Contents

1	Introduction	1
2	Theoretical principles and state of the art	5
2.1	Ultrashort pulse laser technology for material processing	5
2.1.1	Single pulse ablation	5
2.1.2	Principles to increase the volumetric ablation rate	7
2.1.3	Heat accumulation effects and heat transfer	9
2.1.4	Ablation strategies	10
2.2	Laser beam shaping	12
2.2.1	Wavefront of a laser beam	13
2.2.2	Fourier transform in diffractive beam shaping	13
2.2.3	Common beam shaping methods	15
2.3	Liquid crystal on silicon spatial light modulators	18
2.3.1	Structure and functionality	18
2.3.2	Standard optical setup	21
2.3.3	Applications of spatial light modulators for material processing	23
2.4	Phase retrieval algorithms	24
2.4.1	Overview	24
2.4.2	Iterative Fourier Transform Algorithm	27
2.4.3	Machine learning methods for phase retrieval	29
3	Materials and methods	33
3.1	Processed materials	33
3.2	System components	34
3.2.1	Laser-scanner systems	34
3.2.2	Beam shaping element	34
3.3	Characterization methods	37
3.3.1	Surface temperature measurement	37
3.3.2	Beam profile characterization	38
3.3.3	Topographical surface characterization	40
3.3.4	SEM and EDX surface characterization	41
4	Theoretical calculation of limits for the increase of volumetric ablation rate	43
4.1	Heat accumulation modeling for spatially shaped beams	44

4.1.1	Development of an analytical model for heat accumulation	45
4.1.2	Theoretical application of the model	48
4.1.3	Experimental validation of the analytical model	52
4.2	Ideal requirements on laser sources as well as beam shaping and guiding optics	57
5	Development of an advanced programmable beam shaping optics	61
5.1	Concept development for uniform beam shaping	61
5.2	Extension of the standard beam splitting algorithm	63
5.2.1	Predefined multi-spot distribution	66
5.2.2	Multi-spot distribution with constant spot number but varying positions	78
5.2.3	Random multi-spot distribution	79
5.3	Development of the double spatial light modulator setup	83
5.3.1	Laterally displaced double burst experiments	85
5.3.2	Novel optical setup for beam splitting and shaping	89
5.3.3	Beam shape definition procedure	90
5.3.4	Performance evaluation of the novel optical setup	92
5.4	Summary and outlook of the conducted optics development	97
6	Process development using flexible beam shaping	99
6.1	Scanning ablation strategy	99
6.1.1	Experimental procedure of scanning ablation	99
6.1.2	Application of 1D top-hats for scanning ablation	101
6.1.3	Application of 2D top-hats for scanning ablation	104
6.1.4	Hatching strategy as spatial profile averaging	108
6.2	Stamping ablation strategy	110
6.2.1	Stamping principle and procedure	110
6.2.2	Topographical surface qualification by laser scanning microscope and SEM	113
6.2.3	Qualification of modification of the chemical surface composition	117
6.2.4	Investigation into roughness and ablation rate	118
6.2.5	Investigation into the impact of wobbling radius	123
6.2.6	Laser stamping of an industrial workpiece	127
6.3	Calculation scheme for the prediction of ablation rates	128
7	Summary and outlook	133
	Bibliography	137
	List of author's publications	155
	Acknowledgements	157
