

Contents

1	Introduction	1
1.1	Tunable diode lasers	1
1.2	Upconversion IR detection	1
1.3	Types of tunable diode lasers	2
1.4	Motivation	3
1.5	Project Scope	3
2	Fundamentals of laser diodes	5
2.1	Optical Gain in Semiconductors	5
2.2	Vertical confinement	6
2.3	Lateral confinement	7
2.4	Power characteristics	8
2.5	Spectral properties	10
2.6	Wavelength tuning	10
3	DBR-RW lasers	13
3.1	Vertical structure	13
3.2	Lateral structure	15
3.3	Device mounting	15
3.4	Reference lasers	16
4	Y-branch DBR-RW lasers	19
4.1	Electro-optical characteristics	20
4.2	Spatial characteristics	23
4.3	Simulations of single S-bend structures	25
4.4	Simulations of Y-branch structures	27
4.5	Device characteristics without operating the Y-section	30
4.6	Conclusion	34
5	Multi-wavelength DBR-RW lasers	35
5.1	Four-arm DBR-RW Lasers	35
5.2	Six-branch DBR-RW laser	42
5.3	Conclusion	46

6 Heater based wavelength tuning	47
6.1 Heater configurations	47
6.2 Tuning reproducibility	50
6.3 Tuning of the individual lasers	51
6.4 Conclusion	55
7 Sampled-grating DBR-RW laser	57
7.1 Concept and design of SG lasers	57
7.2 Vertical structure	65
7.3 Grating characterization	69
7.4 SG-DBR laser characterization	74
7.5 Conclusion	78
8 High power tunable MOPA lasers	79
8.1 Tapered power amplifier	79
8.2 Hybrid MOPA configuration	82
8.3 DBR-RW based MOPA system	84
8.4 Y-branch based MOPA system	89
8.5 Sampled-grating based MOPA system	94
8.6 Conclusion and discussion	98
9 Applications	101
9.1 Upconversion detection	101
9.2 Hyperspectral Imaging	104
9.3 Summary	105
10 Summary and outlook	107
A Etching depth	115
B Fitting of the internal parameters	117
C Effective cavity length	121
D Convergence test	123
E Photographs of the developed lasers	125
F MATLAB code of the Transfer matrix model	129
G Sampled-grating reflectivity models	131
H Facet coating	133
Bibliography	141
