Contents	vii
Introduction	1
1 Notation and Tools	5
1.1 The Basics	5
1.1.1 Linear Extensions	7
1.1.2 Special Classes of Posets	8
1.2 Poset Dimension	9
1.3 Partial Cubes	13
1.4 Modular Decomposition	17
2 Properties of Linear Extension Graphs	23
2.1 Context and Previous Results	24
2.2 Color Classes	29
2.3 Adjacent Swap Colors	35
2.4 The Linear Extension Graph as an Invariant	40
3 Reconstructing Posets from Linear Extension Graphs	43
3.1 Answering Admissible Questions	45
3.2 Checking Adjacency of Swap Colors	47
3.3 Reconstructing the Comparability Graph	48
3.4 Orienting the Comparability Graph	51
3.4.1 The Parallel Case	54
3.4.2 The Series Case	54
3.4.3 The Prime Case	55
3.4.4 The Exceptional Case	57

3.5	Putting Things Together	57
3.6	Recognizing Linear Extension Graphs	58
3.6.1	Constructing a Candidate Poset	58
3.6.2	Finding a Start	60
3.6.3	Labeling Vertices with Linear Extensions	61
4	Complexity of Linear Extension Diameter	63
4.1	Previous Results	64
4.2	NP-Completeness for General Posets	67
4.3	Algorithm for Posets of Width 3	73
5	Linear Extension Diameter of Distributive Lattices	77
5.1	Boolean Lattices	78
5.1.1	Revlex Linear Extensions	78
5.1.2	Determining the Linear Extension Diameter	80
5.1.3	Characterizing Diametral Pairs	83
5.2	Downset Lattices of 2-Dimensional Posets	85
5.2.1	Revlex Pairs are Diametral Pairs	86
5.2.2	Diametral Pairs are Revlex Pairs	91
5.2.3	Computing the Linear Extension Diameter	94
5.3	Open Questions	100
6	Diametrically Reversing Posets	101
6.1	Not all Posets are Diametrically Reversing	103
6.2	Most Posets are Diametrically Reversing	107
6.2.1	Modules	107
6.2.2	Interval Orders	108
6.2.3	3-Layer Posets	112
	Bibliography	115
	Index	121
