

INDEX

Abbreviations

I. Introduction	1
1. Abiotic stress	1
1.1. Cold stress in plants	1
2. Raffinose family oligosaccharides (RFOs)	6
2.1. RFO biosynthesis in <i>Ajuga reptans</i>	7
2.2. <i>Ajuga reptans</i> is an RFO specialist.....	8
2.3. RFOs are compatible solutes	9
2.4. RFOs are phloem sugars.....	10
2.5. Carbohydrate metabolism in roots.....	12
2.6. Carbohydrate storage	14
3. Starch is the most prominent insoluble storage carbohydrate	15
3.1. Transitory starch biosynthesis in Arabidopsis.....	16
3.2. Transitory starch degradation in Arabidopsis.....	17
4. Maltose	20
4.1. Apart from amylolytic origin of Malt, <i>de novo</i> Malt synthesis has been observed in leaves.....	20
4.2. Malt increases transiently in cold and heat treated Arabidopsis leaves	21
4.3. <i>Arabidopsis thaliana</i> is a model organism in plant research	22
5. The Chloroplast	23
5.1. The chloroplast needs to be protected against abiotic stresses	23
5.2. Transport across the chloroplast envelope membranes	23
5.3. Identification of novel chloroplastic carbohydrate transporter (CarbT) genes in Arabidopsis by Schneider (2006)	26
6. Aims of the thesis.....	27
II. Materials and Methods	29
1. Materials	29
1.1. Chemicals.....	29
1.2. Yeast strains and plasmids.....	29
1.3. Oligonucleotides	29
2. Plant material and plant growing conditions.....	30
2.1. <i>Ajuga reptans</i>	30
2.2. <i>Arabidopsis thaliana</i>	30
3. Extraction and analysis of soluble carbohydrates	31
3.1. Extraction of soluble carbohydrates using the cryo sap method.....	31
3.2. Desalting of carbohydrate samples by French column centrifugation.....	31
3.3. HPLC-PAD analysis.....	32
3.4. Identification and quantification of carbohydrates.....	32
4. Enzymatic activity measurements.....	33
4.1. Crude enzyme extraction.....	33
4.2. Desalting of enzyme extracts.....	33
4.3. Enzyme Assays	33
5. Semi-quantitative PCR.....	36
5.1. Total RNA extraction of hairy root culture samples and hydroponic roots.....	36
5.2. Quantification of RNA	36

5.3.	First strand cDNA-synthesis	36
5.4.	Second strand synthesis.....	36
6.	Biochemical characterization of MaltS	37
6.1.	pH-Dependence.....	37
6.2.	Time dependence	37
6.3.	Concentration dependence.....	37
6.4.	Temperature dependence	37
6.5.	Substrate specificity.....	37
6.6.	Effects of addition of putative inhibitors	38
6.7.	Compartmentation	38
7.	Purification of MaltS	41
7.1.	Protein quantification	41
7.2.	PEG precipitation.....	41
7.3.	Anion-exchange chromatography using High Q column.....	41
7.4.	Ultrafiltration with Vivaspin spin columns.....	42
7.5.	native PAGE	42
7.6.	SDS-PAGE	42
7.7.	Coomassie brilliant blue staining	43
7.8.	Tryptic <i>in gel</i> digestion of proteins	43
7.9.	ZipTip C18 sample clean up	43
7.10.	LC-MS/MS analysis	44
7.11.	DNA extraction of candidate T-DNA insertion lines	45
7.12.	PCR to test zygosity.....	45
8.	Transformation of <i>Saccharomyces cerevisiae</i>	46
8.1.	Preparation of competent cells	46
8.2.	Transformation of <i>S. cerevisiae</i> cells	46
8.3.	Plasmid rescue	46
8.4.	Isolation of microsomes from transformed <i>S. cerevisiae</i> cells	47
8.5.	Uptake assays with transformed <i>S. cerevisiae</i> microsomes	47
9.	Software.....	48
III.	Results.....	49
1.	RFO biosynthesis and accumulation is not only cold upregulated in leaves but also in hydroponic roots and hairy root cultures of <i>A. reptans</i>	49
1.1.	Hydroponic roots of <i>A. reptans</i>	51
1.2.	Hairy root cultures.....	54
1.3.	GolS-1 and GGT expression correlated positively with enzyme activity in hydroponic roots but not in hairy roots	57
1.4.	Growth is reduced in cold treated roots	59
1.5.	Cold treatment provokes an increase in both RFO concentrations and GGT activity in hydroponic leaves	59
2.	<i>De novo</i> maltose synthesis in Arabidopsis.....	61
2.1.	Maltose is <i>de novo</i> synthesized from glucose-1-phosphate as sole substrate.....	61
2.2.	Maltose <i>de novo</i> synthesis is widely distributed in the plant kingdom.....	61
2.3.	Biochemical characterization of MaltS in Arabidopsis Col-0	62
2.4.	MaltS is most probably a cytosolic enzyme	67
2.5.	Malt increases transiently in leaves of cold treated Arabidopsis.....	68
2.6.	MaltS activity is only slightly changed in leaves of cold treated Arabidopsis.....	69
2.7.	Mutants in starch metabolism showed both Malt accumulation and MaltS activity, with the exception of the mutant <i>pgm</i>	70

2.8.	<i>pgm</i> plants show the same changes in soluble carbohydrate concentrations upon cold treatment as Col-0 plants, except for Malt.....	71
2.9.	MaltS activity shows no diurnal pattern.....	72
2.10.	MaltS activity might be regulated by phosphorylation/dephosphorylation	73
2.11.	Purification of MaltS for LC-MS/MS analysis	74
3.	Characterization of the chloroplastic transporter CarbT6 in yeast cells	81
3.1.	Positively transformed yeast colonies were identified	81
3.2.	No CarbT6 specific Glc-uptake could be measured in transformed yeast cells.....	82
3.3.	No CarbT6 specific Glc-uptake could be measured in vesicles of transformed yeast cells.....	83
IV.	Discussion.....	85
1.	<i>A. reptans</i> roots	85
1.1.	RFO concentrations increase in leaves and roots of cold-treated <i>A. reptans</i> plants.....	85
1.2.	RFO concentrations increase in <i>A. reptans</i> hairy roots during cold treatment	88
1.3.	Conclusion.....	90
2.	Malt <i>de novo</i> synthesis in Arabidopsis.....	91
2.1.	MaltS activity seems to be widespread in the plant kingdom.....	91
2.2.	Biochemical characterization of Arabidopsis Col-0 MaltS showed high similarities to spinach MaltS.....	91
2.3.	The transient Malt increase in leaves of cold-treated Arabidopsis plants confirm earlier results.....	94
2.4.	Malt <i>de novo</i> synthesis is also found in Arabidopsis Col-0 leaves but showed different patterns if cold treatment was conducted during the light or dark phase	95
2.5.	Mutants in starch metabolism show the same Malt-related reactions except for <i>pgm</i> , showing no Malt accumulation in the cold.....	96
2.6.	MaltS activity may be diurnally regulated by phosphorylation and dephosphorylation	97
2.7.	Purification of MaltS.....	97
2.8.	Possible roles of MaltS	99
3.	No CarbT6-specific Glc-uptake could be measured in transformed yeast cells.....	100
4.	Outlook	101
V.	Summary	103
VI.	Zusammenfassung	105
VII.	References	107
VIII.	Appendix	119
