Contents

List of Figures	iii
List of Tables	vii
List of symbols	ix
1 Introduction	1
1.1 The need for a new simulation framework	1
1.2 State of the art	2
1.2.1 Multidisciplinary analysis and optimization in aeronautics	3
1.2.2 Multidisciplinary simulation frameworks in aeronautics	5
1.3 Objectives and thesis overview	8
2 Multidisciplinary analysis and optimization framework	11
2.1 Developed process and mixture of competences	11
2.2 General process overview	14
2.3 Aspects of computational implementation	16
3 Loads calculation process	19
3.1 Scope of computed load conditions	19
3.2 Loads calculation model	23
3.3 Electronic Flight Control System	28
3.3.1 General aspects of the Electronic Flight Control System	28
3.3.2 Manoeuvre load alleviation	29
3.3.3 EFCS parameter optimization	33
4 Structural property optimization and mass penalty estimation	39
4.1 Modeling aspects of global FEM representation	39
4.2 Global FEM external loading	42
4.2.1 Fuselage unitary load case approach	43
4.2.2 Wing box loading	43
4.3 Linear static analysis and results management	44
4.4 Wing structural property optimization	45
4.4.1 First approach - Fully Stressed Design using alteration of stress ratio based algorithm	45
4.4.2 Second approach - Fully Stressed Design using structural reserve factors	49
4.4.3 Fully Stressed Design - proposals for improvement	53
4.5 Fuselage mass penalty estimation	54
5 Feedback loop	61
5.1 Starting approach	61
5.2 Main process steps of the feedback loop	62

5.3	Update of stiffness values - equivalent beam approach	63
5.4	Update of mass values - grid point weight generator	66
5.5	Global convergence criteria	69
5.6	Impact of wing stiffness changes on the jig and flight shape	69
6	Design studies	71
6.1	Influence of the load alleviation function on the calculated flight loads . . .	73
6.2	First design study with reduced load case set	78
6.3	Design study with complete load case set	85
6.3.1	Structural baseline generation	85
6.3.2	Influence of load alleviation function on structural components . . .	89
7	Summary, discussion of methods and results, outlook	99
7.1	Summary	99
7.2	Discussion of methods	102
7.3	Discussion of results	103
7.4	Outlook	104
	Bibliography	105
A	Loads calculation and structural assessment	117
B	Feedback loop - main process steps	123
C	Equivalent beam approach - validation	127
D	Equivalent beam approach - influence of skin and stringer	131
E	Grid Point Weight Generator - basics	135
F	Influence of the load alleviation function on the calculated flight loads	139
G	Structural baseline generation	143
H	Influence of load alleviation function on structural components	147
