Contents

1	Inti	roducti	on	1
	1.1	Applic	eations of capillary transport	2
		1.1.1	Propellant Management Devices	2
		1.1.2	Heat Pipes	4
	1.2	Embe	lment of this work in the frame of PoreNet	5
	1.3	Questi	ions and aims of this work	6
Ι	Fu	ndam	nental discussion of capillary flow	9
2	The	eory of	capillary dominated flows - State of the art	11
	2.1	Litera	ture review	11
		2.1.1	Capillary rise	11
		2.1.2	Porous media	13
	2.2	Pore s	tructure parameters and analogies	15
		2.2.1	Porosity	15
		2.2.2	The Darcy law and extensions	16
		2.2.3	Static radius	17
	2.3	Radia	capillary transport	18
	2.4	Linear	flow in a tube: Governing equations $\ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots$	19
		2.4.1	Meniscus details	19
		2.4.2	Mass balance	21
		2.4.3	Energy balance	22
		2.4.4	Linear momentum balance in z direction	22
		2.4.5	Gravity force and inclination	27
		2.4.6	Simplified linear momentum balance and corresponding assumptions	29
	2.5	Equat	ion for porous media using the Darcy law	30

	2.6	Radial flow in porous media: Governing equations	31
		2.6.1 Mass balance	31
		2.6.2 Linear momentum balance in radial direction	32
3	Din	nensionless scaling methods for capillary rise 3	35
	3.1	Introduction	35
	3.2	Dimensionless scaling	36
		3.2.1 Viscous effects and gravity as scaling forces (index \dagger)	37
		3.2.2 Inertia and gravity as scaling forces (index ‡)	39
		3.2.3 Inertia and viscous effects as scaling forces (index *)	10
	3.3	Discussion	12
	3.4	Conclusion	13
	3.5	Excursion - Applying the Buckingham π Theorem	14
4	The	e transition from inertial to viscous flow 4	19
	4.1	Introduction	19
	4.2	Analytical solutions for defined time domains	50
		4.2.1 Purely inertial time domain	50
		4.2.2 Visco-inertial time stage	50
		4.2.3 Purely viscous time stage	50
		4.2.4 Viscous and gravitational time stage	51
	4.3	Separation of time stages	51
	4.4	Discussion in dimensionless form	54
	4.5	Conclusion	56
5	Ana	alytical solutions including the gravity term 5	57
	5.1	Introduction	57
	5.2	Viscous dominated flow	58
	5.3	Viscous and hydrostatic dominated flow regime	59
		5.3.1 Practical evaluation of the Lambert W function	33
		5.3.2 Time to reach the equilibrium height $\ldots \ldots \ldots$	33
		5.3.3 Flow velocity	34
		5.3.4 Dimensional analysis	35
	5.4	Validity of the Lucas-Washburn equation	36
	5.5	Experimental evidence	38

	5.6	Evalu	ation for a general initial condition	. 70
		5.6.1	Time to reach the equilibrium height	. 72
		5.6.2	Comparison with experimental results from literature \ldots	. 73
	5.7	Concl	usion	. 74
6	A b	asic m	nacroscopic numerical simulation with FLOW-3D	77
II	\mathbf{S}_{j}	pecia	l investigated cases	81
7	Line	ear caj	pillary rise and the effect of evaporation	83
	7.1	Introd	luction	. 83
	7.2	Applie	cable equations (no evaporation)	. 83
	7.3	Exper	iments	. 85
		7.3.1	Porous materials and fluid properties	. 85
		7.3.2	Experimental setup and data acquisition	. 88
		7.3.3	DTW: capillary rise experiments - height approach	. 90
		7.3.4	DTW: capillary rise experiments - mass approach	. 93
		7.3.5	Filter frits: capillary rise experiments - mass approach \ldots	. 98
		7.3.6	DTW: The effect of evaporation $\ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots$. 101
	7.4	Applie	cable equations (evaporation)	. 103
	7.5	Analy	tical solution	. 106
		7.5.1	Dimensional analysis	. 107
		7.5.2	Time needed to reach 0.99 h_{eq}	. 108
		7.5.3	Evaluation of the model with experimental data (DTW) $\ . \ . \ . \ .$. 109
	7.6	Concl	usion	. 113
8	Rad	lial caj	pillary transport	115
	8.1	Applie	cable equations	. 115
	8.2	2 Experimental Apparatus		
	8.3	3 Results		
		8.3.1	Reference measurement - linear transport	. 125
		8.3.2	Radial outward wicking	. 126
		8.3.3	Overview on obtained wicking constants	. 131
		8.3.4	Dimensionless presentation	. 131
	8.4	Discus	ssion	. 132

	8.5	Conclusion	.35	
9 Summary				
	9.1	Dimensionless scaling methods	.37	
	9.2	Transition between different time regimes	.38	
	9.3	Analytical solutions including the gravity term	.38	
	9.4	Macroscopical numerical simulation	.39	
	9.5	Capillary rise and the effect of evaporation	.40	
	9.6	Radial capillary transport	.40	
	9.7	Pore structure parameters	.41
