# Contents

<b>Abstract</b> .....	<b>i</b>
<b>Contents</b> .....	<b>iii</b>
<b>List of figures</b> .....	<b>vi</b>
<b>List of tables</b> .....	<b>xiii</b>
<b>1 Introduction</b> .....	<b>1</b>
1.1 Motivations and Objectives .....	1
1.2 Background .....	3
1.3 Thesis outline .....	3
<b>2 Fundamentals for describing the reservoir stimulation in a geosystem</b> .....	<b>5</b>
2.1 Overview of a reservoir stimulation and the corresponding geo-processes .....	5
2.2 Geomechanics in the reservoir stimulation .....	8
2.2.1 Stress and force equilibrium.....	9
2.2.2 Strain and geometric equations .....	15
2.2.3 Geomechanical constitutive models .....	17
2.2.4 Fracture mechanics.....	20
2.3 Fluid flow in the reservoir stimulation .....	28
2.3.1 Navier-Stokes and mass conservation equations.....	29
2.3.2 Fluid flow in a fracture.....	30
2.3.3 Fluid flow in porous mediums.....	31
2.3.4 Mass transport in fluid.....	31
2.4 Heat transport in the reservoir stimulation .....	32
2.4.1 Heat conduction.....	32
2.4.2 Solid-fluid heat exchange .....	33
2.5 Numerical methods for implementing the theoretical models.....	34
2.5.1 Finite Difference Method and Finite Volume Method .....	35
2.5.2 Explicit and Implicit Euler Methods .....	38
2.6 Simulation concept for modeling the coupled THM processes in reservoir stimulation .....	40

<b>3 Numerical study of the fluid viscosity's influences on shaping of a stimulated fracture in tight sandstone in consideration of thermal effects and THM coupled processes.....</b>	<b>42</b>
3.1 Overview of the modeling methods for a hydraulic fracturing and the influences from fluid's viscosity.....	43
3.2 Implemented models in FLAC3D <sup>plus</sup> for modeling the hydraulic fracturing.....	44
3.2.1 Governing equations for HM module.....	45
3.2.2 Governing equations for heat transport.....	49
3.2.3 THM coupled processes.....	49
3.2.4 Numerical formulation of the THM coupling in FLAC3D <sup>plus</sup> .....	51
3.2.5 Verifications of the heat transport.....	54
3.3 Numerical study of the fluid viscosity's influences on shaping of a stimulated fracture based on a fictive model.....	61
3.3.1 Model generation and parameters.....	61
3.3.2 Treatment schedule.....	63
3.3.3 Modeling results of the operation with various fluid viscosity but without leak off.....	64
3.3.4 Modeling results of the operation with various pay zone permeabilities and constant fluid viscosity.....	71
3.3.5 Modeling results of the operation with various fluid viscosity and leak off.....	79
3.3.6 Influences from the proppant.....	87
3.4 A real case study to investigate the fluid viscosity's influences in practical operation in consideration of thermal effects and THM coupled processes – stimulation operation in tight gas reservoir Leer.....	91
3.4.1 Information of the gas field Leer.....	92
3.4.2 Model generation and parameters of Leer reservoir.....	94
3.4.3 Injection schedule and change of the fluid viscosity with time and temperature.....	96
3.4.4 Modeling results.....	97
3.5 Summary.....	111
<b>4 Numerical investigation on the geothermal operation induced microseismic by case study and influencing factors.....</b>	<b>113</b>
4.1 Overview of the EGS-project Landau and the induced micro seismic events.....	113
4.1.1 Location and geological conditions.....	113

4.1.2 Seismic events .....	116
4.2 The coupled simulator TOUGH2MP-FLAC3D .....	121
4.2.1 Coupled concept of TOUGH2MP-FLAC3D .....	121
4.2.2 Introduction of the damage concept to the HM coupled model .....	123
4.3 Numerical investigation of the induced seismicity during the stimulation in Landau .....	126
4.3.1 Construction of a model for the site .....	127
4.3.2 Parameter determination .....	129
4.3.3 Initial and boundary conditions .....	131
4.3.4 Treatment schedule and modeling results .....	133
4.3.5 Modified schedules for reducing the risks of induced seismicity .....	142
4.4 Summary .....	149
<b>5 Advanced FLAC3D<sup>plus</sup> – a further developed 3D-Simulator for modeling of hydraulic fracturing in consideration of fracture propagation with arbitrary orientation and hydro-mechanical coupling effects .....</b>	<b>150</b>
5.1 Fracture’s propagation in stimulation operation .....	150
5.2 The further developed hydro-mechanical simulator for modeling fracture’s propagation with arbitrary orientation .....	152
5.2.1 Realization of fracture’s propagation with arbitrary orientation in FLAC3D <sup>plus</sup> .....	152
5.2.2 Fracture propagation and orientation .....	155
5.3 Verification of the improved simulator .....	159
5.3.1 Propagation of a KGD fracture .....	159
5.3.2 Steering of a fracture .....	162
5.4 A 3D example .....	163
5.5 Summary .....	166
<b>6 Conclusion and outlook .....</b>	<b>167</b>
<b>7 References .....</b>	<b>171</b>
<b>Appendix A Fracture width and volumetric concentration of proppant at the end of stimulation and at the compacted status .....</b>	<b>178</b>
<b>Appendix B Mechanical and hydraulic properties of the rock formations in Leer .....</b>	<b>179</b>
<b>Appendix C Thermal properties of the rock formations in Leer .....</b>	<b>181</b>
