

Contents

1	Introduction	1
1.1	Motivation	1
1.2	Scope of the dissertation	3
2	InP HBT transferred-substrate process	5
2.1	Transferred-substrate process	5
2.2	Process description	7
3	Plasma etching of benzocyclobutene	17
3.1	Dry etched interconnects in the InP transferred-substrate process	17
3.2	Plasma for semiconductor processing	18
3.2.1	Plasma generation and basics	18
3.2.2	General parameters for semiconductor plasma processing	22
3.3	Capacitive and inductive coupled plasma etch equipment	24
3.4	Process development	25
3.4.1	Methods and Tools	25
3.4.2	BCB parameters and basic dry etch principles	27
3.4.3	BCB dry etching experiments before the equipment upgrade	29
3.4.4	BCB dry etching experiments after the equipment upgrade	33
3.5	Methods to suppress redeposition	40
3.6	Implementation into the InP HBT process	42
3.7	Chapter 3 summary	44
4	Nickel chrome thin film resistors	45
4.1	Fundamentals of thin film resistors in electronics	46
4.2	Process development	50
4.2.1	Methods and Tools	50
4.2.2	Nickel chrome technology development	52

4.2.3	Electrical results	57
4.2.4	Thermal stress tests and simulation	60
4.3	Implementation into the InP HBT process	65
4.3.1	High frequency results	68
4.4	Chapter 4 summary	71
5	Through silicon vias in a transferred-substrate process	73
5.1	Motivation	73
5.2	Fabrication methods of through silicon vias	76
5.3	Process development	77
5.3.1	Methods and Tools	77
5.3.2	Mimic process	79
5.3.3	Electrical results	91
5.4	Implementation into the InP HBT process	93
5.4.1	InP device measurements with a TSV substrate	98
5.5	Outlook of the TSVs in the InP process	101
5.6	Chapter 5 summary	101
6	Summary	103
