

# Contents

<b>1</b>	<b>Summary</b>	<b>5</b>
<b>2</b>	<b>The early history of the <math>\Delta a</math> photometric system</b>	<b>7</b>
<b>3</b>	<b>The diagnostic tools of the <math>\Delta a</math> photometric system</b>	<b>8</b>
<b>4</b>	<b>Other indices measuring the 5200Å region</b>	<b>10</b>
<b>5</b>	<b>The variability of the <math>\Delta a</math> index</b>	<b>13</b>
5.1	CP stars . . . . .	14
5.2	Be/shell stars - The case of Pleione . . . . .	20
5.3	Variable star detection via $\Delta a$ photometry . . . . .	21
5.3.1	Temporal analysis and results . . . . .	22
5.3.2	Individual variables and Conclusions . . . . .	26
<b>6</b>	<b>Chemically Peculiar stars of the upper main sequence</b>	<b>27</b>
<b>7</b>	<b>Other star groups interesting for the <math>\Delta a</math> photometric system</b>	<b>30</b>
7.1	Blue Stragglers . . . . .	30
7.2	Herbig Ae/Be stars . . . . .	32
7.3	Be/shell stars . . . . .	33
7.4	B[e] stars . . . . .	33
7.5	Evolved and Population II stars . . . . .	35
<b>8</b>	<b>An inspection of the wavelength region from 4900 to 5700Å</b>	<b>38</b>
8.1	The 5200Å flux depression . . . . .	38
8.2	Features of Stars across the HRD . . . . .	40
8.3	Features of Quasars . . . . .	48
8.4	Features of Galaxies . . . . .	50
<b>9</b>	<b>Spectrophotometry of the 5200Å region for peculiar and normal type stars</b>	<b>54</b>
9.1	Data and reduction . . . . .	54
9.2	Results . . . . .	58
9.3	Known peculiar objects . . . . .	59
9.4	Apparent normal-type objects . . . . .	61
9.5	Conclusions . . . . .	66

<b>10 A catalogue of <math>\Delta a</math> measurements for Galactic field stars</b>	<b>67</b>
10.1 Selection, preparation, and homogenization of the data . . . . .	69
<b>11 The detection probability of the <math>\Delta a</math> system for Population I stars</b>	<b>72</b>
11.1 The normal type objects . . . . .	73
11.2 Outliers not included in RM09 . . . . .	75
11.3 CP1 stars . . . . .	75
11.4 CP2 stars . . . . .	78
11.5 CP3 stars . . . . .	79
11.6 CP4 stars . . . . .	79
11.7 $\lambda$ Bootis stars . . . . .	79
11.8 Supergiants . . . . .	79
11.9 Be/shell stars . . . . .	81
11.10 Newly confirmed CP stars . . . . .	81
11.11 Comparison with the Geneva $\Delta(V1 - G)$ and $Z$ indices . . . . .	82
<b>12 An empirical temperature calibration for the <math>\Delta a</math> photometric system</b>	<b>84</b>
12.1 The B-type stars . . . . .	85
12.1.1 Sample of program stars . . . . .	86
12.1.2 The estimation of the reddening . . . . .	87
12.1.3 The calibration of the effective temperature . . . . .	88
12.1.4 The calibration procedure for the $\Delta a$ photometric system . . . . .	89
12.2 The A-type and mid F-type stars . . . . .	92
12.2.1 Sample of program stars . . . . .	93
12.2.2 The estimation of the reddening . . . . .	94
12.2.3 The calibration of the effective temperature . . . . .	95
12.2.4 The result for the $\Delta a$ photometric system . . . . .	96
<b>13 Theoretical isochrones for the <math>\Delta a</math> photometric system</b>	<b>98</b>
13.1 Models, data selection, and isochrone fitting . . . . .	99
<b>14 Synthetic <math>\Delta a</math> photometry</b>	<b>104</b>
14.1 The normality line . . . . .	104
14.1.1 The synthetic $\Delta a$ filter system . . . . .	106
14.1.2 Calibration relations . . . . .	106
14.1.3 Luminosity effects . . . . .	110
14.1.4 Metallicity effects . . . . .	112
14.2 The cool CP and $\lambda$ Bootis stars . . . . .	112

14.2.1	Model atmospheres for CP stars . . . . .	113
14.2.2	Selected sample of stars . . . . .	116
14.3	Individual models: parameter determination with observed fluxes . . . . .	118
14.3.1	CP1 stars . . . . .	119
14.3.2	CP2 stars with $T_{\text{eff}} \leq 8500$ K . . . . .	122
14.4	CP2 stars with $8500$ K $\leq T_{\text{eff}} \leq 10000$ K . . . . .	127
14.5	Comparison of the synthetic and observed $\Delta a$ photometry for ten CP stars . . . . .	130
14.5.1	$\lambda$ Bootis stars . . . . .	130
14.5.2	CP1 stars . . . . .	131
14.5.3	CP2 stars . . . . .	131
14.5.4	Spectroscopic observations of the 5200Å depression	133
14.6	Observational constraints . . . . .	134
14.7	Microturbulence, abundances, and atomic data . . . . .	136
14.8	Stratification and magnetic fields . . . . .	137
14.9	Stellar model atmospheres with magnetic line blanketing . . . . .	139
14.9.1	The stellar model atmosphere code LLModels . . .	139
14.9.2	The behaviour of $\Delta a$ , $(\Delta V1 - G)$ , and $Z$ in correlation with $T_{\text{eff}}$ and $B$ . . . . .	140
14.9.3	Effects of the individual abundance patterns . . . . .	143
<b>15</b>	<b>Heuristic observational correlations for CP stars</b>	<b>146</b>
<b>16</b>	<b>Investigating the <math>\lambda</math> Bootis spectroscopic binary hypothesis using <math>\Delta a</math> photometry</b>	<b>153</b>
16.1	Modelling the spectroscopic binary systems . . . . .	153
16.2	Results and Conclusions . . . . .	156
<b>17</b>	<b>The <math>\Delta a</math> observations of Galactic open clusters</b>	<b>158</b>
17.1	The characteristics of open clusters . . . . .	158
17.2	Photoelectric $\Delta a$ observations of Galactic open clusters . . . . .	160
17.2.1	Observations and reduction . . . . .	161
17.2.2	Feinstein 1 . . . . .	164
17.2.3	NGC 2168 . . . . .	165
17.2.4	NGC 2323 . . . . .	166
17.2.5	NGC 2437 . . . . .	166
17.3	CCD $\Delta a$ observations of Galactic open clusters . . . . .	167
17.4	The observation of Blue Stragglers in open clusters . . . . .	170
17.5	Statistics of the observed open clusters . . . . .	171

<b>18 The first <math>\Delta a</math> observations of three Galactic globular clusters</b>	<b>176</b>
18.1 Target selection, observations and reduction . . . . .	179
18.2 Discussion . . . . .	180
<b>19 The <math>\Delta a</math> observations within the Large Magellanic Cloud</b>	<b>186</b>
19.1 Target fields and observations . . . . .	187
19.2 Reduction and calibration . . . . .	189
19.3 The incidence of the apparent peculiar objects . . . . .	191
19.4 The spectroscopic verification of one CP and Be star . . .	195
19.4.1 Target selection, observations, and reductions . . .	195
19.4.2 Results and conclusions . . . . .	196
19.5 The (non-)variability of magnetic CP candidates in the LMC	199
19.5.1 <i>I</i> light variability of mCP stars . . . . .	202
19.5.2 Periodograms . . . . .	204
19.5.3 Discussion of periodograms . . . . .	205
19.5.4 The mCP candidates suspected of periodic light variations . . . . .	207
19.5.5 Conclusions . . . . .	210
<b>20 A case study of using Gunn <i>g</i> data to improve <math>\Delta a</math></b>	<b>211</b>
<b>21 The ALHAMBRA and COSMOS surveys</b>	<b>215</b>
<b>22 Conclusions and Outlook</b>	<b>218</b>
<b>23 References</b>	<b>219</b>
