Contents

Acknowledgment	I
Abstract	III
Nomenclature	IX
1 Introduction	1
1.1 Aim of this Work	3
1.2 Structure of this Work	3
2 Theoretical Background	5
2.1 Principle of Fluidization	5
2.1.1 Fluidization of Particle Collectives - Fluidized Beds	6
2.1.2 Pressure Drop	7
2.1.3 Determination of the Minimum Fluidization Velocity	9
2.1.4 Fluidization Behavior of Different Materials	10
2.2 Applications of the Fluidization Principle	12
2.2.1 Fluidized Beds	12
2.2.2 Spouted Beds	13
2.2.3 Rotary Granulators	15
2.3 Description of Dense Gas-Solid Flows	17
2.3.1 Gas Phase Properties and Characterization	17
2.3.2 Influence of Particle Properties	18
2.3.3 Description of Particle Behavior and Mixing Characteristics	20
2.3.4 Convection-Dispersion Model	21
2.4 Measurement Methods for the Characterization of Gas-Solid Flows	23
2.4.1 Optical and Non-Imaging Measurement Methods	23
2.4.2 Tomographic Methods	24
2.4.3 Single-Particle Detection Methods	25
2.5 Basics of CFD-DEM Simulations	26
2.5.1 Computational Fluid Dynamics	27
2.5.2 Discrete Element Method	28

3	Experimental Setup	33
3.1	Rotary Granulator Setup	33
3.2	Peripheral Equipment and Process Overview	36
4	Magnetic Particle Tracking System and Methodology	39
4.1	Magnetic Particle Tracking Principle	39
4.2	Magnetic Particle Tracking System	41
4.3	Data Handling and Raw Data Transformation	42
4.4	Selection and Production of Magnetic Tracers	45
4.4.1	Determination of Magnetic Material	45
4.4.2	Production of Coated Tracer and Bulk Particles	46
4.5	Validation of Measurement Accuracy	49
4.5.1	Static Position Detection	49
4.5.2	Comparison with Particle Image Velocimetry	50
5	Experimental Methods	57
5.1	Determination of Bulk and Tracer Particle Properties	57
5.1.1	Particle Size Distribution	57
5.1.2	Density	59
5.1.3	Young's Modulus	59
5.1.4	Moment of Inertia	59
5.1.5	Coefficient of Restitution	60
5.2	Influence of Tracer Particle Input Position	60
5.3	Parameters of CFD-DEM Simulations	62
5.4	Experimental Methods of the Magnetic Particle Tracking Measurements	64
5.5	Investigation of Transient Operation Regimes	64
6	Results and Discussion	65
6.1	Material Characterization	65
6.1.1	Particle Size Distribution, Sauter Mean Diameter and Sphericity	65
6.1.2	Coefficient of Restitution	68
6.1.3	Overview of Properties and Summary	69
6.2	Influence of Tracer Particle Input Position	73
6.3	Influence of Liquid on the Particle Dynamics	77
6.3.1	Comparison of CFD-DEM Simulations and Experimental Data	77
6.3.2	Influence of Liquid Volume Ratio	84
6.3.3	Influence of Liquid Viscosity	88
6.3.4	Summary	88

6.4	Characterization of the Particle Dynamics	91
6.4.1	Application of the Convection-Dispersion Model	91
6.4.2	Self-Developed Model Consisting of Characteristic Numbers	95
6.4.3	Model Results and Comparison - Liquid Volume Ratio	98
6.4.4	Model Results and Comparison - Liquid Viscosity	104
6.4.5	Summary	106
6.5	First-Time Investigation of Transient Processes by Magnetic Particle Tracking	106
7	Conclusion	113
	Bibliography	117
	Appendices	131
A	Hertzian Contact Theory	131
B	Photograph of Rotary Granulator Setup	132
C	Additional Data: Influence of Volume Ratio	133
D	Water-Glycerine Mixture Properties	134
E	Additional Data: Influence of Viscosity	135
F	Additional Data: Model Comparison	136
