| LIST OF TABLES | | vi |
| LIST OF FIGURES | | vii |
| ABSTRACT | | ix |
| ZUSAMMENFASSUN | \G | xi |
| CHAPTER 1 | General introduction | 13 |
| | New challenges and incentives in agriculture | 13 |
| | Plant growth-promoting rhizobacteria viz. micro-organism that can influence plants and their environment | 15 |
| | The bacterial genus Pseudomonas | 16 |
| | Production and formulation of bioproducts | 17 |
| | Biopesticides, plant protection products and the new regulation | 22 |
| | Microbial biopesticides present on the German market | 23 |
| | The plant and its rhizosphere microbiome | 27 |
| | Strawberry | 30 |
| | Strawberry market and organic farming | 30 |
| | Overview of the major strawberry diseases | 31 |
| | Management of strawberry soil pathogens | 34 |
| | Objectives of this thesis | 37 |
| CHAPTER 2 | Optimization of a freeze-drying process for <i>Pseudomonas</i> spp. and its influence on viability, storability and efficacy | 39 |
| CHAPTER 3 | Influence of different growth conditions on the survival and the efficacy of freeze-dried <i>Pseudomonas fluorescens</i> Pf153 cells | 42 |
| CHAPTER 4 | Influence of different temperatures and culture ages on storage survival and efficacy of <i>Pseudomonas fluorescens</i> Pf153 freeze-dried cells | 45 |
| CHAPTER 5 | Greenhouse and field assessment of the influence of RhizoVital [®] 42 fl., Trichostar [®] and <i>Metarhizium brunneum</i> Ma43 on strawberries in the presence of soil-borne diseases | 47 |
| CHAPTER 6 | General discussion | 51 |
| | Freeze-drying Pseudomonas | 52 |
| | Freeze-drying process | 53 |
| | Co-formulation substances | 55 |
| | Storage | 58 |
| | Influence and optimization of cultural parameters | 60 |
| | Compatibility studies between biological control agents and pesticides | 62 |
| | From the screening to the applicable microbial plant protection product | 65 |
| | In vitro dual culture and on detached plant parts tests | 65 |
| | Experimental designs for greenhouse and field trials | 68 |
| | Importance of testing the formulated micro-organism under real commercial conditions | 71 |

| | Technologies to understand and improve plant protection products performance | 74 |
|-----------------|---|-----|
| | Verticillium wilt and microsclerotia quantification | 76 |
| | Conclusions | 79 |
| REFERENCES | | 80 |
| SUPPLEMENTS | Supplement 1: Optimization of a freeze-drying process for the biocontrol agent <i>Pseudomonas</i> spp. and its influence on viability, storability and efficacy | 95 |
| | Supplement 2: Influence of different growth conditions on the survival and the efficacy of freeze-dried <i>Pseudomonas fluorescens</i> strain Pf153 | 105 |
| | Supplement 3: Influence of fermentation temperature and duration on survival and biocontrol efficacy of <i>Pseudomonas fluorescens</i> Pf153 freeze-dried cells | 123 |
| | Supplement 4: Field assessment on the influence of RhizoVital [®] 42 fl. and Trichostar [®] on strawberries in the presence of soil-borne diseases | 141 |
| | Appendix to supplement 4: Selected micro-organisms in greenhouse and controlled field trials against <i>Verticillium dahliae</i> and <i>Phytophthora cactorum</i> on strawberries | 151 |
