	103
5 General Discussion .....	107
5.1 Introduction .....	108
5.2 Comparison of methods used for isolation of mixed bacterial mass .....	109
5.3 Influence of fermentable carbohydrates and dietary P level on the chemical composition of faecal mixed bacterial mass .....	109
5.4 Factors affecting P and Ca disappearance in the large intestine .....	111
5.5 Effect of dietary P level and phytase supplementation on fermentation characteristics of carbohydrates .....	112
5.6 Evaluation of total bacterial cell counts, bacterial metabolites and diaminopimelic acid concentrations.....	113
5.7 Effect of fermentable carbohydrates on the ileal bacterial composition and diversity....	115
5.8 Intestinal microbiota and between animal variation .....	116
5.9 Conclusion and suggestions for further research .....	117
5.10 References .....	119
6 Summary .....	123
7 Zusammenfassung .....	127
