Contents

1	Introduction	1
2	Fundamentals	7
2.1	Noise Emissions and Noise Sources in Electrical Drives	7
2.2	Terms and Definitions for Machine Acoustics	9
2.2.1	Definition of Waves and Vibrations	9
2.2.2	Signal Processing and Acoustic Analysis	10
2.3	Inverter and Machine Control	17
2.3.1	Basics in Machine Control	17
2.3.2	Considered Inverter Modulation Schemes	18
3	Electromagnetic Modeling of Induction Machines	23
3.1	Sequential Electromagnetic Simulation	25
3.1.1	Current Calculation	25
3.1.2	Force Model	31
3.2	Integrated Electromagnetic Simulation	52
3.2.1	Modular Air-gap Flux Approach	54
3.2.2	Identification of Occurring Orders	61
3.3	Validation and Comparison	64
3.3.1	Validation with Simulations	64
3.3.2	Validation with Measurements	86
3.4	Conclusion	88
4	Structural Dynamic Modeling	91
4.1	Radial Air-gap Force Decomposition	92
4.2	Stator Tooth Force	94
4.3	Structural Response Analysis	96
4.4	Surface Displacement Synthesis	97
4.5	Validation and Comparison	98
4.5.1	Comparison of Tooth Force Simulations	99
4.5.2	Comparison of Structural Transfer Functions (TFs)	100
4.5.3	Resultant Structure and Force Shapes	101
4.5.4	Validation with Surface Velocity Measurements	104
4.6	Conclusion	106

Contents

5 Operating Point Adaption	107
5.1 Concept for Operating Point Adaption	108
5.2 Acoustic Measurements	112
5.3 Calculation of the Operating Points	116
5.3.1 Operating Points for Best Efficiency	116
5.3.2 Operating Points for Best NVH-behavior	116
5.4 Validation of the Optimization	119
5.5 Side Effects of Operating Point Adaption	119
5.5.1 Stator Current	119
5.5.2 Rotor Current	120
5.5.3 Electromagnetic Torque	120
5.6 Conclusion	122
6 Elimination of Harmonics	123
6.1 Open Loop System: Control of Eccentric Rotor Position	125
6.1.1 Definition of Eccentric Rotor Positions	125
6.1.2 Principle of Rotor Eccentricity Elimination	125
6.2 Closed Loop System: Control on Saturation and Slotting Harmonics	126
6.2.1 Repetitive Controller in d-q-axis Coordinate System	126
6.2.2 Optimization Method with Minimization Algorithm	127
6.2.3 Proportional-integral (PI) - based Harmonic Controller	128
6.2.4 Ability of Harmonic Controllers	133
6.2.5 Principle of Saturation and Slotting Harmonics Elimination	134
6.3 Validation and Comparison	136
6.3.1 Control on Eccentricity Harmonics	136
6.3.2 Control on Saturation and Slotting Harmonics	137
6.4 Conclusion	146
7 Compendium and Outlook	149
Appendix	153
A Induction Machine Drive Data	153
B Signal Flow Chart	154
C Comparison of the Electromagnetic Simulation Methods	155
D Park Transformation	156
E Clarke Transformation	156
F Derivation of Occurring Spatial Orders	156
G Comparison of the Electromagnetic Simulation Results	158
H Constant Tooth Force Approach (tooth)	158
I Modal Analysis	159
J Harmonic Analysis	159
K Modal Superposition	160

Contents

L	Force Response Calculation	162
M	Extension for Sound Power Calculation	163
