

Table of contents

1	Introduction	1
1.1	Background and motivation	1
1.2	UPSPs in abandoned mines: concepts, development status, and redevelopment pathways	6
1.2.1	Types and working principle of UPSPs.....	6
1.2.2	Feasibility studies and pilot projects	8
1.2.3	Integrated redevelopment pathways of abandoned mines for energy storage.....	11
1.3	Key research issues in UPSP implementation.....	13
1.3.1	Site selection under uncertain mine conditions.....	13
1.3.2	Mine-specific scheme design and operating strategy.....	16
1.3.3	Stability of key hydraulic structures.....	18
1.4	Research gaps and objectives.....	21
1.5	Thesis outline	23
2	TIFN-based two-step MCDM framework for UPSP site selection in abandoned mines.....	26
2.1	Establishment of site-selection criteria system for UPSPs.....	27
2.1.1	Identification and refinement of candidate criteria	28
2.1.2	Screening criteria for preliminary feasibility assessment.....	30
2.1.3	Comprehensive evaluation criteria system.....	33
2.2	Representation of uncertain qualitative information using TIFNs.....	36
2.2.1	Rationale for introducing TIFNs in UPSP site selection.....	36
2.2.2	Basic operations, normalisation and defuzzification of TIFNs.....	37
2.3	Development of integrated decision model in TIFN-based fuzzy environment	39

2.3.1 Construction of expert decision matrices and TIFN quantification of linguistic assessments.....	40
2.3.2 Combined criterion weighting using AHP, EWM and the Lagrange multiplier method.....	41
2.3.3 Consensus-based expert weighting	46
2.3.4 Ranking of alternatives through VIKOR integrated with TIFNs	47
2.4 Two-step decision-making framework for UPSP site selection	50
2.5 Summary	53
3 Case study of proposed UPSP site-selection framework: seven underground mines in Yunnan Province, China	55
3.1 Study area and candidate mine selection.....	55
3.2 Implementation of proposed two-step site-selection framework	57
3.2.1 Preliminary screening of candidate mines.....	57
3.2.2 Comprehensive evaluation of shortlisted alternatives.....	60
3.3 Robustness and comparative validation of ranking results	66
3.3.1 Sensitivity analysis of VIKOR parameter and criterion weights	66
3.3.2 Cross-method comparison with fuzzy TOPSIS and fuzzy TODIM.....	69
3.4 Summary	72
4 Preliminary design of integrated hydropower–UPSP scheme for Dahongshan Iron Mine	73
4.1 Engineering background of Dahongshan Iron Mine	73
4.1.1 Geological and hydrogeological conditions of mining area.....	76
4.1.2 Mining method and current mining status.....	78
4.2 Diversion hydropower plant proposal for Dahongshan Iron Mine	80
4.2.1 Topographic characteristics of mining area.....	81

4.2.2 Conceptual layout of diversion hydropower plant	83
4.2.3 Hydraulic design of headrace canal and penstock.....	94
4.3 Preliminary UPSP proposal for Dahongshan Iron Mine	107
4.3.1 Selection of upper and lower reservoirs	108
4.3.2 Estimation of energy storage performance of Dahongshan Iron Mine UPSP112	
4.3.3 Post-mining installed-capacity potential	115
4.4 Seasonal operating strategy of integrated hydropower–UPSP scheme.....	116
4.4.1 Rainy season operation in diversion hydropower mode	117
4.4.2 Dry season operation in underground pumped-storage mode.....	118
4.4.3 Technical significance of seasonal hybrid mode	120
4.5 Summary	120
5 Numerical investigation of excavation- and operation-induced mechanical responses of proposed penstock shaft	123
5.1 Engineering background and modelling domain.....	123
5.2 Development of numerical model	126
5.2.1 Material parameters and constitutive models.....	126
5.2.2 In-situ stress initialisation and modelling assumptions.....	127
5.2.3 Model geometry, boundary conditions, and staged calculation procedure ..	128
5.3 Excavation-induced mechanical response of proposed penstock shaft.....	130
5.3.1 Analysis of displacement response.....	130
5.3.2 Analysis of stress redistribution	132
5.3.3 Development of plastic zone	135
5.4 Mechanical response under operational internal water pressure.....	136

5.4.1 Stress response of steel penstock and annular concrete backfill	137
5.4.2 Surrounding rock response under internal water pressure	139
5.5 Summary	141
6 Conclusions and outlook	143
