Table of Contents

Summary	XIII
Zusammenfassung	XV
1 Introduction	1
2 Objectives	4
3 Theoretical Background	5
3.1 <i>Corynebacterium glutamicum</i> as Biotechnological Production Strain	5
3.2 Industrial Methionine Production	6
3.3 Metabolic Pathways in <i>C. glutamicum</i> Involved in Methionine Biosynthesis	7
3.3.1 Central carbon metabolism	7
3.3.2 Methionine metabolism	9
3.3.3 Sulfur metabolism.....	11
3.3.4 Utilization of alternative sulfur sources	12
3.3.5 Regulation of methionine metabolism	14
3.4 Systems Metabolic Engineering of <i>C. glutamicum</i>	16
3.4.1 Systems level profiling	17
3.4.2 Targeted genetic engineering	22
3.5 Metabolic Engineering for Improved Methionine Production	24
4 Material and Methods	26
4.1 Strains and Plasmids	26
4.2 Chemicals	27
4.3 Growth Media	28
4.3.1 Complex media	28
4.3.2 CG12½ minimal medium.....	30
4.4 Cultivation	32
4.4.1 Strain conservation in stock cultures	32
4.4.2 Cultivation in shake flasks	32
4.4.3 Cultivation in bioreactor	32
4.5 Genetic Engineering	33
4.5.1 Nucleic acid isolation.....	33
4.5.2 Polymerase chain reaction	33
4.5.3 Gel electrophoresis	35
4.5.4 Construction of cloning vectors	36
4.5.5 Transformation.....	37

4.6	Analytical Techniques	39
4.6.1	Determination of cell concentration	39
4.6.2	Sugars and organic acids	40
4.6.3	Amino acids and intermediates of methionine biosynthesis.....	40
4.6.4	Intermediates of glycolysis, pentose phosphate pathway and TCA cycle	42
4.6.5	Analysis of volatile sulfur compounds	44
4.6.6	Electron microscopy.....	44
4.6.7	Preparation of cell extracts	44
4.6.8	Enzyme assays	45
4.7	Metabolomics	46
4.7.1	Sampling by fast filtration.....	46
4.7.2	Sampling by methanol quenching	47
4.7.3	Sampling by whole culture quenching	47
4.7.4	Metabolite extraction.....	47
4.7.5	Nicotinamide adenine dinucleotides	48
4.8	Fluxomics.....	49
4.8.1	¹³ C tracer studies	49
4.8.2	Metabolic modeling	51
4.9	Metabolic Pathway Analysis	52
5	Results and Discussion.....	53
5.1	Analytical Strategies for Metabolomics.....	53
5.1.1	Intracellular amino acids	54
5.1.2	Impact of the washing solution during fast filtration	57
5.1.3	Intermediates from glycolysis, PPP and TCA cycle.....	58
5.1.4	Methanol quenching and fast filtration as sampling methods for yeast	60
5.1.5	Metabolome analysis without cell separation during sampling.....	64
5.2	Towards Reliable Quantification of Intracellular Metabolites.....	67
5.2.1	Design of an analytical strategy	67
5.2.2	Validation by adenylate energy charge	68
5.2.3	Mass action ratios of enzymes of <i>C. glutamicum</i>	71
5.3	Alternative Isoleucine Biosynthesis in <i>C. glutamicum</i> Δ<i>mcbR</i>	73
5.4	NADPH Metabolism for Methionine Biosynthesis	74
5.5	Engineering of the NADPH Supply in <i>C. glutamicum</i>	75
5.5.1	Strain construction and validation	76
5.5.2	Impact of up-regulated <i>tkt</i> -operon on growth physiology	77
5.5.3	Pathway fluxes	78
5.5.4	Intracellular redox-state.....	82
5.6	Alternative Sulfur Sources for <i>C. glutamicum</i>	83
5.6.1	Utilization of methanethiol and dimethyldisulfide as sole sulfur source.....	83
5.6.2	Incorporation of reduced sulfur into methionine.....	84
5.6.3	Identification of the catalyzing enzyme	88
5.6.4	<i>In vitro</i> activity of <i>O</i> -acetylhomoserine sulfhydrylase	89
5.6.5	Overexpression of <i>O</i> -acetylhomoserine sulfhydrylase.....	89
5.6.6	<i>In silico</i> prediction of maximum methionine yield	90
5.7	S-Adenosylmethionine Formation in <i>C. glutamicum</i>	91

6	<i>Conclusions and Outlook</i>	96
7	<i>Abbreviations and Symbols</i>	99
8	<i>References</i>	103
9	<i>Appendix</i>	117
9.1	Media and Cultivation of Microorganism in Metabolomics	117
9.2	Reactions for Metabolic Pathway Analysis	120
9.3	Metabolic Flux Analysis Data	121
