List of publications	V
Conference contribution (in terms of aquaponics)	VI
Abstract	IX
Zusammenfassung	XIII
Contents.....	XVII
List of tables	XXV
List of figures	XXVIII
List of formulars	XXXIII
List of abbreviations	XXXIV
Nomenclature and descriptions	XXXVI
1 General introduction	3
1.1 Scientific background.....	3
1.2 Delimitation, aims, and objectives of the present study	4
1.2.1 Delimitation to already published theses.....	4
1.2.2 Aims and objectives of the present study.....	5
1.3 Set-up of the thesis and short methodical overview.....	7
1.3.1 Overview	7
1.3.2 Experiment 1.....	9
1.3.3 Experiment 2.....	9
1.3.4 Experiment 3.....	10
1.3.5 General discussion and conclusion	10
2 State of knowledge	15
2.1 Effect of hydroponics on the environment	15
2.2 Recirculating aquaculture systems	16
2.3 Aquaponics.....	19
2.3.1 Low-tech, single recirculating aquaponic systems and its bottlenecks	19
2.3.2 Current status of high-tech, double recirculating aquaponic systems.....	25

3	Advanced aquaponics: Evaluation of intensive tomato production in aquaponics vs. conventional hydroponics	33
3.1	Abstract	33
3.2	Introduction	33
3.3	Material and Methods.....	37
3.3.1	System design.....	37
3.3.2	Investigational set up	39
3.3.3	Fish production	39
3.3.4	Plant growth conditions.....	40
3.3.5	Determination of plant yield and plant growth	40
3.3.6	Non-destructively method to determine leaf chlorophyll content.....	41
3.3.7	Sampling and preparation for chemical analyses of tomatoes	41
3.3.7.1	Titratable acid, soluble solids and sugar-acid ratio	42
3.3.7.2	Carotenoids.....	42
3.3.7.3	Sampling and preparation for chemical analyses of nutrients in nutrient solutions	42
3.3.7.4	Nutrients in water samples.....	43
3.3.7.5	Nitrogen in water samples.....	43
3.3.8	Calculation of total fresh water and fertilizer use and its efficiencies	44
3.3.8.1	Water and fertilizer use.....	44
3.3.8.2	Fresh water and fertilizer use efficiency.....	44
3.3.9	Statistical analysis	45
3.4	Results	45
3.4.1	Plant yield and plant growth	45
3.4.2	Primary and secondary metabolites	47
3.4.3	Nutrients in pure fish waste water, as well as in fresh and fish waste water based nutrient solutions	47

3.4.4	Total fresh water use and fertilizer use and their efficiencies	48
3.4.4.1	Fresh water consumption and total fresh water use efficiency	48
3.4.4.2	Fertilizer use and fertilizer use efficiency	49
3.5	Discussion	49
3.5.1	Plant yield and plant growth	49
3.5.2	Fruit quality	51
3.5.3	Water and fertilizer use and its efficiency.....	52
3.5.3.1	Water use and fresh water use efficiency.....	52
3.5.3.2	Fertilizer use and fertilizer use efficiency	53
3.6	Conclusion	55
4	The potential of double recirculating aquaponic systems for intensive tomato production	59
4.1	Abstract	59
4.2	Introduction	59
4.3	Materials and Methods	60
4.3.1	Plant growth and development.....	61
4.3.2	Fruit yield	62
4.3.3	Mineral content of tomato fruit.....	62
4.3.4	Statistical analysis	63
4.4	Results & Discussion	63
4.4.1	Plant growth and development.....	63
4.4.2	Fruit yield	65
4.4.3	Mineral content of tomato fruit.....	67
4.5	Conclusion	68
5	Oxygen consumption in recirculating nutrient film technique in aquaponics	71
5.1	Abstract	71
5.2	Introduction	71

5.3	Materials and Methods	74
5.3.1	Plant production.....	75
5.3.2	Measurement of photosynthetic photon flux density	77
5.3.3	Oxygen concentration/consumption measurements in the cultivation trenches	77
5.3.3.1	Oxygen measurement in the cultivation trenches.....	77
5.3.3.2	Oxygen consumption in the cultivation trenches	79
5.3.4	Oxygen consumption of the different nutrient solutions and fish (waste) water	80
5.3.4.1	Collection of samples and labelling	80
5.3.4.2	Investigation of the oxygen consumption of the different nutrient solutions and fish (waste) water	80
5.3.5	Statistical analysis	82
5.4	Results	83
5.4.1	Oxygen concentrations in the cultivation trenches.....	83
5.4.2	Correlations between oxygen concentration, photosynthetic photon flux density (PPFD), and temperature.....	85
5.4.3	Oxygen consumption in the cultivation trenches	86
5.4.4	Oxygen consumption of the nutrient solutions and fish (waste) water.....	87
5.5	Discussion.....	90
5.6	Conclusion	97
6	An innovative suction filter device reduces nitrogen loss in double recirculating aquaponic systems	101
6.1	Abstract.....	101
6.2	Introduction	101
6.3	Materials and methods	104
6.3.1	Experimental set-up	104
6.3.1.1	The suction filter device	106
6.3.2	Fish and tomato production	107

6.3.2.1	Fish production	107
6.3.2.2	Plant growth conditions.....	108
6.3.3	Determination of tomato yield.....	110
6.3.4	Sampling, preparation and chemical analysis of nitrogen in fish water (RAS water) and fish waste water	110
6.3.5	Calculation of total water and fertilizer use and its efficiencies	111
6.3.5.1	Water and fertilizer use.....	111
6.3.5.2	Fresh water and fertilizer use efficiency.....	111
6.3.6	Statistical analysis	112
6.4	Results and discussion	112
6.4.1	Fish and tomato fruit production	112
6.4.2	Nitrogen concentrations in fish water (RAS water) and fish waste water	115
6.4.3	Nitrogen losses caused by the three chamber pit and its suppression.....	118
6.4.4	Water consumption, fresh water use efficiencies, and production ratio	120
6.4.5	Fertilizer savings and fertilizer use efficiency and causing environmental relief	121
6.5	Conclusion	123
7	Prospects and challenges of double recirculating aquaponic systems (DRAPS) for intensive plant production	127
7.1	Abstract.....	127
7.2	Introduction	127
7.3	Materials and methods	129
7.3.1	System design.....	129
7.3.2	Fish production	129
7.3.3	Nitrogen loss due to the secondary clarifier while using the original DRAPS	130
7.3.4	The new suction filter	130

7.3.5	Modifying the double recirculating aquaponic system.....	131
7.3.6	Nitrogen content in fish water while using the new suction filter.....	132
7.3.7	Statistical analysis	133
7.4	Results and discussion	133
7.4.1	Nitrogen loss due to the secondary clarifier.....	133
7.4.2	Effect of the new suction filter on nitrogen content	134
7.5	Conclusion	137
8	Lettuce (<i>Lactuca sativa</i> , variety Salanova) production in decoupled aquaponic systems: Same yield and similar quality as in conventional hydroponic systems but drastically reduced greenhouse gas emissions by saving inorganic fertilizer.....	141
8.1	Abstract.....	141
8.2	Introduction	142
8.3	Material and Methods.....	144
8.3.1	Lettuce cultivation and experimental set-up.....	144
8.3.1.1	Adjustment of the nutrient solution	146
8.3.1.2	Fish water.....	147
8.3.2	Sampling of the nutrient solutions	148
8.3.2.1	Nitrogen and nutrient analyses of process water and nutrient solutions.....	148
8.3.2.2	pH and electrical conductivity	148
8.3.2.3	Total and dissolved organic carbon	149
8.3.2.4	Colony-forming units	149
8.3.3	Assessment of plant growth.....	149
8.3.4	Sampling and preparation for chemical analysis of lettuce. 150	
8.3.4.1	Nitrogen and carbon content as well as mineral elements in lettuce leaves.....	150
8.3.4.2	Nitrate content in lettuce leaves.....	151
8.3.4.3	Analysis of phenolic compounds	151

8.3.5	Calculation of fertilizer savings and greenhouse gas reduction	152
8.3.6	Statistical analysis	152
8.4	Results	153
8.4.1	Plant yield and plant growth	153
8.4.2	Fertilizer and water savings	153
8.4.3	Nutrient composition of the used nutrient solution	154
8.4.4	pH value and electrical conductivity of the nutrient solution	156
8.4.5	Total and dissolved organic carbon	158
8.4.6	Colony-forming units content in the nutrient solutions.....	158
8.4.7	Nitrate, nitrogen, carbon, and mineral content in lettuce leaves	159
8.4.8	Phenolic acids and flavonoids in lettuce leaves	160
8.5	Discussion.....	161
8.5.1	Plant yield and plant growth	161
8.5.2	Fertilizer savings and fertilizer use efficiency.....	163
8.5.3	Nutrient management in decoupled aquaponics.....	164
8.5.4	Abiotic and microbiological features of the nutrient solution	165
8.5.5	Effect on quality parameters of lettuce	167
8.5.5.1	Phenolic compounds in lettuce leaves	167
8.5.5.2	Nitrate content in lettuce leaves.....	168
8.6	Conclusion	169
8.7	Supporting material.....	169
8.7.1	S1-1 Nitrogen analysis of process waters and nutrient solutions.....	169
8.7.2	S1-2 Nutrient analysis of process waters and nutrient solutions.....	170
8.7.3	S1-3 Mineral elements in lettuce leaves.....	171

8.7.4	S1-4 Qualitative and quantitative analysis of phenolic compounds	171
8.7.5	S1-5 Data used for the calculation of CO ₂ -equivalents	172
9	General discussion	175
9.1	Plant production in double recirculating aquaponic systems – quantity and quality parameters	176
9.2	Nutrient management in double recirculating aquaponic systems	183
9.3	Optimal fish to plant ratio	194
9.4	Environmental relief by double recirculating aquaponic systems	196
10	General conclusion and recommendations	201
10.1	Summary of advantages and disadvantages of double recirculating aquaponic systems	202
10.1.1	Strengths	203
10.1.2	Weaknesses	205
10.1.3	Opportunities	206
10.1.4	Threats	207
10.2	Summary and evaluation of improvements of double recirculating aquaponic systems	208
10.3	Outlook and recommendations for further research	209
10.3.1	Plant production in double recirculating aquaponic systems	209
10.3.2	Connection between fish and plant	209
10.3.3	Sustainability issues	210
10.3.4	Fish to plant ratio	211
10.3.5	Large-scaled systems	211
10.3.6	Intercropping	211
10.3.7	Consumers acceptance and fish welfare	211
