Contents

List of Symbols and Abbreviations	viii
1 Introduction	1
1.1 Motivation	1
1.2 Purpose and scope of this thesis	3
2 Fundamentals	6
2.1 Electrochemical systems for energy conversion	6
2.2 Electrochemical reactions and their kinetics	7
2.2.1 The Butler-Volmer equation	8
2.2.2 Adsorption models	12
2.3 Bioelectrochemical systems	15
2.3.1 Reactor concepts, transport processes and electrode materials	16
2.3.2 Electrochemical characterisation	19
2.3.3 Biofilm kinetics	23
2.4 Electrochemical and analytical techniques for studying kinetics . .	26
Part 1 – Electrochemical oxidation reactions	31
3 CO oxidation on a Pt/Ru catalyst	33
3.1 Introduction	33
3.2 Experimental	36
3.2.1 Cell design	36
3.2.2 Residence time measurements	37
3.2.3 Differential Electrochemical Mass Spectrometer setup	37
3.2.4 Solutions and electrode preparation	38
3.3 Modelling	39
3.3.1 Computational fluid dynamics	39
3.3.2 Model for CO oxidation at a porous electrode	40

3.4	Results and discussion	44
3.4.1	Flow analysis of the cyclone cell	44
3.4.2	DEMS calibration for CO ₂	52
3.4.3	Kinetics of CO oxidation at a porous electrode	55
3.5	Conclusions	60
4	Methanol oxidation on a Pt/Ru catalyst	61
4.1	Introduction	61
4.2	Theory of species flux-based frequency response analysis	63
4.3	Experimental	65
4.4	Modelling	66
4.5	Parameter identification	71
4.6	Model validation	72
4.7	Results and discussion	75
4.7.1	FRA frequency range	75
4.7.2	Non-linearity at high input current magnitude	76
4.7.3	Relationship between MS signal noise and maximum frequency	77
4.7.4	Contributions of transport and reaction processes	78
4.7.5	Sensitivity analysis	83
4.8	Conclusions	85
	Part 2 – Bioelectrochemical oxidation reactions	87
5	Acetate oxidation in a biofilm electrode	89
5.1	Introduction	89
5.2	Experimental	91
5.2.1	Electrochemical cell	91
5.2.2	Electrochemical measurements	92
5.2.3	Inoculum and media composition	92
5.3	Results and discussion	93
5.3.1	Chronoamperometry	93
5.3.2	Cyclic voltammetry	95
5.3.3	Quantitative analysis of CO ₂ production	100
5.3.4	Storage mechanisms	101
5.4	Conclusions	106

6	Glycerol oxidation in a bioelectrochemical system	108
6.1	Introduction	108
6.2	Material and methods	111
6.2.1	Reactor setup and operation	111
6.2.2	Inoculum and media composition	113
6.2.3	Concentration measurements	113
6.2.4	Bacterial community analysis	114
6.3	Results and discussion	115
6.3.1	Pretest: Step changes in residence time	115
6.3.2	Concentration pulse responses under closed-circuit potentiostatic conditions	116
6.3.3	Concentration pulse responses under open-circuit conditions	120
6.3.4	Pathways active in the bioelectrical system	122
6.3.5	Conversion efficiencies	123
6.3.6	Rate constants in the planktonic phase	125
6.3.7	Rate constants in the biofilm	127
6.3.8	Microbial community analysis	130
6.4	Conclusions for the experimental part	131
6.5	Modelling and parameter identification for the biofilm	132
6.5.1	Background and approach	132
6.5.2	Modelling	134
6.5.3	Parameter identification	137
6.5.4	Structural identifiability analysis	139
6.5.5	Results and discussion	140
6.6	Conclusions for the modelling part	145
7	Conclusions	147
7.1	Summary	147
7.2	Perspectives	149
	Bibliography	153
A	Appendix	172
A.1	Additional experimental data for CO oxidation experiment	172
A.2	Surface coverages for the cyclic voltammogram of the methanol oxidation reaction	173

A.3	Additional data and calculations for acetate oxidation in a biofilm electrode	173
A.3.1	Estimation of the ion current background	173
A.3.2	Calculation of equilibrium potentials of acetate for different concentrations	175
A.3.3	Mass Spectrometric Cyclic Voltammograms at all scan rates	176
A.3.4	Mass Spectrometric Cyclic Voltammograms from the control experiment	177
A.3.5	Potential steps under turnover conditions	178
A.4	Derivation of the effective half-saturation rate constant $K_{S,ef}$ for the biofilm model	179
