Kurzfassung	I
Abstract	III
1 Introduction	1
1.1 Background and Motivation	1
1.1.1 6G and Future Wireless Systems	1
1.1.2 Integrated Sensing and Communication	1
1.1.3 Beamforming in Multi-Input Multi-Output Systems	2
1.2 State of the Art	4
1.2.1 HBF for mmWave MIMO Systems	4
1.2.2 HBF for ISAC	4
1.2.3 Direction of Arrival in ISAC	5
1.2.4 BF under HW Constraints	6
1.3 Contributions and Structure	7
1.3.1 Open Research Problems and Focus of This thesis	7
1.3.2 Main Contributions	8
2 System Model	13
2.1 System Overview	13
2.2 Array and BF Fundamentals	14
2.2.1 Antenna Array and Array Response Vector	14
2.2.2 Digital, Analog, and Hybrid BF	16
2.3 MIMO-OFDM Signal Model	18
2.3.1 OFDM Waveform	18
2.3.2 Transmitted Signal Model	19
2.4 Channel Model	19
2.4.1 Communication Channel Model	19
2.4.2 Radar Channel Model	20
2.5 RX Model	21
2.5.1 Communication RX	21
2.5.2 Radar RX	21
2.5.3 Range Doppler Processing	22
2.6 Performance Metrics and BF Representation	24
2.6.1 Communication Performance Metrics	24
2.6.2 BF Gain Representation	26

3	HBF Design for Ideal MU ISAC System	27
3.1	HBF Design for ISAC TX	28
3.1.1	Problem Formulation	29
3.1.2	Solution via IPM	30
3.1.3	Initialization Strategy	33
3.1.4	Constraint Discussion	34
3.2	HBF Design for Communication RX	34
3.2.1	Problem Formulation	34
3.2.2	Solution via Block-OMP with ADSR	35
3.3	Radar RX: DoA Estimation	38
3.4	Computational Complexity Analysis	39
3.5	Experimental Performance Analysis	41
3.5.1	Simulation Setup	41
3.5.2	Convergence Behavior of the TX Optimization	42
3.5.3	Trade-off Between Sensing and Communication Performance	43
3.5.4	Communication Performance	45
3.5.5	Radar Sensing Performance	49
3.6	Summary and Discussion	51
4	HW Non-Idealities in HBF Systems	53
4.1	Physical-Layer Validation and Motivation	54
4.2	PA Non-Idealities	55
4.2.1	Role of PA Non-Idealities in HBF Systems	55
4.2.2	PA Modeling and Operating Characteristics	56
4.2.3	Impact of PA Nonlinearities on HBF	59
4.2.4	PA-Aware HBF Design	61
4.2.5	Frequency-Selective PA Response Compensation	64
4.2.6	Performance	65
4.2.7	Summary and Discussion	77
4.3	Finite-Resolution Phase Shifters	77
4.3.1	Motivation	77
4.3.2	Quantization-Aware Design	78
4.3.3	Results and Discussion	78
4.4	Mutual Coupling in Antenna Arrays	79
4.4.1	Motivation	79
4.4.2	Mutual Coupling	80
4.4.3	Coupling-Aware Signal Model	80
4.4.4	Coupling-Aware BF Design	81
4.4.5	Results and Discussion	82
4.5	Summary of HW Non-Idealities	84
5	FPGA-based Implementation and Hardware (HW)-Algorithm Co-Design of HBF	85
5.1	System Architecture	86
5.1.1	Overview of the HBF Algorithm	86
5.1.2	Task Partitioning for HW Acceleration	87
5.2	Quantization-Aware Optimization	88

5.3	FPGA-Oriented Implementation	89
5.3.1	Fundamental HW Building Blocks	89
5.3.2	Parallel Projection Architectures and Selection Integration	92
5.4	HW Performance Evaluation	94
5.4.1	Quantization Impact on Beam Selection Accuracy	95
5.4.2	Pipeline and Timing Characterization of Basic Blocks	96
5.5	Summary and Discussion	101
6	Discussion and Outlook	103
6.1	Comparison with State of the Art	103
6.2	Outlook	105
7	Summary	107
	Bibliography	111
	Abbreviations	119
	List of symbols	121
	Tables and Figures	125
	Acknowledgments	129
	Own Publications	131
