|---------------------------------------------------------------------------------|------------|
| <b>Kurzfassung</b>                                                              | <b>III</b> |
| <b>Abstract</b>                                                                 | <b>V</b>   |
| <b>1 Introduction</b>                                                           | <b>1</b>   |
| 1.1 Motivation . . . . .                                                        | 1          |
| 1.1.1 Global Research Status of 6G . . . . .                                    | 1          |
| 1.1.2 Integrated Sensing and Communications in Transportation Systems . . . . . | 2          |
| 1.1.3 Open Research Problems and Focus of This Work . . . . .                   | 3          |
| 1.2 State of the Art . . . . .                                                  | 4          |
| 1.2.1 Waveform Design . . . . .                                                 | 4          |
| 1.2.2 MIMO and Beamforming Design . . . . .                                     | 5          |
| 1.2.3 Radar Range-Doppler-Angle Estimation . . . . .                            | 6          |
| 1.3 Contributions and Structure . . . . .                                       | 8          |
| <b>2 Fundamentals of PMCW</b>                                                   | <b>13</b>  |
| 2.1 Pseudo-Random Noise Sequence . . . . .                                      | 13         |
| 2.2 Transmitter and Signal Structure . . . . .                                  | 14         |
| 2.3 Communication Receiver . . . . .                                            | 16         |
| 2.3.1 Channel Estimation . . . . .                                              | 16         |
| 2.3.2 Data Detection . . . . .                                                  | 17         |
| 2.4 Radar Receiver - Basic Scheme . . . . .                                     | 17         |
| 2.5 Radar System - Improved Scheme . . . . .                                    | 21         |
| 2.5.1 Sinc Impulse . . . . .                                                    | 22         |
| 2.5.2 Improved Receiver Architecture . . . . .                                  | 24         |
| 2.5.3 Window Functions . . . . .                                                | 27         |
| 2.6 Parameterization and Limitations . . . . .                                  | 30         |
| 2.6.1 Communication Capability . . . . .                                        | 30         |
| 2.6.2 Radar Parameterization . . . . .                                          | 32         |
| 2.7 MIMO ISAC System . . . . .                                                  | 33         |
| 2.7.1 Transmitter . . . . .                                                     | 34         |
| 2.7.2 Communication Receiver . . . . .                                          | 34         |
| 2.7.3 Radar Receiver . . . . .                                                  | 36         |
| 2.7.4 Parameterization . . . . .                                                | 43         |
| <b>3 Code-Orthogonal PMCW</b>                                                   | <b>45</b>  |
| 3.1 System Architecture . . . . .                                               | 45         |
| 3.1.1 Transmitter: Parallel Transmission Scheme . . . . .                       | 45         |

|          |                                                                                      |            |
