Table of contents

ABSTRACT.....	I
ZUSAMMENFASSUNG	II
Table of contents.....	III
Abbreviations and Acronyms	VII
1 Introduction.....	1
1.1 Phylogenetic and physiologic analysis of sucrose transporters in plants	1
1.1.1 Phylogenetic analysis of sucrose transporters in plant kingdom	1
1.1.2 Sucrose transporters in solanaceous plants	3
1.2 phloem mobile mRNAs and proteins.....	6
1.2.1 Phloem mobile mRNAs	7
1.2.2 Phloem mobile proteins	9
1.3 mRNA stability and RNA-binding proteins	11
1.3.1 Determinants of mRNA stability.....	11
1.3.2 The role of stresses in regulating mRNA stability.....	12
1.3.3 RNA-binding proteins in plants	13
1.4 Light dependent shade avoidance responses in plants.....	14
1.5 Methods to investigate protein-protein or RNA-protein interactions	16
1.5.1 The split-ubiquitin membrane yeast two-hybrid assay identify protein interaction partner in a unbiased manner	16
1.5.2 BiFC system serves as an efficient technique for identification of protein-protein interaction partners.....	17
1.5.3 Co-immunoprecipitation and tandem affinity purification techniques	18
1.5.4 Yeast three-hybrid assay to identify RNA binding proteins.....	18
1.6 The goals of the study	20
2 Materials and methods	21
2.1 Materials	21
2.1.1 Chemicals and enzymes.....	21
2.1.1.1 Chemicals.....	21
2.1.1.2 Enzymes and antibodies.....	21
2.1.2 Bacterial Strains	22
2.1.3 Yeast strain.....	22
2.1.4 cDNA library	22
2.1.5 Plant materials.....	22
2.1.6 Vectors	23
2.1.7 Oligonucleotide sequences used in this thesis	24
2.2 Media and solutions	26
2.2.1 Media for bacteria.....	26
2.2.2 Media for yeast	26
2.2.3 Solutions for mini preparation of plasmid DNA.....	27
2.2.4 Buffers for plasma membrane fraction isolation	27
2.2.5 Solutions for Western Blot.....	28
2.2.6 RNase A stock solution.....	29
2.3 Basic molecular biological methods	29
2.3.1 Standard methods.....	29
2.3.2 Transformation of potato	29
2.3.3 Plant growth conditions and tissue culture	29
2.3.4 Greenhouse and artificial shade condition.....	30

2.3.5	Genomic DNA isolation	30
2.3.6	RNA isolation and reverse transcription.....	31
2.3.7	RNA Quantification by real-time RT-PCR.....	31
2.3.8	Northern blot.....	32
2.3.9	Protein extraction and detection.....	32
2.3.9.1	Protein purification from SISUT4 tobacco	32
2.3.9.2	Microsomal fraction isolation	32
2.3.9.3	Plasma membrane fraction isolation	33
2.3.9.4	BCA protein assay (Thermo Scientific).....	33
2.3.9.5	Western blot	34
2.3.10	BiFC in living tobacco cells.....	34
2.4	Yeast related experiments	35
2.4.1	Prediction of StSUT4 RNA structures	35
2.4.2	The construct of hybrid RNA molecule.....	35
2.4.3	Construct of cDNA library.....	36
2.4.4	Outline of working route of yeast three-hybrid assay.....	37
2.4.5	X-gal analysis of interaction clones.....	39
2.4.6	Reduce non-specific transactivation of the <i>HIS3</i> reporter gene.....	39
2.4.7	Small scale yeast transformation	40
2.4.8	Large scale yeast transformation	40
2.4.9	Isolation of plasmid DNA from yeast cells.....	41
2.5	Regulation of half life of sucrose transporter mRNAs	42
2.5.1	Influences on SUT4 under far-red light enrichment	42
2.5.2	Inhibitor studies and feeding experiments	42
2.6	Physiological analysis of transgenic potato and tobacco plants	42
2.6.1	Real-time monitoring of ethylene (ET) production	42
2.6.2	<i>In vitro</i> pollen germination assay.....	43
2.6.3	Pollen viability assay	43
2.6.4	Soluble sugar content and starch measurement	44
2.7	DNA sequencing.....	44
2.8	Phylogenetic analysis software	44
3.	Results.....	47
3.1	Sucrose transporter mRNA's phloem mobility.....	47
3.1.1	The phloem mobility of <i>StSUT1</i> and <i>NtSUT1</i> mRNAs demonstrated in <i>Cuscuta reflexa</i>	48
3.1.2	<i>SoSUT1-cmyc</i> and <i>SISUT1-GUS</i> mRNA phloem mobility in graft experiments	48
3.2	Sucrose transporter mRNA stability	50
3.2.1	Short half life of sucrose transporter mRNAs.....	51
3.2.2	SUT1 expression is regulated at the transcriptional level.....	52
3.2.3	<i>StSUT2</i> and <i>StSUT4</i> expression is regulated post-transcriptionally	54
3.3	Analysis of StSUT2&StSUT4-RNAi potato plants.....	56
3.3.1	Confirmation of transformation	57
3.3.2	The expression level of <i>StSUT4</i> and <i>StSUT2</i> in <i>StSUT2&StSUT4-RNAi</i> potato lines	59
3.3.3	Analysis of <i>StSUT2</i> and <i>StSUT4-RNAi</i> potato plants	61
3.3.3.1	Flowering time	61
3.3.3.2	Pollen germination and viability	63

3.3.3.3	Tuber yield of transgenic <i>StSUT2&StSUT4-RNAi</i> potato plants	66
3.3.3.4	Tuber dormancy and sprouting	68
3.4	SUT4 over-expression in tobacco plants	69
3.4.1	Confirmation of tobacco transformation.....	70
3.4.1.1	Recombinant pN-TAPa SISUT4 construct	70
3.4.1.2	Confirmation of successful transformation.....	70
3.4.2	<i>SISUT4</i> mRNA accumulation in N-TAPa <i>SISUT4</i> 02 tobacco	71
3.4.3	SISUT4 protein level in N-TAPa SISUT4 tobacco.....	72
3.4.4	Phenotypes of N-TAPa SISUT4 tobacco plants	74
3.4.5	SUT4 in solanaceous plants is a plasma membrane protein	78
3.5	The effects on genes involved in flower induction and tuberization in StSUT4-RNAi potato plants	79
3.5.1	StSUT4 accumulation was induced under FR light enrichment.....	80
3.5.2	Increased StSUT4 mRNA accumulation was caused by prolonged half life of transcripts under FR enrichment	81
3.5.3	Far-red light affects <i>StSUT4</i> and <i>StJAR1</i> accumulation	82
3.5.4	The expression of <i>GIGANTEA (GI)</i> in <i>StSUT4-RNAi</i> potato plants.....	84
3.5.5	The expression of different flowering genes in <i>StSUT4-RNAi</i> potato plants under SD condition.....	85
3.6	Confirmation of SUT4 protein-protein interaction partners	87
3.6.1	The confirmation of protein disulfide isomerase (PDI) interacting with SUT4 protein.....	88
3.6.2	Physiological evidence for the interaction between the sucrose transporter StSUT4 with a putative ethylene receptor protein.....	89
3.6.2.1	Co-localization of ETR1 and SUT4 in the ER.....	90
3.6.2.2	SUT4 expression in tobacco is inducible by ethylene	90
3.6.2.3	The impact of StSUT4 inhibition on ethylene production.....	91
3.7	Screen for StSUT4 RNA-binding proteins using yeast three-hybrid system .	92
3.7.1	Establishment of the yeast three-hybrid system.....	93
3.7.1.1	Construction of bait vectors	93
3.7.1.2	Subcloning of <i>StSUT4</i> and <i>StSUT4 3'UTR</i>	93
3.7.1.3	Control experiments.....	94
3.7.2	Large scale screening.....	95
3.7.3	Confirmation of interactions	96
3.7.4	Elimination of false positives from the screen.....	96
3.7.5	Further analyses to eliminate false positives	97
3.7.5.1	The putative RNA-binding protein	98
3.7.5.2	Confirmation of the RNA-binding activity of putative interaction partner in yeast.....	98
4	Discussion	101
4.1	The SUT1 mRNAs are phloem mobile in solanaceous plants.....	101
4.2	Regulation mechanisms of sucrose transporter mRNA stability	103
4.2.1	The determination of half-life of sucrose transporter mRNAs is important.....	103
4.2.2	Different regulations of sucrose transporter mRNAs stability	104
4.3	The physiological functions of SUT4	106
4.3.1	Localization of SUT4 in solanaceous plant cells.....	106
4.3.2	SUT4 affects sucrose efflux from source leaves.....	106

4.3.3 StSUT4 is involved in shade avoidance responses	107
4.3.4 SUT4 serves as an component in potato flowering and tuberization pathways	109
4.4 The role of StSUT2 in potato plants	111
4.5 Regulation of sucrose transporter protein stability and localization.....	112
4.5.1 PDI might be involved in protein folding and localization of sucrose transporters.....	112
4.5.2 SUT4 is involved in ethylene signaling pathway through interaction with ETR, an ethylene receptor	113
4.6 Yeast three-hybrid system for identification of RNA-protein interactions ..	114
4.6.1 Hybrid RNA (Bait vectors).....	114
4.6.2 Differences of VP16 and Gal4 activation domain	115
4.6.3 Identification of sequence specific RNA binding proteins	116
4.6.4 Limitations of yeast three-hybrid assay	117
5 Conclusion	121
6 Appendix.....	123
6.1 Map of vectors used in this study	123
6.2 Secondary structure of different length of StSUT4 mRNAs	125
7 References.....	129
8 Acknowledgement	145
Publication	147
