TABLE OF CONTENT

Acknowledgements..... i

Table of contents..... ii

1 **General introduction**..... 1

1.1 Tropical agroecosystems..... 1

1.2 Soil, microhabitat and microbial community..... 2

1.3 Plant residue quality and decomposition..... 3

1.4 Methods to study microbial community..... 3

1.5 Molecular techniques..... 4

1.6 DNA stable isotope probing..... 5

1.7 Objectives..... 6

1.8 Outline of the study..... 7

1.9 References..... 7

2 Technical considerations for the use of ^{15}N-DNA stable isotope probing for functional microbial activity in soils..... 12

2.1 Introduction..... 13

2.2 Materials and methods..... 14

2.2.1 Determination of quantities of DNA required for visualization..... 14

2.2.2 Preparation and separation of DNA from *Pseudomonas putida* cultured on media containing 0 to 99% ^{15}N enrichment..... 14

2.2.3 Preparation and collection of ^{15}N labelled DNA from soil samples.....15

2.3 Results and discussion..... 15

2.3.1 Visualization of DNA in CsCl..... 15

2.3.2 Separation of ^{14}/^{15}N labelled DNA.....16

2.3.3 ^{15}N isotopic DNA enrichment required.....17

2.3.4 Evaluation of an alternative approach to enhance separation of ^{14}/^{15}N-DNA bands..... 18

2.3.5 Verification of isotopic enrichment of heavy bands from soil

residue experiment. 19

2.4 Conclusions.....21

2.5 References.....21

3 Plant residue quality modifies activity and structure of soil microbial community in a tropical Vertisol 23

3.1 Introduction..... 24

3.2 Materials and methods..... 25

3.2.1 Experiment set up.....25

3.2.2 Microbial biomass, mineral N and soil respiration.....27

3.2.3 Enzymes activities and ergosterol content.....27

3.2.4 Soil DNA extraction and denaturing gradient gel electrophoresis (DGGE) analysis.....27

3.2.5 Statistic analysis.....28

3.3 Results..... 29

3.3.1 Activity of soil microbial community.....29

3.3.2 Community structure of the soil microbial population.....39

3.3.3 Relationship between microbial communities and biochemical quality of residues.....39

3.4 Discussion.....43

3.5 Conclusions.....45

3.6 References.....45

4 ^{15}N-DNA stable isotope probing to determine active bacteria involved in decomposition of residues with different quality.....51

4.1 Introduction.....53

4.2 Materials and methods..... 54

4.2.1 Preparation of residue material and incubation experiment.....54

4.2.2 Soil DNA extraction.....55

4.2.3 DNA- based stable isotope probing (SIP).....55

4.2.4 Denaturing gradient gel electrophoresis (DGGE) analysis.....56

4.2.5 Sequencing analysis.....57

4.3 Results.....57

4.3.1 ^{15}N-DNA stable isotope probing (SIP) gradient.....57

4.3.2 Community profiling of SIP fractions.....58

4.4 Discussion..... 63
4.5 Conclusions..... 65
4.6 References..... 66

5 ^{15}N-DNA stable isotope probing protocol to identify *active* soil fungi involved in plant residues decomposition.....70

5.1 Introduction.....71
5.2 Materials and methods.....72
5.2.1 Incubation experiment and DNA stable isotope probing.....72
5.2.2 Fungal analysis.....72
5.2.3 Sequencing analysis.....73
5.3 Results.....74
5.3.1 Community profiling of the whole soil DNA.....74
5.3.2 Community profiling of SIP fractions.....74
5.3.3 Active fungal community.....74
5.4 Discussion.....77
5.4.1 ^{15}N DNA SIP protocol for *active* decomposer fungi.....77
5.4.2 Fungi associated with residues of diferents quality.....77
5.4.3 *Active* fungi involved in residue decomposition.....78
5.5 Conclusions.....79
5.6 References.....79

6 General discussion.....82
6.1 ^{15}N-DNA-based stable isotope probing technique as a new tool to identify soil microbial community actively involve in plant residue decomposition process.....82
6.2 ^{15}N-DNA-based SIP to identify stimulated and pre-existent community.....83
6.3 Contribution of different active soil microbial communities to the decomposition of plant residues.....84
6.4 Plant residue quality as determinant factor in the composition of active decomposing microbiota..... 84
6.5 Recommendations..... 85
6.6 References.....86

7 **Summary**..... 88

8 Zusammenfassung.....91

9 Resumen.....95

Curriculum Vitae..... 99
