Table of Contents

1	ABSTRACT	1
2	ZUSAMMENFASSUNG.....	2
3	INTRODUCTION	3
3.1	General Introduction.....	3
3.2	Objectives of the Thesis	4
4	THEORETICAL BACKGROUND.....	6
4.1	Systems Biology	6
4.2	<i>Aspergillus niger</i> – an Efficient Industrial Host.....	6
4.2.1	Biotechnological relevance and application.....	6
4.2.2	Genome	7
4.2.3	Carbon core metabolism.....	8
4.2.3.1	Substrate assimilation and catabolic break down.....	8
4.2.3.2	Supply of reducing power	11
4.2.3.3	Tricarboxylic acid cycle and glyoxylate bypass.....	12
4.2.4	Anabolism and cell compounds.....	13
4.2.5	Recombinant protein production	16
4.2.5.1	Glucoamylase.....	16
4.2.5.2	β -Fructofuranosidase.....	17
4.2.5.3	Epoxide Hydrolase.....	19
4.2.6	Metabolic modelling of <i>A. niger</i> and their applications.....	20
4.3	Mathematical Modelling of Metabolic Networks	21
4.4	Metabolic Network Analysis.....	22
4.4.1	Prerequisites	22

4.4.2	Set-up of the stoichiometric matrix	24
4.4.3	Elementary flux mode analysis	25
4.4.4	Metabolic flux analysis.....	28
4.4.4.1	Black box elementary balancing	28
4.4.4.2	Metabolite balancing.....	30
4.4.4.3	Degrees of freedom of the metabolic system	31
4.4.5	Flux balance analysis.....	32
4.4.6	Rational strain optimization in practice.....	33
5	MATERIALS AND METHODS.....	34
5.1	Organisms	34
5.2	Preparation of Spore Suspension of <i>A. niger</i> AB 1.13.....	35
5.3	Cultivation Medium	35
5.4	Continuous Cultivation Experiments	36
5.5	Sampling and Sample Processing	37
5.6	Analytical Methods.....	37
5.6.1	Biomass dry weight	37
5.6.2	Off-gas analysis	37
5.6.3	Protein quantification	38
5.6.4	Quantification of sugars, organic acids and polyols.....	38
5.6.5	Enzyme assays.....	38
5.6.5.1	Glucoamylase assay	39
5.6.5.2	Glucose 6-phosphate dehydrogenase	39
5.6.5.3	Pyruvate Kinase	41
5.7	Metabolic network construction	43
5.7.1	<i>Aspergillus niger</i>	43
5.7.2	Example network of TCA cycle and supporting pathways.....	43
5.7.3	Metabolic networks of alternative organisms	43
5.8	Computational Methods	47
5.8.1	Calculation of elementary flux modes.....	47
5.8.2	Analysis of elementary modes.....	47

5.8.2.1	Calculation of maximum theoretical yield	47
5.8.2.2	Identification of target potential based on flux correlation	48
5.8.2.3	Statistical evaluation of genetic targets	49
5.8.3	Metabolic flux analysis with over-determined systems	51
6	RESULTS AND DISCUSSION.....	52
6.1	Large-scale Metabolic Network Model of <i>Aspergillus niger</i>.....	52
6.1.1	Anabolism and biomass formation.....	54
6.1.2	Target protein production.....	55
6.1.3	Validation of the large-scale network of <i>A. niger</i>	56
6.2	Prediction of Enzyme Production and Optimal Pathways.....	57
6.2.1	Fructofuranosidase production on glucose.....	57
6.2.1.1	Maximum theoretical yield	57
6.2.1.2	Optimal pathways	59
6.2.2	Impact of alternative carbon and nitrogen sources.....	60
6.3	Target Identification Based on Flux Correlation	63
6.3.1	Small example network of <i>Escherichia coli</i>	63
6.3.2	Structural analysis for the identification of genetic targets.....	67
6.3.3	Influence of nitrogen sources on fructofuranosidase production	70
6.4	Elementary Flux Mode Analysis for Production of Different Target Products	74
6.4.1	Optimal pathways.....	75
6.4.2	Identification of genetic targets based on flux correlation	77
6.4.3	Effect of glycosylation degree on product formation.....	79
6.5	<i>In silico</i> Evaluation of other Industrial Production Hosts.....	81
6.5.1	Maximal theoretical yield for epoxide hydrolase.....	81
6.5.2	Optimal pathways for Epoxide Hydrolase production	82
6.5.3	Amino acid production.....	84
6.6	Experimental Evidence for Targets predicted by Flux Correlation.....	86
6.6.1	Metabolic fluxes during glucoamylase production in <i>A. niger</i>	86
6.6.2	Enzyme activities depending on biomass and glucoamylase production.....	87
6.6.3	Resume of experimental validations in <i>Aspergillus niger</i>	88
6.6.4	Lysine production with <i>Corynebacterium glutamicum</i>	89

6.6.4.1	Maximum production performance using glucose as carbon source.....	89
6.6.4.2	Prediction of amplification and deletion targets.....	91
7	CONCLUSIONS AND FUTURE PERSPECTIVES	93
8	LIST OF SYMBOLS.....	96
8.1	Abbreviations.....	96
8.2	Latin Symbols	98
8.3	Greek Symbols.....	99
8.4	List of Indices.....	99
9	LIST OF REFERENCES	100
10	APPENDIX	113
10.1	Metabolic Networks.....	113
10.1.1	<i>Aspergillus niger</i> metabolic network.....	113
10.1.2	Small example network of TCA cycle and supporting pathways	123
10.1.3	<i>Escherichia coli</i> metabolic network	124
10.1.4	<i>Saccharomyces cerevisiae</i> metabolic network	126
10.1.5	<i>Corynebacterium glutamicum</i> metabolic network	128
10.1.6	<i>Bacillus subtilis</i> metabolic network.....	130
10.2	Composition of Target Proteins	132
10.3	Estimation of Measurement Errors.....	133
10.4	Optimal Flux Distribution for Fructofuranosidase Production.....	136
10.5	Optimal Pathway Fluxes for Alternative Target Products.....	140
10.6	Optimal Pathways for Epoxide Hydrolase Production.....	143
10.7	Metabolic Flux Analysis – Example.....	146
10.7.1	Description of the metabolic network	146
10.7.2	Metabolite balances and matrix notation.....	146

10.7.3	Matrix conversion.....	147
10.8	Computational Algorithm	148
10.8.1	Elementary flux modes.....	148
10.9	Algorithm of Post-processing	148
10.9.1	Calculation of theoretical flux yields	149
10.10	Statistical Evaluation	150
