

Table of Contents

1.Introduction.....	1
1.1 Motivation	1
1.2 Hydrogen development and application	4
1.2.1 Industry	6
1.2.2 Transportation	7
1.2.3 Power generation	8
1.2.4 Construction	9
1.3 Geological sites for UHS	10
1.3.1 Salt cavern.....	11
1.3.2 Depleted hydrocarbon reservoirs	14
1.3.3 Aquifer	17
1.3.4 Lined rock	18
1.3.5 Implemented and planned projects summary.....	20
1.4 Multi-functional salt cavern hydrogen storage	22
1.5 Research objectives and challenges.....	25
1.6 Thesis outline.....	27
2. Fundamentals of salt constitutive laws and salt cavern behaviors	30
2.1 Dislocation mechanism and constitutive models.....	30
2.1.1 Dislocation mechanism	30
2.1.2 Hou/Lux constitutive model.....	32
2.1.3 BGRa constitutive model.....	36
2.2 Theoretical background of hydraulic and thermodynamic behavior of salt cavern	36
2.2.1 Multiphase and component flow in porous medium.....	37
2.2.2 Heat conservation.....	39
2.2.3 Relative permeability functions	41
2.2.4 Capillary pressure functions	43
2.3 TOUGH2MP simulator	43
2.3.1 EOS3 and EOS5 model.....	44

2.2.2 Space and time discretization.....	45
2.3.3 Solution method.....	48
2.3.4 EOS module verification.....	49
2.4 FLAC 3D simulator.....	53
3. Site selection of UHS in bedded rock salt.....	56
3.1 Site selection concepts.....	56
3.2 Simulation setup and schemes.....	57
3.2.1 Generic model for site selection.....	57
3.2.2 Initial conditions and boundary settings.....	58
3.2.3 Simulation properties.....	59
3.3 Site selection evaluation without interlayer.....	60
3.3.1 Impacts of rock salt permeability.....	60
3.3.2 Impacts of rock salt porosity.....	64
3.3.3 Impacts of cap rock properties.....	65
3.3.4 Impacts of thickness of roof salt.....	68
3.3.5 Impacts of operating pressure.....	69
3.4 Site selection assessment with interlayer.....	70
3.4.1 Thickness of 4 m.....	71
3.4.2 Thickness of 2 m.....	76
3.5 Comparison with CAES site selection.....	78
3.5.1 Impacts of rock salt permeability.....	78
3.5.2 Impacts of interlayer.....	80
3.6 Summary.....	84
4. Feasibility of short-term storage for UHS in Anning salt mine.....	86
4.1 Short-term storage concepts.....	86
4.2 Anning salt mine.....	86
4.2.1 Geological conditions of Anning salt mine.....	86
4.2.2 Hydrogeological conditions.....	88
4.2.3 Sealability of caprock.....	89
4.3 Simulation setup and schemes.....	91

4.3.1 Simulation model based on Anning salt mine	91
4.3.2 Initial conditions and boundary settings	92
4.3.3 Simulation properties	93
4.3.4 Model verification.....	94
4.4 Thermal dynamic and hydraulic response	95
4.4.1 Storage for 7 Cycles.....	95
4.4.2 Storage for 30 cycles.....	99
4.4.3 Storage for 100 cycles.....	100
4.5 Permeation prediction.....	102
4.6 Mechanical response of rock salt.....	105
4.6.1 Evaluation criteria.....	105
4.6.2 Evaluation results.....	108
4.7 Impact of salt permeability	110
4.7.1 Pressure change.....	110
4.7.2 Temperature change.....	113
4.7.3 Hydrogen penetration.....	113
4.8 Impact of injection plan	116
4.8.1 Injection plan I.....	116
4.8.2 Injection plan II.....	118
4.8.3 Injection plan III	120
4.9 Summary.....	121
5. Feasibility of long-term storage for UHS in Anning salt mine.....	123
5.1 Long-term storage concepts.....	123
5.2 Simulation setup and schemes	123
5.2.1 Simulation model based on Anning salt mine	123
5.2.2 Initial conditions and boundary settings	124
5.2.3 Simulation properties	125
5.3 Stability and usability	125
5.3.1 Stability analysis	125
5.3.2 Usability analysis	126

5.4 Hydraulic evaluation.....	127
5.5 Summary.....	128
6. Conclusions and outlook.....	129
