List of Figures ..... **XIII**
List of Tables ..... **XIX**
Abbreviations ..... **XXI**
1 Introduction **1**
1.1 Flowsheet simulation 2
1.2 Complexity of solids 4
1.3 Dynamic simulation 6
1.4 State of the art 7
1.5 Outline of the work 11
2 Dyssol and its applications **13**
2.1 Software architecture 13
2.1.1 Flowsheet 14
2.1.2 Simulator 15
2.1.3 Equations solvers 16
2.1.4 Material stream 17
2.1.5 Unit 21
2.1.6 Materials database 26
2.1.7 Data storage 27
2.1.8 User interface 28
2.2 Applications of Dyssol 28
3 Paper 1: Novel system for dynamic flowsheet simulation of solids processes **41**
3.1 Abstract 42
3.2 Introduction 42
3.3 Architecture of the Dyssol simulation system 46
3.3.1 Structure of material stream 48
3.3.2 Interfaces of units and solvers 50
3.4 Calculation algorithm 51
3.4.1 Modular approach 52

Dieses Werk ist copyrightgeschützt und darf in keiner Form vervielfältigt werden noch an Dritte weitergegeben werden.
Es gilt nur für den persönlichen Gebrauch.

3.4.2 Topology analysis 53
3.4.3 Waveform relaxation method 54
3.4.4 Application of the convergence methods 55
3.4.5 Extrapolation algorithms 57
3.5 Handling of multidimensional distributed parameters of solids 57
3.5.1 Sparse data format 58
3.5.2 Transformation matrices 61
3.6 Storage subsystem and optimisation of the data organisation 63
3.6.1 Data caching 63
3.6.2 Data storage 63
3.7 Validation of the system and performance analysis 64
3.8 Conclusions 73
3.9 Acknowledgements 74
4 Paper 2: Investigation of an FFT-based solver applied to dynamic flowsheet simulation of agglomeration processes 75
4.1 Abstract 76
4.2 Introduction 76
4.3 Continuous fluidised bed agglomeration 77
4.4 Application of FFT to solve the PBE for agglomeration 78
4.5 Dynamic flowsheet simulation in Dyssol 81
4.6 Reference flowsheets of the continuous fluidised bed agglomeration process 84
4.7 Case studies and performance analysis 88
4.7.1 Influence of the approximation rank 89
4.7.2 Performance analysis – Flowsheet 1 90
4.7.3 Performance analysis – Flowsheet 2 93
4.8 Conclusions 96
4.9 Acknowledgements 97
5 Paper 3: Application of transformation matrices to the solution of population balance equations 99
5.1 Abstract 100
5.2 Introduction 100
5.2.1 Flowsheet simulation of solid phase processes 101
5.2.2 Use of population balance equations for particulate processes 102
5.3 Mathematical formulations 104

5.3.1 Transformation matrices 104
5.3.2 Agglomeration 109
5.3.3 Breakage 112
5.4 Implementation details 114
5.4.1 Dynamic flowsheet simulation in Dyssol 114
5.4.2 Application of transformation matrices 115
5.4.3 Implementation of units 118
5.5 Simulation examples 121
5.5.1 Agglomeration 121
5.5.2 Breakage 125
5.5.3 Coupled agglomeration and breakage 128
5.6 Conclusions 132
5.7 Author contributions 133
5.8 Funding 133
5.9 Conflicts of interest 133
5.10 Notation 133
6 Paper 4: Dyssol—An open-source flowsheet simulation framework for particulate materials 137
6.1 Abstract 138
6.2 Code metadata 138
6.3 Software metadata 138
6.4 Motivation and significance 139
6.5 Software description 140
6.5.1 Methods 140
6.5.2 Software architecture 141
6.5.3 Implementational aspects 142
6.5.4 Software functionalities 142
6.6 Illustrative example 143
6.7 Impact 147
6.8 Conclusions 149
6.9 Declaration of competing interest 149
6.10 Acknowledgement 149
7 Paper 5: Use of multiscale data-driven surrogate models for flowsheet simulation of an industrial zeolite production process 151
