Abstract.....	I
Zusammenfassung	II
Declaration of Originality / Eidesstattliche Erklärung.....	III
Acknowledgements.....	V
List of Contents.....	1
1. Introduction	3
1.1 Motivation	3
1.2 Approaches	6
2. Basic Principles	8
2.1. High radiance laser diodes and tapered amplifiers.....	8
2.2. Beam combining techniques for power scaling.....	12
2.3 Coherent beam combining.....	14
2.4 Nonlinear conversions methods.....	16
3. Advances in Coherent Beam Combining	20
3.1 Macroscopic study of a CBC system.....	20
3.1.1 Tabletop setup design	20
3.1.2 Semiconductor laser and amplifier properties	21
3.1.3 Performance of the tabletop CBC system.....	31
3.1.4 Phase-locking control	33
3.2 Miniaturization of a coherent beam combining system.....	37
3.2.1 Optical simulations and design	37
3.2.2 Characterizations and performance of the CBC laser module	39
3.3 Discussion on the coherent beam combining results.....	46
4. Outcomes in the non-linear conversions.....	48
4.1 Second harmonic generation at 380.55 nm by using a CBC as a seed	48
4.1.1 Periodically-poled stoichiometric LiTaO ₃ doped with MgO crystal	48
4.1.2 Preliminary characterization	49
4.1.3 Second harmonic generation performance.....	54
4.2 Sum frequency generation at 253.7 nm by using a coherent combined beam and its doubled frequency as seeds.....	58
4.2.1 Periodically-poled LaBGeO ₅ bulk crystal	58

4.2.2	Sum frequency generation performance.....	61
4.3	Discussion on the non-linear conversions results	66
5.	Conclusions and future perspectives.....	68
6.	Bibliography	71
	Publications of the author.....	77
	Appendix	78
I	Reversed hill climbing algorithm for phase lock of a coherently combined system	78
II	Phase lock device.....	84
III	Instructions of operation for the phase control device	85
