List of symbols	xxv
List of simulations	xliii
1 Introduction	1
1.1 Background	1
1.2 Motivation	3
1.3 Challenges	4
1.4 Expected physical processes in microgravity	5
1.5 Expected physical processes in Earth's gravity	7
1.6 Outline	9
2 Theoretical background	13
2.1 General accounting equations	13
2.2 General mass conservation equations	15
2.3 General linear momentum conservation equations	17
2.3.1 Linear momentum conservation equations in Cartesian coordinates	18
2.3.2 Linear momentum conservation equations in cylinder coordinates	19
2.4 General, internal energy conservation equations	20
2.4.1 Internal energy conservation equations in Cartesian coordinates	22
2.4.2 Internal energy conservation equations in cylinder coordinates	22
2.5 Heat transfer	23
2.5.1 Thermal conduction	23
2.5.2 Thermal convection	24
2.5.3 Radiation	25
2.6 Initial conditions, boundary conditions and approximations	27
2.6.1 Initial conditions	27
2.6.2 Approximations for the internal energy	28
2.6.3 Approximations for a compressible gas	28

Contents

2.6.4	Approximation for an incompressible liquid	29
2.6.5	Solid-fluid boundary conditions	29
2.6.6	Liquid-gas boundary conditions	30
2.6.7	Contact angle	32
3	Numerical background	35
3.1	Mass conservation equations	36
3.2	Momentum conservation equations	37
3.3	Fluid internal energy conservation equations	40
3.4	Solid energy conservation equations	42
3.5	Boundary conditions	42
3.6	Surface tension with wall adhesion	46
3.7	Phase change mass flux at a free surface	46
3.8	Solution method	48
4	State of the art	53
4.1	Flow through porous media	53
4.1.1	Governing equations	53
4.1.2	Correlations for three dimensional porous media	56
4.1.3	Correlations for two dimensional porous media	58
4.1.4	Compilation of flow through porous media correlations	62
4.1.5	Values of the flow through screen pressure loss coefficients	62
4.1.6	Dimensionless formulation	64
4.2	Joule-Thomson effect at porous media	68
4.2.1	Throttling of saturated parahydrogen gas at a screen	69
4.3	Radial wicking	71
4.4	Bubble point pressure	74
4.4.1	Values of the bubble point pressure	76
4.5	Capillary static of liquid-gas interfaces	77
4.5.1	Meniscus in Earth's gravity	79
4.5.2	Half-spherical meniscus in zero gravity	80
4.5.3	Nodoid meniscus in zero gravity	80
4.6	Capillary driven liquid rise in a cylindrical tube	81
4.7	Evaporation and condensation at free surfaces	85
5	Numerical simulation of governing physical processes	89
5.1	Macroscopic flow through screen pressure loss	90
5.1.1	Baffle component	91

Contents

5.1.2	Porous media model	98
5.2	Macroscopic radial inward wicking	105
5.2.1	Governing equations	106
5.2.2	Numerical setup	107
5.2.3	Results	109
5.3	Macroscopic bubble point pressure	112
5.3.1	Governing equations	112
5.3.2	Numerical setup	113
5.3.3	Results	117
5.4	Macroscopic capillary driven liquid rise in a cylindrical tube	119
5.4.1	Numerical setup	120
5.4.2	Results	125
6	Experiments	127
6.1	Experimental setup	127
6.1.1	Test facility	128
6.1.2	Test cell	132
6.1.3	Double screen element	133
6.1.4	Sensors	135
6.1.5	Actuators	136
6.1.6	Optical access	136
6.1.7	Materials and properties	140
6.2	Results in microgravity	144
6.2.1	Phenomenology	144
6.2.2	Parameter studies	146
6.2.3	Variation of the differential pressure	149
6.2.4	Variation of the superheating	154
6.2.5	Bubble development	158
6.2.6	Microgravity experiment without pressurization	161
6.3	Results in Earth's gravity	164
6.3.1	Phenomenology	164
6.3.2	Parameter study	167
6.3.3	Variation of the differential pressure	170
6.3.4	Bubble development	175
6.4	Comparison between experiments in Earth's gravity and microgravity	178
6.5	Effects of the applied stimuli	180
6.5.1	Ascending liquid film at the wall	181

Contents

6.5.2	Scenario A	184
6.5.3	Scenario B	185
6.5.4	Remaining experiments in Earth's gravity and microgravity	192
6.5.5	Influence of the screen superheating in scenario B	192
6.6	Possible error sources	197
6.7	Conclusion	198
6.7.1	General findings of the observed physical processes	199
6.7.2	Findings related to the screen saturation	201
6.7.3	Summary	203
7	Mathematical model	207
7.1	Assumptions	209
7.2	Liquid rise below the double screen element	211
7.3	Enclosed gas volume of the bubble below the lower screen in microgravity	214
7.4	Liquid rise between the screens of the double screen element	217
7.5	Enclosed gas volume of the bubble below the upper screen in microgravity	219
7.6	Liquid rise above the double screen element	220
7.7	Results	222
7.7.1	Earth's gravity experiments	223
7.7.2	Microgravity experiment V61a	231
7.7.3	Microgravity experiment V102a	234
7.7.4	Predicted degradations and effective screen areas open to gas flow	237
7.7.5	Predicted values for the comparison with numerical models	239
8	Numerical model without phase change	241
8.1	General procedure	242
8.2	Numerical setup	243
8.3	Results	246
9	Numerical model with phase change	249
9.1	General procedure	250
9.2	Numerical setup	252
9.2.1	First simulation - initial conditions	252
9.2.2	First restart simulations - liquid rise below the lower screen	256
9.2.3	Second restart simulation - radial inward wicking into the lower screen	265
9.2.4	Third restart simulations - liquid rise between the screens	272
9.2.5	Fourth restart simulation - radial inward wicking into the upper screen	279
9.2.6	Fifth restart simulation - liquid rise above the double screen element	284

Contents

9.3	Results	288
9.3.1	Fitting parameter	288
9.3.2	Initial conditions	290
9.3.3	Movement of the meniscus center point	291
9.3.4	Enclosed bubbles	299
9.3.5	Flow through screen pressure loss	301
9.3.6	Phase change phenomena	304
10	Conclusion	309
10.1	Development and operation of a cryogenic test facility in Earth's gravity and in microgravity	309
10.1.1	General findings of the observed physical processes	311
10.2	Theoretical investigation of the observed physical processes, with respect to the applied stimuli	313
11	Outlook	317
A	Appendix	319
A.1	Derivation of the analytical solution of the equation for the simplified capillary rise into the tube below the double screen element in microgravity	319
	List of Figures	321
	List of Tables	341
	Bibliography	347
