| Abstract | vii |
| Zusammenfassung | ix |
| List of Figures | xv |
| List of Tables | xix |
| List of Abbreviations | xxiii |
| List of Symbols | xxv |
| 1 Storage of Renewable Energy – Introduction and Scope | 1 |
| 1.1 Motivation and Objectives | 1 |
| 1.2 Previous Publications | 3 |
| 1.2.1 Design and Steady State Thermodynamics of CAES | 3 |
| 1.2.2 Time Dependent Thermodynamics of CAES | 5 |
| 1.2.3 Hydrogen Options for CAES | 10 |
| 1.3 Scope of this Thesis | 13 |
| 2 Compressed Air Energy Storage – Basic Principles | 15 |
| 2.1 Technical Work | 16 |
| 2.2 Exergy | 17 |
| 2.3 Efficiency | 19 |
| 3 Steady State Thermodynamics of CAES | 27 |
| 3.1 Huntorf Plant | 27 |
| 3.1.1 Inner Efficiency | 29 |
| 3.1.2 State Variables T-s and h-s Diagrams | 31 |
| 3.1.3 Technical Work and Heat | 31 |
| 3.1.4 Mechanical Efficiency | 34 |
| 3.1.5 Energy Storage Efficiencies | 36 |
| 3.2 McIntosh Plant | 39 |
| 3.2.1 Inner Efficiency | 40 |
| 3.2.2 State Variables T-s and h-s Diagrams | 41 |
| 3.2.3 Technical Work and Heat | 41 |
| 3.2.4 Mechanical Efficiency | 42 |
| 3.2.5 Energy Storage Efficiency | 42 |
| 3.3 Next Generation CAES | 44 |
| 3.3.1 Adiabatic CAES (ADELE) | 46 |
| 3.3.2 Isobaric CAES (ISACOAST) | 49 |

| | | |
|----------|---|------------|
| 3.3.3 | Quasi-Isothermal CAES (Sager Meer) | 54 |
| 3.4 | Comparison and Results | 58 |
| 3.5 | Conclusions | 60 |
| 3.5.1 | Thermodynamic Assumptions | 60 |
| 3.5.2 | Efficiency | 61 |
| 4 | Time Dependent Thermodynamics of CAES | 63 |
| 4.1 | Compressed Air Storage Cavern (CAS) | 63 |
| 4.1.1 | Mass balance | 64 |
| 4.1.2 | Energy balance | 65 |
| | Numerical Solution for air as Real Gas | 66 |
| | Numerical Solution for air as Ideal Gas | 66 |
| | Simplified Analytical Solution for Ideal Gas | 67 |
| 4.1.3 | Heat Transfer - Thermal Properties of Salt Rock | 68 |
| 4.1.4 | Validation of CAS Calculation Methods with Huntorf Data | 69 |
| 4.1.5 | Charging Level of the CAS for Energy System Analysis | 72 |
| 4.2 | Compressor (C) and Turbine (T) in Unsteady Conditions | 73 |
| 4.2.1 | Changing Cavern Pressure | 73 |
| 4.2.2 | Start-Up/Run Down Procedures | 77 |
| 4.2.3 | Operation in a Part Load | 78 |
| 4.3 | Thermal Energy Storage (TES) | 80 |
| 5 | Hydrogen Options for CAES, Huntorf Case Study | 83 |
| 5.1 | Hydrogen Production | 83 |
| 5.2 | Hydrogen Storage in Salt Caverns | 84 |
| 5.3 | Hydrogen Combustion as Natural Gas Substitute | 87 |
| 5.4 | Discussion | 91 |
| 6 | Economics of CAES | 93 |
| 7 | Case Study of 100 % Renewable Lower Saxony with CAES | 97 |
| 7.1 | 100 % Renewable Energy Lower Saxony | 97 |
| 7.2 | Next Generation CAES Concept for Renewable Energies | 101 |
| 7.2.1 | Steady State Properties | 101 |
| 7.2.2 | Dynamic Operation | 103 |
| 7.3 | Results | 104 |
| 8 | Conclusions | 107 |
| A | Measured Data of the Huntorf CAES Plant | 109 |
| A.1 | Charging | 109 |
| A.2 | Discharging | 110 |
| | Bibliography | 117 |
