

# Table of Contents

<b>Abstract</b>	<b>iii</b>
<b>Kurzfassung</b>	<b>v</b>
<b>List of Publications</b>	<b>vii</b>
<b>Acknowledgements</b>	<b>ix</b>
<b>1 Introduction</b>	<b>1</b>
1.1 High-power GaAs-based broad-area diode lasers . . . . .	1
1.2 Scope and structure of this work . . . . .	6
<b>2 Research Methods and Techniques</b>	<b>9</b>
2.1 Device modeling and simulation tools . . . . .	9
2.2 Device fabrication technology . . . . .	11
2.3 Characterization techniques and measurement setups . . . . .	15
<b>3 Literature Review</b>	<b>19</b>
3.1 Performance of state-of-the-art devices . . . . .	19
3.2 Limiting factors to device performance . . . . .	22
3.2.1 Thermal mechanisms . . . . .	22
3.2.2 Non-thermal mechanisms . . . . .	24
3.3 Previous lateral design approaches: benefits and limitations . . . . .	26
<b>4 Enhanced Self-Aligned Lateral Structure (eSAS)</b>	<b>33</b>
4.1 Device design and simulation results . . . . .	34
4.1.1 Vertical (epitaxial) layer structure . . . . .	34
4.1.2 eSAS first variant (V1): lateral structure design . . . . .	36
4.1.3 eSAS second variant (V2): lateral structure design . . . . .	38
4.1.4 Estimated performance benefits . . . . .	44
4.2 eSAS first variant (V1): realization and quality control . . . . .	47
4.3 eSAS second variant (V2): realization and quality control . . . . .	49
4.4 Device characterization and measurement results . . . . .	55
4.5 Overview and outlook . . . . .	66

## TABLE OF CONTENTS

---

<b>5</b>	<b>Chip-Internal Thermal Path Engineering: Design and Outlook</b>	<b>69</b>
5.1	Motivation and prior art . . . . .	69
5.2	Thermal simulation model . . . . .	70
5.3	Thermal simulation results and analysis . . . . .	72
<b>6</b>	<b>Summary and Conclusion</b>	<b>77</b>
	<b>List of Figures</b>	<b>81</b>
	<b>List of Tables</b>	<b>83</b>
	<b>Symbols and Acronyms</b>	<b>85</b>
	<b>References</b>	<b>87</b>
