Zusammenfassung	xxi
Abstract	xxiii
1 Introduction	1
1.1 Motivation and Goals of the Thesis	2
1.2 Contributions	4
2 Theoretical Foundation	9
2.1 Lithium-Ion Cell Fundamentals	9
2.1.1 Operational Principles and Functionality	9
2.1.2 Cell Open Circuit Voltage	15
2.1.3 Cell Overvoltage	16
2.1.4 Cell Packaging Shapes	17
2.2 Cell Degradation and Loss Mechanisms	19
2.2.1 Loss of Lithium Inventory	22
2.2.2 Loss of Active Material at the Anode	24
2.2.3 Loss of Active Material at the Cathode	26
2.2.4 Cell Degradation Inhomogeneity	27
2.3 Cell Modeling	28
2.3.1 Cell Modeling Approaches	28
2.3.2 Characterization in Frequency and Time Domain	32
2.4 State-of-Health Estimation Methods	33
2.4.1 Differential Voltage Analysis	33
2.4.2 Incremental Capacity Analysis	34
2.4.3 Model-Based State Observer	35
2.4.4 Artificial Neural Networks	36

2.4.5	Empirical Methods	36
3	Fractional-Order Electrical Cell Model	39
3.1	Equivalent Circuit Model	39
3.1.1	Model Structure	39
3.1.2	Forward Voltage Calculation	44
3.1.3	Thermal Power Loss Calculation	45
3.1.4	On-Board Estimation Quality Assessment	45
3.2	Data Acquisition and Internal Resistance Reference Values	47
3.3	Model Parameter Identification	47
3.3.1	Model BOL Parameterization	48
3.3.2	Parameter Evolution over Aging	49
3.3.3	On-Board Parameter Tracking	55
3.4	Implementation and Operational Strategy	59
3.4.1	Model Reinitialization at Vehicle Ignition	59
3.4.2	Embedded Discrete-Time Implementation	62
3.4.3	Numerical Precision and Memory Management	65
3.4.4	Computational Complexity and Static Code Analysis	66
3.5	Validation Results	68
3.5.1	State-of-Health-Resistance Estimation	68
3.5.2	Open Circuit Voltage Estimation	75
3.5.3	Estimation Error Quantification	76
4	Modal Differential Voltage Analysis	77
4.1	Dataset Specification and Reference Values	77
4.2	Modal Decomposition of Differential Voltage Curves	79
4.3	Modal Coordinates Estimation	85
4.3.1	Modal Coordinates Batch Estimation	86
4.3.2	Modal Coordinates Aging Dependency	90
4.4	Validation Results	92
4.4.1	State-of-Health-Capacity	92
4.4.2	Loss of Lithium Inventory	93
4.4.3	Loss of Active Material at the Anode	94
4.4.4	Loss of Active Material at the Cathode	95
4.4.5	State-of-Health-Inhomogeneity	96
5	On-Board Implementation of the Differential Voltage Analysis	99
5.1	Setup of the Full Estimation Algorithm	99
5.2	Data Acquisition and Capacity Reference Values	100

5.3	Model-Based Overvoltage Compensation	102
5.4	Real-Time Filtering and Differentiation	104
5.5	Modal Differential Voltage Analysis	105
5.5.1	Modal Decomposition of Differential Voltage Curves	105
5.5.2	Recursive Modal Coordinates Estimation	106
5.6	Validation Results	109
5.6.1	Model-Based Temperature Dependency Compensation	109
5.6.2	Modal Coordinates Aging Dependency	111
5.6.3	State-of-Health-Capacity Estimation	111
5.6.4	Start State-of-Charge Dependency	114
5.6.5	End State-of-Charge Dependency	117
5.6.6	Charging Power Dependency	119
6	Conclusion and Outlook	123
A	Optimization Results	127
B	Thermal Cell Model	131
	Bibliography	133
	Curriculum Vitae	169
	List of Figures	171
	List of Tables	175
