Acknowledgments	v
Abstract	vii
CHAPTER 1	1
Introduction	
1.1 Overview	1
1.2 Organization of the thesis	5
CHAPTER 2	9
Nonlinear distortions in active devices	9
2.1 Linearity figure of merit for active devices	9
2.2 Distortion in active devices	10
2.3 IMD characterization of devices	15
2.4 Comparison of devices in terms of linearity	20
CHAPTER 3	23
GaN HEMT	23
3.1 Basic HEMT operation	15
3.2 GaN material properties	23
3.3 GaN HEMT device fabrication	24
3.3.1 Substrate	24
3.3.2 Basic GaN process technology at FBH	25
3.4 Packaging	28

CHAPTER 4	31
Measurement and characterization	
4.1 Intermodulation test setup	31
4.1.1 The input amplifier	35
4.1.2 Bias-T	
4.2 Power calibration	37
4.3 Fixture	37
4.4 Measurements	39
4.5 Measurement safety	41
4.5.1 Drain safety using e-fuse	42
4.5.2 Self pinching bias-T to avoid gate turn-on and spurious oscillation	47
CHAPTER 5	57
IMD sources in GaN HEMT	
5.1 Sensitivity analysis based on large signal model	57
5.2 Measurement based analysis	69
5.2.1 SiN undoped cap	69
5.2.2 GaN cap doped with silicon	71
5.3.3 AlGaN barrier height	73
5.3.4 T-Gate and embedded gate	73
5.3.5 Field plate variation	75
5.3.6 Drain source capacitance variation	77
5.3 Access resistance related nonlinearity	79
5.3.1 Influence of gate source spacing	84
CHAPTER 6	92
Device Level Linearity of GaN HEMT	87
6.1 Linking systematic and sensitivity analyses to physical simulation	87
6.2 Influence of barrier thickness	92
6.3.1 Theory and simulation	92
6.3.2 Fabrication, measurements & discussion	95
6.3 Enhancing overall linearity of a large device	99
6.4 Enhancing linearity at low back-off regime	103
6.4.1 Simulation and analysis	104

CHAPTER 7	109
GaN HEMT as Linear Amplifier	
7.1 Class-A, B and AB	109
7.2 GaN HEMT based linear PA design	110
7.3 Performance of GaN HEMT	112
7.3.1 Power performance	113
7.3.2 Noise performance	114
7.3.3 Linearity performance	117
CONCLUSIONS	119
References	125
List of acronyms	131
Appendix-I	133
Appendix-II	135
Publication and patent	137
