Nomenclature xi

Abstract xv

Zusammenfassung xvii

1 Introduction 1

2 State of the Art and Basic Knowledge 5
- 2.1 Reactor Design and Characterization . . . 5
  - 2.1.1 Fundamentals of Stirred Tank Reactor Design . . . 5
  - 2.1.2 Fundamental Theory of Power Input . . . 10
  - 2.1.3 Fundamental Theory of Mixing Behavior in Stirred Tanks . . . 16
- 2.2 Fundamentals of the Lagrangian Evaluation Approach . . . 29
  - 2.2.1 Analysis of Particle Displacement . . . 31
  - 2.2.2 Sojourn Time Distribution . . . 33
- 2.3 Conclusion . . . 35

3 Experimental Design and Procedure 37
- 3.1 3 L Lab Scale Stirred Tank Reactor Setup . . . 37
- 3.2 Local Mixing Time Determination . . . 40
- 3.3 4D Particle Tracking . . . 42

4 Experimental Results and Discussion 49
- 4.1 Hydrodynamic Characterization . . . 49
  - 4.1.1 Characterization of Stirred Tank Reactors by Means of the Volumetric Power Input . . . 56
  - 4.1.2 Characterization of Stirred Tank Reactors by Means of the Local Mixing Time Distribution . . . 60

4.1.3 Characterization of Stirred Tank Reactors by Means of the Local Propagation Time 69
4.2 Lagrangian Analysis of Particle Trajectories 72
4.2.1 Determination of Absolute Particle Dispersion in Stirred Tank Reactors 76

5 Conclusion **87**

Bibliography **91**

Appendix A Technical Data Sheets **97**

Appendix B Additional Velocity and Residence Time Plots **99**

Appendix C Overview of the Lagrangian Analysis Parameter and Results **101**
