Contents

1 Introduction 1
- 1.1 Motivation . . . 1
- 1.2 Basic setup . . . 2
- 1.3 Goals and thesis outline . . . 4

2 Theoretical Principles 7
- 2.1 Knudsen number and flow regimes . . . 7
- 2.2 Lagrangian and Eulerian specification of the flow field . . . 9
- 2.3 Conservation of mass . . . 11
- 2.4 Conservation of momentum . . . 12
- 2.5 Conservation of energy . . . 18
- 2.6 Ideal gas . . . 22
- 2.7 The Laval nozzle . . . 24
- 2.8 Fundamentals of plasma . . . 32
  - 2.8.1 Physical properties of plasma . . . 33
- 2.9 Kinetic theory of gases . . . 42
  - 2.9.1 Fundamental concepts . . . 42
  - 2.9.2 Velocity distribution function and macroscopic properties . . . 48
  - 2.9.3 Maxwell distribution . . . 54
  - 2.9.4 Boltzmann equation . . . 57
- 2.10 Summary . . . 66

3 Computational Methods 67
- 3.1 Methods based on transport equations . . . 67
  - 3.1.1 Finite Difference Method . . . 67
  - 3.1.2 Finite Volume Method . . . 69
  - 3.1.3 Methods for unsteady problems . . . 76
  - 3.1.4 Solution algorithms for the Navier-Stokes equations . . . 83

3.2 Direct Simulation Monte Carlo (DSMC) . . . 89
3.2.1 Molecular transport . . . 90
3.2.2 Molecular collisions . . . 91
3.2.3 Implementation of boundary conditions . . . 97
3.2.4 Macroscopic properties . . . 100
3.3 Particle-In-Cell Method (PIC) . . . 101
3.3.1 Particle motion - Lorentz solver . . . 102
3.3.2 Field equations - Maxwell solver . . . 105
3.3.3 Particle and force weighting . . . 106
3.4 Summary . . . 108

4 Transonic Gas Flows Across Multiple Flow Regimes 109
4.1 State of the art and previous studies . . . 109
4.2 Experimental setup . . . 113
4.2.1 Vacuum and measurement systems . . . 113
4.2.2 Arcjet thruster and Laval nozzle . . . 114
4.2.3 Experimental series . . . 115
4.3 Numerical setup . . . 115
4.3.1 Solved equations and numerical solver . . . 115
4.3.2 Numerical mesh and boundary conditions . . . 117
4.3.3 Numerical setup for DSMC simulations . . . 119
4.4 Results and discussion . . . 121
4.4.1 Experimental results . . . 121
4.4.2 Navier-Stokes simulations . . . 123
4.4.3 DSMC results . . . 127
4.4.4 Comparison between Navier-Stokes and experimental results . . 131
4.4.5 Knudsen-dependent correcting function for the dimensionless pressure drop . . . 132
4.4.6 Molar mass dependency of the Knudsen function coefficients . . 142
4.4.7 Thrust and specific impulse . . . 145
4.5 Summary . . . 153

5 Development of a Kinetic Plasma Model for Electric Propulsion Systems 157
5.1 Electric propulsion systems for spacecraft . . . 157
5.2 State of the art and previous works . . . 159
5.2.1 Resistojets . . . 160
5.2.2 Arcjet thrusters . . . 160
5.2.3 Ion thrusters . . . 163
5.2.4 Hall thrusters . . . 166

5.3 Development of a kinetic plasma model . . . 172
5.3.1 General modelling concept . . . 173
5.3.2 Basis DSMC solver . . . 177
5.3.3 Implementation of PIC algorithm . . . 183
5.3.4 Coulomb collisions with the MCC algorithm . . . 189
5.3.5 Electron-neutral collisions . . . 203
5.3.6 Recombination . . . 214
5.3.7 Boundary conditions in *dsmcPlasmaFoam* . . . 219
5.3.8 Numerical aspects . . . 223
5.3.9 Global model implementation in OpenFOAM . . . 226
5.4 Summary . . . 226

6 Validation of dsmcPlasmaFoam 231
6.1 Maxwell solver . . . 231
6.2 Lorentz solver . . . 241
6.2.1 Solver behaviour without implementation of the Leapfrog algorithm . . . 242
6.2.2 Solver behaviour with implemented Leapfrog algorithm . . . 248
6.3 Particle and force weighting . . . 253
6.4 Coulomb collisions . . . 259
6.5 Electron-neutral collisions . . . 267
6.6 Summary . . . 272

7 Conclusion 275
7.1 Summary . . . 275
7.2 Conclusion and outlook . . . 278

Appendix 281

A Mathematical Theorems 281
A.1 Divergence theorem . . . 281
A.2 Reynolds transport theorem . . . 281

B Source Code dsmcPlasmaFoam 283
B.1 Maxwell solver . . . 283
B.2 Lorentz solver . . . 285
B.3 Cumulative Coulomb collisions . . . 289
B.4 Electron-Neutral collisions . . . 303
B.5 Dynamic particle weighting . . . 312
