<b>I. Introduction</b>	<b>1</b>
<b>1. Introduction</b>	<b>3</b>
1.1. State of the Art of the Mode Matching Technique . . . . .	7
1.2. Organisation of this Thesis . . . . .	8
1.3. Contributions . . . . .	10
<b>2. The Cylindrical Waveguide</b>	<b>13</b>
2.1. The Boundary Value Problem . . . . .	14
2.1.1. The Scalar Wave Equation . . . . .	14
2.1.2. Deriving the Fields . . . . .	15
2.1.3. Boundary Conditions . . . . .	18
2.1.4. Eigenfunctions and Eigenvalues . . . . .	19
2.2. Solving the Boundary Value Problem . . . . .	20
2.2.1. Rectangular Coordinates . . . . .	20
2.2.2. Cylindrical Coordinates . . . . .	21
2.3. The Sturm-Liouville Problem . . . . .	22
2.3.1. Definition and Solution . . . . .	22
2.3.2. Properties of the Solution . . . . .	22
2.3.3. The Cylindrical Waveguide's Boundary Value Problem as Sturm-Liouville Problem . . . . .	23
2.4. Transverse Orthogonality of the Scalar Vector Potential . . . . .	23
2.5. Orthogonality of Transverse Fields . . . . .	24
2.5.1. Derivation of the Orthogonality Condition . . . . .	24
2.5.2. Proof of Orthogonality for a PEC-bounded Empty Waveguide . . . . .	26
2.6. Orthogonality in Partially Filled Waveguides . . . . .	27
<b>3. Eigenwave Expansion of Transverse Field Components</b>	<b>29</b>
3.1. Theoretical Formulation . . . . .	29
3.1.1. Orthogonal Expansion in Vector Spaces of Functions . . . . .	29
3.1.2. Orthogonal Expansion in Coordinate Spaces . . . . .	30
3.2. Electromagnetic Formulation . . . . .	31
3.2.1. Unsigned Transverse Field Components . . . . .	31
3.2.2. Expansion of Transverse Field Components . . . . .	31

<b>II. The Mode Matching Technique</b>	<b>33</b>
<b>4. The Single Interface - Fundamentals of the Mode Matching Technique</b>	<b>35</b>
4.1. Introduction of the Electromagnetic Problem . . . . .	35
4.2. Concept of Mode Matching . . . . .	36
4.3. Deriving the Mode Matching Formalism . . . . .	36
4.3.1. Continuity of Tangential Fields . . . . .	36
4.3.2. Expanding the Continuity Conditions . . . . .	39
4.3.3. The Edge Condition for Truncating the Series . . . . .	40
4.3.4. Calculating the Expansion's Coefficients . . . . .	43
4.3.5. Assembling the Interface Matrix . . . . .	47
4.4. Degrees of Freedom of the Field Solution . . . . .	47
4.5. Solving the Interface Matrix . . . . .	48
4.6. Special Case: Decoupled $TE$ and $TM$ Solution . . . . .	50
<b>5. The Single Waveguide - Modeling Non-Zero Length Waveguides of Uniform Cross-Section</b>	<b>51</b>
<b>6. Advanced Structures - Cascading Segments and Assembling the System Matrix</b>	<b>53</b>
6.1. Preliminary Considerations - Using Segments and Junctions . . . . .	53
6.1.1. Junction Amplitudes . . . . .	53
6.2. The Segment Matrix $\Theta$ . . . . .	55
6.3. Cascading Segments and Assembling the System Matrix $\Psi$ . . . . .	57
6.4. Solving the Structure's System of Equations Using the Reduced System Matrix $\Psi_{Unknown}$ . . . . .	59
<b>7. Investigation of a Simple Structure</b>	<b>63</b>
7.1. The Discontinuities' Interface Matrices . . . . .	64
7.1.1. Coupling between $TE$ and $TM$ Eigenmodes . . . . .	64
7.1.2. Coupling between $TE$ Eigenmodes . . . . .	66
7.1.3. Coupling between $TM$ Eigenmodes . . . . .	67
7.2. The Waveguide Matrix . . . . .	68
7.3. The Structure's Reduced System Matrix . . . . .	69
<b>8. Post-Processing: Scattering Parameter Calculations</b>	<b>71</b>
8.1. Scattering Parameter Calculations . . . . .	71
8.1.1. Definition of Scattering Parameters . . . . .	71
8.1.2. Calculating Scattering Parameters from Eigenmode Amplitudes . . . . .	73
8.1.3. Passivity Check on Scattering Parameters . . . . .	73
<b>9. Convergence of Modal Problems</b>	<b>75</b>
<b>10. Advanced Post-Processing: Equivalent Circuits</b>	<b>77</b>
10.1. Calculation of Equivalent Circuits . . . . .	77
10.1.1. Calculating the Impedance Matrix from the Scattering Matrix . . . . .	78
10.1.2. Mapping the Impedance or Admittance Matrix to Equivalent Circuits . . . . .	80
10.2. Equivalent Circuits for Exemplary Waveguide Discontinuities . . . . .	81

<b>11. Numerical Aspects of the Mode Matching Technique</b>	<b>85</b>
11.1. Dimensions of the Reduced System Matrix . . . . .	87
11.2. Sparsity and Banded Structure of the Reduced System Matrix . . . . .	89
11.3. Computational Effort for Solving the Structure's System of Equations . . . . .	90
11.3.1. LU Decomposition for Dense and Sparse Banded Matrices . . . . .	90
11.3.2. Outlook on Advanced Techniques for Solving Systems of Equations . . . . .	91
11.4. Populating the Reduced System Matrix . . . . .	92
11.4.1. Interface Reusing without and with Flipping . . . . .	92
11.4.2. Separation of Factorisation and Integration during the Calculation of Overlap Integrals . . . . .	95
11.5. Some Thoughts on Parallelisation . . . . .	96
<b>12. Extension of the Mode Matching Technique for Electromagnetic Cavities</b>	<b>97</b>
12.1. The Electromagnetic Cavity's Boundary Value Problem . . . . .	97
12.2. Mode Matching Formalism for Cavities . . . . .	99
12.2.1. Additional Boundary Conditions . . . . .	101
12.2.2. Solution Process . . . . .	102
12.3. Post-Processing for Resonant Problems . . . . .	103
<b>III. Applications and Results</b>	<b>105</b>
<b>13. Microwave Filters</b>	<b>107</b>
13.1. Filter Design by the Insertion Loss Method . . . . .	107
13.1.1. Lowpass Prototype Filters . . . . .	108
13.1.2. Lowpass to Bandpass Transformation . . . . .	110
13.1.3. Direct-Coupled Bandpass Filters and Impedance Inverters . . . . .	111
13.2. Tubular Filters: Stepped-Impedance Lowpass Filter . . . . .	117
13.2.1. Theory of Stepped-Impedance Lowpass Filters . . . . .	117
13.2.2. Results: Solving an 11 <sup>th</sup> Order Tubular Stepped-Impedance Filter .	119
13.3. Tubular filters: Direct-Coupled Bandpass Filters . . . . .	122
13.3.1. Theoretical Aspects of Tubular Direct-Coupled Bandpass Filters .	122
13.3.2. Results: Solving a 4 <sup>th</sup> Order Tubular Direct-Coupled Bandpass Filter	125
13.4. Rectangular Waveguide Filters: Iris-Coupled Bandpass Filter . . . . .	128
13.4.1. Results: Solving a 4 <sup>th</sup> Order Waveguide Iris Filter . . . . .	131
<b>14. Eigenmodes of Partially Filled Coaxial Waveguides</b>	<b>135</b>
14.1. General Discussion . . . . .	136
14.1.1. The Fundamental Eigenmode . . . . .	136
14.1.2. Higher-Order Eigenmodes . . . . .	137
14.2. Derivation of the $TM_{m,0}^z$ Eigenmodes . . . . .	138
14.3. Properties of the Obtained Eigenmodes . . . . .	140
14.4. Solving a Structure Comprising Partially Filled Coaxial Waveguides . . . . .	143
<b>15. Cavity Resonators for Electromagnetic Material Characterisation</b>	<b>145</b>
15.1. State of the Art in Permittivity Measurement . . . . .	146
15.1.1. Resonant Techniques . . . . .	146
15.1.2. Transmission/Reflection Techniques . . . . .	147
15.1.3. Other Relevant Techniques . . . . .	147

## Contents

15.2. Theory of Cavity Perturbation Material Characterisation . . . . .	148
15.2.1. Measurement of the Unloaded Q Factor . . . . .	149
15.2.2. Approximation of $\Omega_d$ . . . . .	154
15.2.3. Cavity Perturbation Theory . . . . .	155
15.3. Exemplary Measurement Data . . . . .	158
15.3.1. Polytetrafluorethylen (PTFE, Teflon) . . . . .	159
15.3.2. Water . . . . .	160
15.4. Results: Investigation of Secondary Effects in Cavity Perturbation Material Measurements . . . . .	163
15.4.1. Simulation Methodology . . . . .	164
15.4.2. Assessment of Secondary Effects . . . . .	165
15.4.3. Compensation of the Observed Secondary Effects . . . . .	169
15.4.4. Conclusion . . . . .	172
<b>16. Conclusion and Future Work</b>	<b>173</b>
16.1. Conclusion . . . . .	173
16.2. Future Work . . . . .	174
<b>IV. Appendices</b>	<b>177</b>
<b>Appendix A. Brief Review of Variational Methods</b>	<b>179</b>
A.1. Direct Method . . . . .	179
A.2. Indirect Methods - Methods of Weighted Residuals . . . . .	181
<b>Appendix B. Eigenmodes of Standard Waveguides</b>	<b>183</b>
B.1. Rectangular Waveguides . . . . .	183
B.1.1. $TE_{m,n}^x$ Eigenmodes . . . . .	184
B.1.2. $TM_{v,w}^x$ Eigenmodes . . . . .	185
B.2. Odd-Order $TE_{m,0}^x$ Eigenmodes of a Waveguide Partially Filled with a Symmetric Dielectric Slab . . . . .	186
B.2.1. Derivation . . . . .	188
B.2.2. Properties of the Obtained Eigenmodes . . . . .	192
B.3. Coaxial Waveguides . . . . .	194
B.3.1. The Mode-Set of Rotationally Symmetric $TM_{m,0}^z$ Eigenmodes . . . . .	194
B.3.2. The $TEM$ Eigenmode as Special Case of $TM$ Eigenmodes . . . . .	196
B.4. Circular Waveguides . . . . .	197
B.4.1. The Mode-Set of Rotationally Symmetric $TM_{m,0}^z$ Eigenmodes . . . . .	197
<b>Appendix C. Voltage and Current in TEM and Non-TEM Waveguides</b>	<b>199</b>
C.1. Coaxial Waveguide . . . . .	200
C.1.1. Power Transport . . . . .	201
C.1.2. Voltage and Current . . . . .	202
C.2. Rectangular Waveguide . . . . .	203
C.2.1. Power Transport . . . . .	204
C.2.2. Voltage and Current . . . . .	205
<b>Appendix D. Analytical Model for an Inner Conductor Step in a Coaxial Waveguide</b>	<b>207</b>

<b>Appendix E. LU Decomposition</b>	<b>211</b>
E.1. LU Decomposition of Dense Matrices . . . . .	211
E.2. LU Decomposition of Banded Matrices . . . . .	216
E.3. Summary on the LU Decomposition's Computational Effort . . . . .	217
