PREFACE	I
KURZZUSAMMENFASSUNG	III
ABSTRACT	V
TABLE OF CONTENTS.....	VII
TABLE OF ABBREVIATIONS	XI
TABLE OF SYMBOLS	XII
Chapter 1 Introduction	1
1.1 Motivation.....	1
1.2 State-of-the-art	2
1.3 Objectives.....	3
1.4 Publications and contributions associated with this research work	5
Chapter 2 Background	7
2.1 Two-phase flow basics	7
2.1.1 Flow regimes	9
2.1.1 Heat transfer during evaporation.....	12
2.1.2 Dimensionless characteristic numbers	13
2.1.3 Pressure drop.....	15
2.2 Two-phase flow instabilities	18
2.2.1 Classification of static instabilities	20
2.2.1.1 Ledinegg instability	20
2.2.1.2 Boiling crisis instability.....	21
2.2.1.3 Flow pattern instability	22
2.2.2 Classification of dynamic instabilities.....	22
2.2.2.1 Density wave oscillations	22
2.2.2.2 Pressure drop oscillations	25
Chapter 3 Two-phase flow test rig.....	28

3.1	Design of the test rig.....	28
3.1.1	Thermal-hydraulic design of the heated pipe section.....	28
3.1.2	Process design and main components	31
3.1.3	Process instrumentation and error analysis	43
3.1.4	User interface and control of the test rig.....	48
3.2	Commissioning of the test rig.....	51
3.2.1	Pump curve (external characteristic).....	51
3.2.2	Flow resistance of inlet restriction	53
3.2.3	Flow resistance of exit restriction	54
3.2.4	Roughness of heated pipe.....	54
3.2.5	Evaporator efficiency.....	56
Chapter 4 Dynamic simulation of two-phase flow		58
4.1	Mathematical modeling of two-phase flow.....	59
4.1.1	Homogeneous model.....	60
4.1.2	Heterogeneous model.....	61
4.1.2.1	Wall friction correlations	62
4.1.2.2	Interfacial friction correlations	64
4.2	Numerical solution method of the APROS simulation software	65
4.3	Modeling	67
4.3.1	Simplified simulation model for steady-state	67
4.3.2	Simplified simulation model for density wave oscillations	69
Chapter 5 Experimental results		71
5.1	Experimental procedure and operating points	71
5.2	Steady-state pressure drop	75
5.2.1	Reference operating point	75
5.2.2	Variation of heating power Q	81
5.2.3	Variation of inlet subcooling N_{sub}	83
5.2.4	Variation of inlet pressure pi	86
5.2.5	Variation of inlet pressure pi and inlet temperature Ti	87
5.2.6	Variation of inlet flow resistance ζ_{inlet}	89

5.2.7	Variation of exit flow resistance ζ_{exit}	91
5.2.8	Summary of steady-state operating points	92
5.3	Density wave oscillations.....	95
5.3.1	Reference operating point	95
5.3.2	Variation of inlet subcooling N_{sub}	101
5.3.3	Variation of exit flow resistance ζ_{exit}	104
5.3.4	Summary of density wave oscillations operating points.....	107
Chapter 6 Dynamic simulation results.....		109
6.1	Steady-state pressure drop.....	109
6.1.1	Homogeneous model: Influence of correlations and numerical settings.....	110
6.1.1.1	Wall friction coefficient	110
6.1.1.2	Number of control volumes	112
6.1.1.3	Further configuration parameters	114
6.1.2	Homogeneous model: Physical parameter study.....	114
6.1.2.1	Variation of Heating Power Q	114
6.1.2.2	Variation of subcooling number N_{sub}	115
6.1.2.3	Variation of inlet pressure pi and temperature Ti	116
6.1.3	Heterogeneous model: Influence of correlations and numerical settings	117
6.1.3.1	Wall friction coefficient	117
6.1.3.2	Interfacial friction in bubbly flow	119
6.1.3.3	Number of control volumes	121
6.1.3.4	Further configuration parameters	122
6.1.4	Heterogeneous model: Physical parameter study	122
6.1.4.1	Variation of Heating Power Q	123
6.1.4.2	Variation of subcooling number N_{sub}	123
6.1.4.3	Variation of inlet pressure pi and temperature Ti	124
6.1.5	Comparison of flow models for steady-state operating conditions.....	125
6.2	Density wave oscillations.....	127
6.2.1	Homogeneous model: Influence of numerical settings and other parameters.....	128
6.2.1.1	Time discretization.....	128
6.2.1.2	Interpolation scheme for the density.....	129
6.2.1.3	Pump curve.....	130
6.2.2	Homogeneous model: Physical parameter study.....	131

6.2.3	Heterogeneous model: Influence of numerical settings and other parameters	134
6.2.3.1	Time discretization	134
6.2.3.2	Interpolation scheme for the density	135
6.2.3.3	Order of Upwind-scheme	136
6.2.4	Heterogeneous model: Physical parameter study	137
6.2.5	Comparison of flow models for simulation of density wave oscillations	139
Chapter 7 Conclusion and Outlook		142
