Abstract	13
List of figures.....	15
List of tables.....	21
List of symbols.....	23
List of abbreviations.....	29
1 Introduction	31
2 Theoretical background.....	37
2.1 Game theory.....	38
2.1.1 Concept of game theory	39
2.1.2 Variants of games.....	43
2.1.3 Nash equilibria	50
2.1.4 Competition configuration and game theory	58
2.1.5 Risk aversion.....	63
2.1.6 Reaction function	69
2.2 Choice modelling	72
2.2.1 Platform selection and location based on Hotelling model ...	73
2.2.2 Discrete choice model	79
2.3 Two- and multi-sided software platform markets	90
2.3.1 Definition	91
2.3.2 Structure of multi-sided markets	99
2.3.3 Technology dynamics	107
2.3.4 Homing of agents	110
2.3.5 Features governing agents' utility	113

Table of content

2.3.6	Fee and price structures	126
2.3.7	Market dynamics and long-term equilibria	134
2.3.8	Stable equilibria for sigmoid response functions	144
2.3.9	Critical mass threshold.....	153
2.3.10	Equilibria under competing platforms.....	155
3	Strategies in multi-sided markets	165
3.1	Ignition strategies to overcome critical mass thresholds	166
3.1.1	Subsidies and pricing discounts	168
3.1.2	Seeding	171
3.1.3	Marquee actors.....	173
3.1.4	Single side entry	174
3.1.5	Piggybacking	176
3.1.6	Micro market launch.....	180
3.1.7	Opening up.....	182
3.1.8	Big bang marketing.....	184
3.1.9	Comparison of strategies	185
3.2	Pricing strategies.....	189
3.2.1	Optimized variable fee pricing.....	189
3.2.2	Optimized fixed fee pricing	196
3.2.3	Optimized fixed and variable fee structures	201
3.2.4	Skewed pricing	203
3.2.5	Price discrimination	206
3.3	Competition strategies	211
3.3.1	Entry deterrence.....	212
3.3.2	Exclusivity concepts	219
4	Methodology	223
4.1	Model formulation.....	224
4.1.1	Market setup	224

4.1.2	Game setup.....	227
4.1.3	Behaviour of consumers.....	231
4.1.4	Behaviour of complementors	241
4.1.5	Profits of platform owner	254
4.1.6	Key parameters	257
4.2	Second stage: Equilibria of participation rates of complementors and consumers	266
4.2.1	Equilibrium condition	266
4.2.2	Types of equilibria constellations for competing platforms	267
4.2.3	Implications of perturbations	275
4.3	First stage: best pricing strategies for platform owners	279
4.3.1	Reaction function for two-sided markets with two platforms	280
4.3.2	Optimal pricing strategies with variable and fixed fees	282
4.3.3	Handling multiple second-stage equilibria.....	290
4.3.4	Implications on monopoly and oligopoly formation for different types of second stage equilibria	292
4.3.5	Example of reaction function	295
4.4	Limits and criteria for a stable platform.....	297
4.4.1	Maximum number of platforms per market	297
4.4.2	Maximum number of complementors per platform	299
4.4.3	Minimum number of complementors for sufficient consumer benefits	301
4.4.4	Minimum number of consumers to sustain complementors and platforms	302
4.5	Simple examples of platform strategies and equilibria	303
4.5.1	Monopoly or one platform case	303
4.5.2	Two symmetric platforms	309
4.6	Summary of the methodological approach.....	313

5	Platform strategies for two competing platforms	317
5.1	Second stage: Participation rates of complementors and consumers.....	317
5.1.1	Condition for equilibria	318
5.1.2	Total derivative of equilibrium condition	320
5.1.3	Parameter thresholds for stable equilibria.....	322
5.1.4	Number of equilibria and location	325
5.2	First stage: Platform profit optimization.....	329
5.3	Matlab program for numerical optimization.....	333
5.3.1	Function 1: Derivation of equilibrium consumer and complementor participation rates at given threshold values	333
5.3.2	Function 2: Derivation of maximum profit for given threshold value	336
5.3.3	Function 3: Compilation reaction function of profit-maximizing responses.....	338
5.3.4	Function 4: Compilation of overarching structure of Nash equilibria	339
5.4	Numerical optimization	341
5.4.1	Second stage analysis.....	342
5.4.2	First stage analysis	362
5.4.3	Variations of consumer benefits and complementor heterogeneity.....	388
5.4.4	Key findings from numerical optimization.....	396
6	Applied case study	399
6.1	Consumers as users of mobile phones	400
6.1.1	Market share of platforms.....	401
6.1.2	Consumer spending for applications.....	403
6.1.3	Smartphone prices	405
6.1.4	Multiple smartphones per user.....	407

6.1.5 Implications for method application	409
6.2 Complementors as application developers	410
6.2.1 Android applications	410
6.2.2 iOS applications	413
6.2.3 Application development	414
6.2.4 Share of developers per platform	416
6.3 Determination of key parameters	417
6.3.1 Normalized consumer benefit	418
6.3.2 Complementor heterogeneity	422
6.3.3 Relative cost of entry	426
6.3.4 Threshold value and variable fees	428
6.4 Methodology application	429
6.4.1 Applicability of the model	429
6.4.2 Recommendations on threshold value settings by model....	430
6.4.3 Model adaptation to different hardware costs	438
6.4.4 Key findings	442
7 Summary	445
Appendix: Matlab Code	455
