

Table of contents

Acknowledgments	I
Abstract	II
1 Introduction	1
1.1 Background and motivation	1
1.2 State of the art	4
1.2.1 Carbon geological utilization and storage technologies	4
1.2.2 Underground hydrogen storage technologies	12
1.2.3 Microbial metabolisms related to UBM	14
1.2.4 Studies related to UBM	16
1.3 Research gaps and objectives	35
1.4 Thesis outline	35
2 Site selection for underground bio-methanation	38
2.1 Evaluation criteria system	38
2.1.1 Technology (C1)	38
2.1.2 Safety (C2)	40
2.1.3 Society (C3)	41
2.1.4 Economy (C4)	42
2.2 Integrated multi-criteria decision-making approach	43
2.2.1 Information processing	44
2.2.2 Criterion weight calculation	45
2.2.3 Alternative ranking	47
2.3 Case study	49

2.3.1 Background and overview	49
2.3.2 Optimal site selection	50
2.4 Discussion	54
2.4.1 Sensitivity analysis	54
2.4.2 Comparative analysis	57
2.5 Summary	58
3 Biogeochemical modelling approach	59
3.1 Overview	59
3.2 Biochemical kinetic models	59
3.3 Geochemical equilibrium models	61
3.3.1 Gas dissolution	61
3.3.2 Aqueous reactions	62
3.3.3 Mineral dissolution and precipitation	64
3.4 Model validation	64
3.5 Summary	65
4 Impacts of microbial competition on underground bio-methanation	67
4.1 Parameter description	67
4.2 Analysis of microbial metabolism	69
4.2.1 Methanogenesis	70
4.2.2 Acetogenesis	72
4.2.3 Sulfate reduction	74
4.2.4 Three microbial metabolisms	76
4.3 Sensitivity analysis	80

4.3.1 Reservoir condition	80
4.3.2 Substrate availability.....	85
4.3.3 Microbial kinetic parameters	90
4.4 Summary.....	94
5 Impacts of cyclic underground bio-methanation on the gas-water-rock system	97
5.1 Methodology	97
5.1.1 Simulation approach	97
5.1.2 Validation of coupled approach	99
5.2 Results and discussion	99
5.2.1 Impact on rock porosity and gas conversion	100
5.2.2 Impact on water salinity and gas conversion	103
5.2.3 Impact on storage capacity and gas conversion	106
5.2.4 Impact on reservoir temperature and gas conversion	107
5.3 Summary.....	112
6 Conclusions and outlook.....	114
References	117
