Zusammenfassung	i
Abstract.....	iii
Dedication.....	v
Acknowledgements	vii
Table of contents	ix
List of Figures	xi
List of Tables	xv
List of Media and Reagents.....	xvi
1 Introduction and Objective of Work.....	1
2 Literature Review	8
2.1 Probiotic products	8
2.1.1 Definition of probiotics	8
2.1.2 Important factors for the development of probiotic cultures	8
2.1.2.1 Viability of Probiotic Organisms	9
2.1.3 Beneficial Effects of Probiotics.....	10
2.1.3.1 Antimicrobial Properties	11
2.1.3.2 Antimutagenic Properties.....	11
2.1.3.3 Anticarcinogenic Properties	12
2.1.3.4 Improvement in Lactose Metabolism	12
2.1.3.5 Reduction in Serum Cholesterol	12
2.2 Responses of Microorganisms to Environmental Stresses	13
2.2.1 General Introduction	13
2.2.1.1 Bacterial cell structure.....	14
2.2.2 Environmental stressful conditions	17
2.2.2.1 Osmotic Stress.....	17
2.2.2.1.1 Trehalose.....	19
2.2.2.1.2 Sucrose.....	21
2.2.2.2 Heat Stress	22
2.2.2.3 High Pressure	23
2.2.3 Flow Cytometry.....	25
2.2.3.1 Principles of the flow cytometer	26
2.2.3.2 Assessment of physiological attributes of microorganisms	27
2.2.3.2.1 Membrane integrity.....	28
2.2.3.2.2 Esterase activity.....	28
2.2.3.2.3 Pump Activity	29
2.2.3.2.4 Membrane Potential.....	30
2.3 Drying of Biological Products	31
2.3.1 Introduction.....	31
2.3.2 Protective Mechanisms of Sugars on Biological Materials during Drying	33
2.3.2.1 Membranes	33
2.3.2.2 Proteins.....	36
2.3.2.3 Intact Cells	37
2.3.3 Drying of Probiotic Bacteria	39
2.3.3.1 Introduction	39
2.3.3.1.1 Spray drying.....	39
2.3.3.1.2 Vacuum drying.....	41
3 Materials and Methods	44
3.1 Bacterial strains and growth conditions	44
3.2 Osmotic agents	44
3.3 Media.....	44
3.3.1 Methods of preparation of media	44
3.4 Plate enumeration method	45
3.5 Physical treatments.....	45
3.5.1 Screening for the sub-lethal and lethal Conditions.....	45
3.5.1.1 Osmotic Treatments.....	45
3.5.2 High Pressure Treatments.....	45
3.6 Characterization of stress responses.....	46
3.6.1 Response of Log-phase cultures to osmotic treatments	46
3.6.2 Assessment of osmotic pre-treated cells' response to lethal heat stress.....	46
3.6.3 Assessment of osmotic pre-treated cells' response to lethal osmotic stress.....	47
3.6.4 Assessment of osmotic pre-treated cells' response to bile stress.....	47

3.6.5	Assessment of pressure pre-treated cells' response to lethal heat stress	47
3.6.6	Electron Microscopy	48
3.7	Flowcytometry.	48
3.7.1	Stress Treatments.	48
3.7.2	Esterase activity and membrane integrity.	48
3.7.3	cF extrusion activity and kinetics of extrusion.	48
3.7.4	Flowcytometric Measurements	49
3.7.4.1	Data Analysis.	49
3.7.4.2	Statistical Analysis	50
3.8	Drying experiments	50
3.8.1	Vacuum Drying	50
3.8.1.1	Enumeration of probiotics after drying	50
3.8.1.2	Flow cytometric measurements of samples dried in vacuum-oven	51
3.8.1.3	Storage tests	52
3.8.1.4	Salt tolerance test	52
3.8.1.5	Screening of bacterial tolerances to acid, bile, lysozyme and pepsin	52
3.8.2	Spray drying.....	52
3.8.2.1	Preparation of samples	52
3.8.2.2	Heat challenge experiments.....	53
3.8.2.3	Drying process	53
3.8.2.4	Determination of moisture content in dried samples	55
3.8.2.5	Enumeration of probiotics after spray drying.....	55
3.8.2.6	Storage tests.....	56
3.8.2.7	Sensitivity tests	56
3.8.2.8	Flow cytometric measurements of spray- dried samples	56
3.8.3	Recovery rates.....	57
4	Results and Discussion	58
4.1	Effects of osmotic conditions of MRS- media on growth of bacterial strains	58
4.1.1	Osmotic strength of growth media	58
4.1.2	Sub- lethal and lethal concentrations of osmotic agents	59
4.2	Responses of exponential-phase cultures to osmotic stress induced by trehalose and sucrose	60
4.2.1	Impact of non-ionic pretreatments on the viability of strains subjected to selected environmental stresses	62
4.3	Fluorescence properties of control and osmotic-treated L. rhamnosus strains as indicated by cFDA/PI staining.....	69
4.3.1	Analysis of flow cytometric data	69
4.3.2	Membrane integrity and esterase activity of trehalose treated and control cells.....	70
4.3.3	Membrane Integrity and esterase activity of sucrose treated and control cells	72
4.4	Comparison of the viability status of cells' response to cFDA/PI labelling and standard culturability assay	75
4.4.1	Osmotic stress induction by sucrose	76
4.4.2	Osmotic stress induction by trehalose	77
4.5	Extrusion of intracellular accumulated dye in response to glucose addition	77
4.5.1	Extrusion activity in L. rhamnosus GG.....	78
4.5.2	Extrusion activity in L. rhamnosus E800.....	79
4.5.3	Kinetic measurements of cF-extrusion rates.....	81
4.6	Survival rates of probiotic cells after drying in vacuum oven	83
4.6.1	Cells in the Exponential phase.....	83
4.6.2	Cells in the Stationary phase	84
4.6.3	Flow cytometric analysis of bacteria dried under vacuum.....	86
4.6.4	Bacterial tolerances to lysozyme, pepsin, acid and bile.....	88
4.6.5	Probiotic survival rates in vacuum-dried trehalose during storage.....	89
4.7	Spray drying of probiotic bacteria	91
4.7.1	Thermal tolerance of probiotic strains.....	91
4.7.2	Survival rates during spray drying.....	92
4.7.3	Tolerance of cells to NaCl, lysozyme and simulated gastric juice.....	97
4.7.4	Flow cytometric analysis of spray-dried bacterial cells	98
4.7.5	Scanning Electron Microscopy of spray dried cells.....	101
4.7.6	Survival kinetics of spray-dried probiotics at non-refrigerated storage conditions.....	102
4.7.6.1	Effect of monosodium glutamate (MSG) on survival of spray-dried cells during storage	104
4.7.7	Stability of spray-dried L. rhamnosus GG in dairy beverage powder and apple juice	106
4.8	Influence of mild pressure pre-treatment on the thermotolerance of L. rhamnosus GG ...	110
5	Conclusion and Recommendation.....	112
	References	117
	Curriculum vitae.....	139
